

## 5 keys to know

### Creating a safe, secure school environment

At Siemens, we believe that a perfect place for learning is one where students, staff, faculty, and parents all feel they are safe, secure, and comfortable, so they can focus on the core mission of education.

01

Harden the perimeter of school buildings.

02

Control access in and out of the campus and in secure areas.

03

Install intelligent, analytical cameras that record an event and monitor cameras remotely.

04

Integrate systems so access control, video, and command & control systems create better situational awareness.

05

Have an effective mass notification system in place for notifying students, teachers, parents and the community.
