

SIEMENS

DepotFinity:

Accelerate your transition to an eFleet – smart and effortlessly

Electrifying a depot is a systems challenge. Depot operators need reliable charging, smart energy use, and smooth daily operations – at low cost.

Reliable eFleet charging.
Intelligent energy use.
Lowest total cost of ownership.

Achieve lowest TCO with DepotFinity

DepotFinity is Siemens software for professional eFleet and depot charging that addresses the everyday challenges of depot operators. It helps ensure vehicle readiness, optimize energy usage, and reduce total cost of ownership for logistics fleets, bus depots, and other commercial operations. The software combines operational control, intelligent charging, and open integration in one scalable platform.

Lower operating costs with intelligent charging and remote control

Scale efficiently with adaptive load management and without overbuild

Reduce effort and costs through automation and efficient reporting

Save on energy and boost returns with day-ahead pricing and monetization

Built for professional depot operations and seamless integration

DepotFinity fits into complex depots and complements Siemens hardware and services from grid connection to vehicle departure. Open standards and scalable architecture help operators expand with confidence while keeping operations consistent.

DepotFinity features

- Interoperable with Siemens and third-party chargers via OCPP 1.6
- Open interfaces and standards-based integration, including VDV 463
- Designed for professional, scalable, and secure depot operations

Packages: From monitoring to full energy orchestration

Basic ★

Operate your depot reliably

- Visibility and controlled access across chargers and EV charging
- Remote control and operational monitoring
- Notifications and reporting for daily operations

Advanced ★★

Optimize infrastructure usage

- Smart charging and load managed depot operation
- Charging aligned with schedules, preconditioning, and priorities
- Seamless operation of shared depots

Premium ★★★

Optimize at scale

- Advanced energy and power optimization
- Dynamic load management and day-ahead optimization
- Dispatch-driven and telematics-based charging
