

| Customized Training

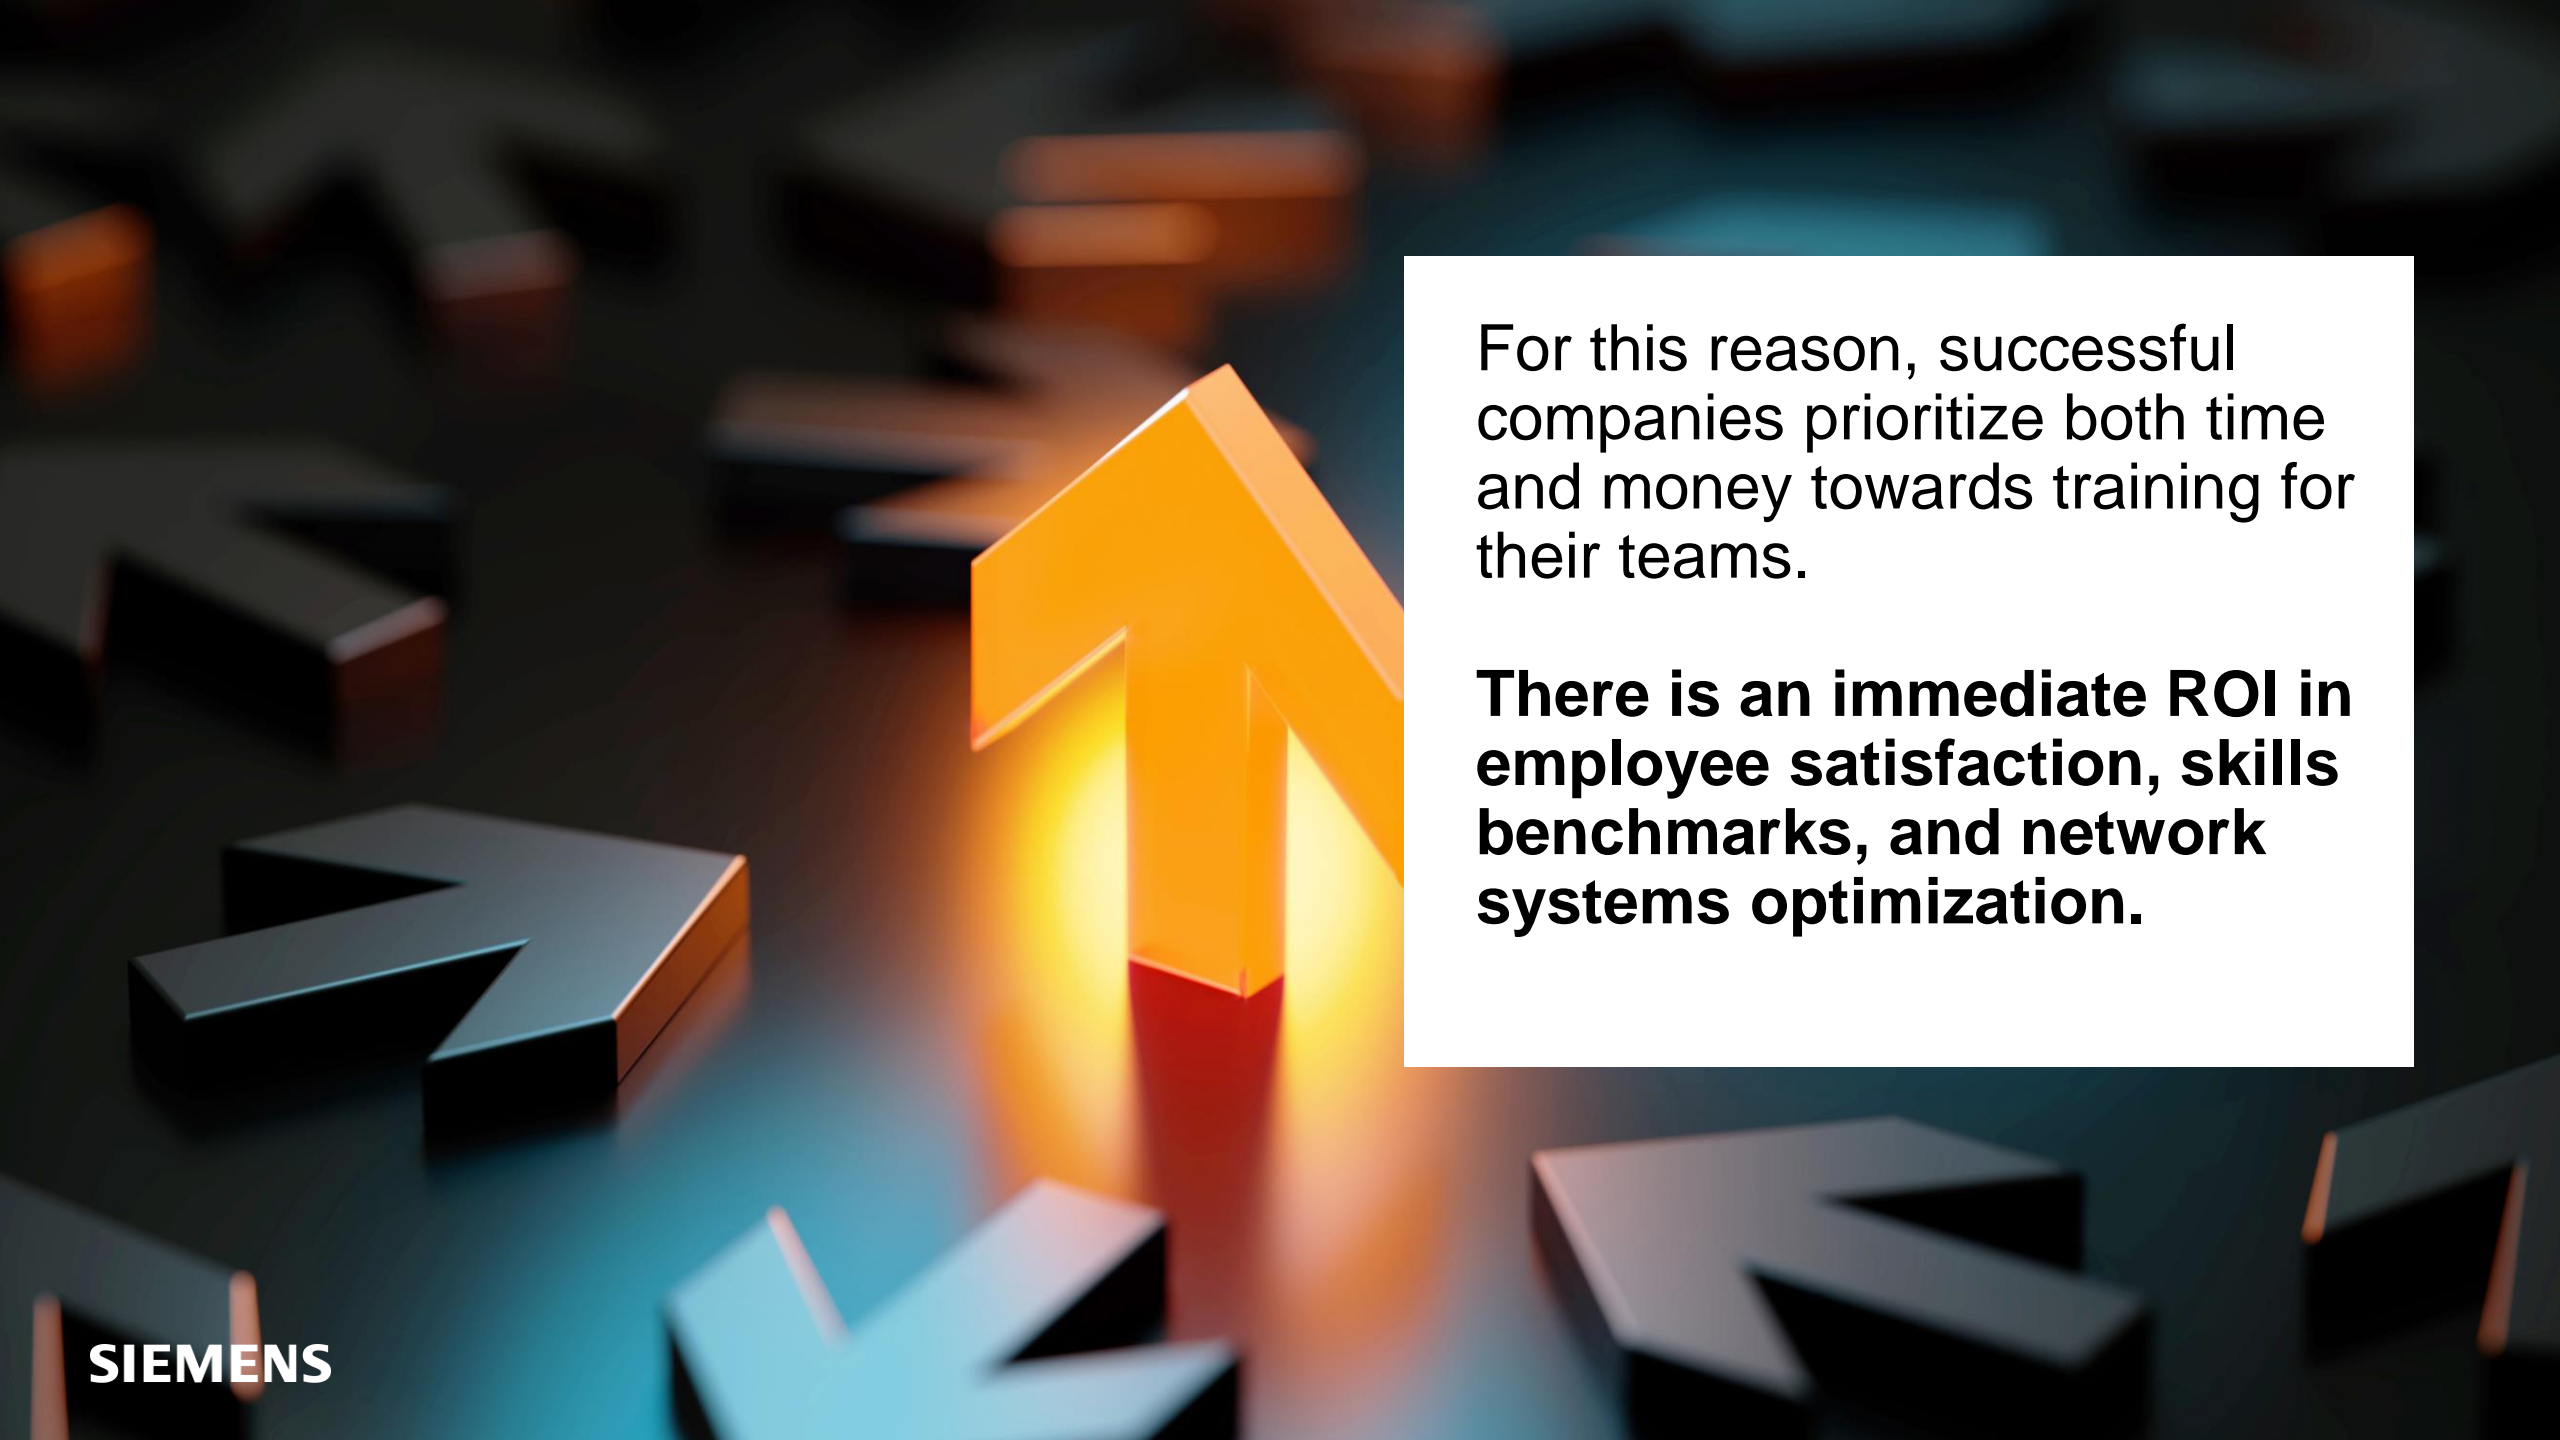

Investments towards operational performance and employee satisfaction.

Companies rely on the knowledge and skills of their staff to implement, operate and maintain complex industrial networking systems which drive operational efficiencies and peak performance.

Yet, today's engineers, maintenance staff, system operators and administrators **face great challenges with keeping up to date on networking equipment and emerging technologies; while also maintaining their daily operations.**

For this reason, successful companies prioritize both time and money towards training for their teams.

There is an immediate ROI in employee satisfaction, skills benchmarks, and network systems optimization.

