Introduction

This bulletin has been issued as a notification of the release of IC4 Version 15.4.4.

The following list details the main additional facilities that are included in this release. Many require the new ST950 46059 Issue 24 firmware.

- Support for the DVI35 facility.
- Enhanced Special Conditioning. (#define and 16-bit integer support etc)
- Support for I/O Count Logging.
- Switched Signs Page displays the associated 'Phase-Colour' Output.

It also resolves the following issues:

- Fixed error in translating ST700/ST750 configurations with 2 Audible/Tactile Drive Channels.
- Intelligent Detector backplanes are now listed in the IO Cards Item list.
- Opening a v15 config in v14 doesn't disable dimming now.
- Problem with Aspect Drive page for Chinese language is fixed
- Fixed problems with communications with controller via serial cable.
- Title for Options window is changed to "IC4 Options".
- Fix to prevent old configs opening on new DVI35 screens.
- Emulator window corrected for Additional Information.
- Fix for occasional random compiler errors.

Scope

IC4

Procedure

The IC4 Version15.4.4 package file is available for download from [Siemens Technical Downloads](#).

IC4 from version 15 onwards has also been modified to provide the functions of IC4 Lite (plus the use of the emulators) when the dongle is not present, which means only one package needs to be maintained.

So even though the full IC4 is now available to download from the website, only customers with dongles will be able to modify configuration files.

If you cannot access the internet from your IC4 machine, you can download the files on a separate machine, copy them to a USB Stick (for example) and then use that to install IC4.

Please note this version of IC4 only supports Win10. It does work with Win7 but that is no longer a supported OS.
