Maintenance & Troubleshooting of LV Switchgear and Switchboards

SITRAIN is Siemens training academy, imparts latest technical education to the industry professionals since more than 40 years. Siemens Switchgear & Switchboards are reliable products and rarely face any issues. Most of the problems are related to applications which can be reduced by understanding them correctly, our service team have solved many issues, with their experience, we have introduced switchgear & switchboard training programs that primarily focus on operation, maintenance & troubleshooting.

- Product know-how with its design aspects & operations
- Various application & precautions from panel building to cabling
- Basic concepts of fault level, protections, device selection and release settings
- Thorough hands-on on LV switchboard & switchgear components
- Detailed understanding about the product, operation & installation
- Accessory fitment, troubleshooting and practical aspects of maintenance of components (ACB, contactors & switchboards)
- Innovative Technology that reduces wiring hence saves panel space and cost
- How to follow Type-2 co-ordination for reliable switching and protection