Siemens customized training can be geared towards specific projects or products **depending on your company's specific learning objectives and operational needs.**

SIEMENS

Siemens instructors are IT and OT certified, and all Siemens training is customized around three key components:

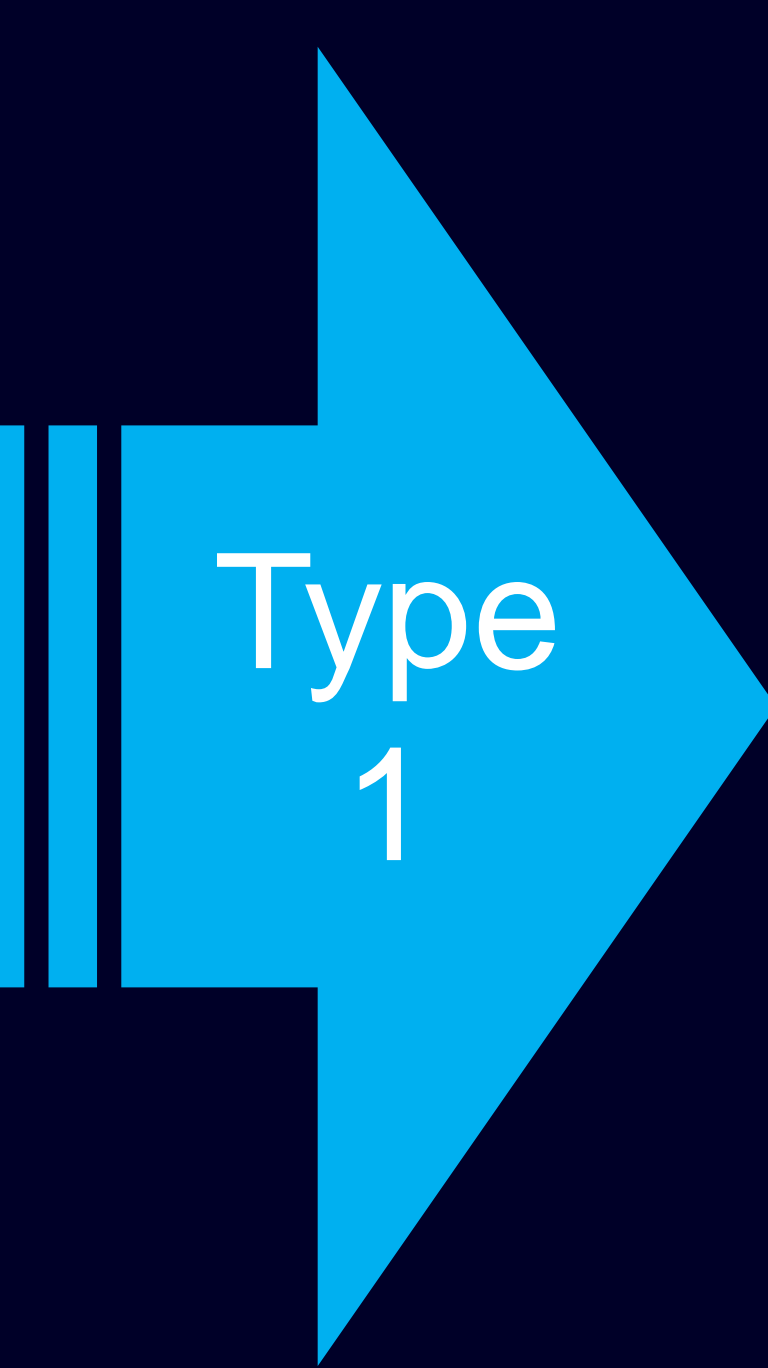

01 Environmental and intended product applications

02 Technical capabilities of staff

03 Devices to be connected to the network

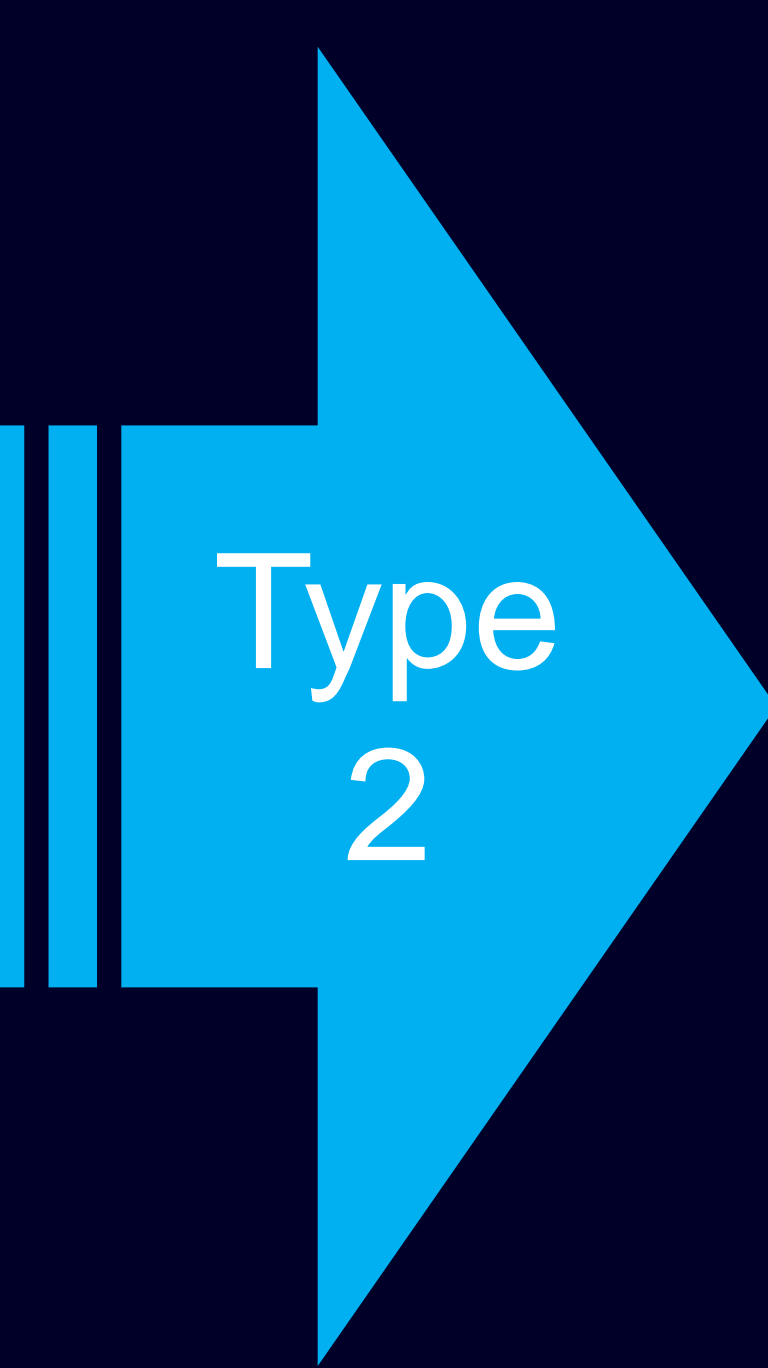

The process begins with a Discovery Session where we review the three key components and identify the desired outcomes of the training. Then we design a custom training program based on the input.

Type 1

Project specific training usually lasts around 1 – 2 days and includes the following:

- Introduction to Network Design Principles
- Network Configuration and Performance Features
- Equipment and Systems Troubleshooting, Monitoring and Maintenance.

Type 2

Product specific training usually lasts around 3-5 days and includes the following:

- Product introduction
- Highlights of operating system and features
- Configuration, monitoring and troubleshooting

Flexibility is paramount when it comes to training delivery, so we offer both in-person and remote options.

The private nature of the classes also provide an added benefit of increased participant-trainer engagement on client-specific challenges.

Companies also benefit by being able to sponsor training that can be applied to each employees annual Professional Development Hours (PDHs), as each participant receives a Certificate of Attendance at the end of each training.

Siemens network training gives your employees practical, hands-on experience with the devices they'll be using day-in and day-out.

SIEMENS

All training is conducted by IT and OT certified Siemens experts who have years of hands-on experience in a variety of industrial and mission-critical networking applications.

SIEMENS

Siemens has been offering technical network training for nearly a decade. As the recognized global leader in industrial networking, we are a partner you can trust for your training needs.
