# **General Product Information**

### **Product Description**

Siemens integrated power systems (IPS) switchboards integrate multiple pieces of electrical distribution equipment into a single assembly. The design results in:

- Reduced installation time up to 90%
- Reduced footprint up to 50%
- Reduced labour risk for installation

The modular design of the IPS switchboard allows it to be combined with standard service entrance or distribution switchboards. Also, IPS switchboards can be cable or bus connected to existing switchboard lineups. IPS switchboards have a wide range of applications and are commonly used in:

- Commercial construction
- Institutional buildings
- Healthcare facilities
- Industrial electrical distribution

#### **Features & Benefits**

#### **Features & Functionality**

- 600 volts AC maximum
- 5000 ampere incoming maximum
- All standard switchboard features
- Lighting panelboards
- Distribution transformers
- Half high distribution chassis
- Individually mounted breakers
- Auxiliary sections for Siemens power monitoring, surge devices, contactors, relays, time clocks, & customer equipment

# 

#### **Reduced installation time**

IPS switchboards arrive at a jobsite with the components factory installed and wired. The result is significantly reduced installation time leading to lower labor costs for projects.

#### **Reduced Space Requirements**

By integrating components that are typically individually mounted, the IPS switchboard can reduce the space requirements for typical electrical equipment installation by up to 40%. This smaller footprint frees up valuable square footage that can be utilized by the building owner for other profitable uses.

#### **Reduced Installation Risk**

IPS switchboards are assembled at Siemens manufacturing plants with meticulous attention to details reinforced with strict testing procedures. This focus on quality ensures that problems encountered with traditional installations – such as misinterpretation of drawings or field installation errors are eliminated. Utilizing IPS switchboards eliminates risks, enabling projects to come in on time and on budget.

#### **Standards and Certifications**

- CSA C22.2 No.31
- Mounted panelboards built to CSA C22.2 No. 29
- Other equipment is CSA listed as applicable

# **General Product Information**

## Modules A & B - Panelboards, Auxiliary & Distribution Sections

#### **Selection Guidelines**

- 1.Select one panelboard, or distribution section per module
- 2. In a panelboard in module A reaches unit space greater than the maximum unit space listed for the panelboard then module B will be required
- 3. Blank Auxiliary compartment must be selected wherever a module is not used
- 4. Any unused (blank) modules can be filled with other options for module A or C

① Unit space based off of Sentron family of circuit breakers.

② Requires horizontal mounting, vertical mounting reduces the circuits by 12 and the unit space by 6"

# Single Width Configurations

## Module A – MCCBs & Auxiliary Compartments

#### **Selection Guidelines**

- 1. Select one individually mounted MCCB or auxiliary compartment per module
- 2. Blank Auxiliary compartment must be selected wherever a module is not used
- 3. Any unused (blank) modules can be filled with other options for module A or C

## Modules B & C – Transformers

#### **Selection Guidelines**

- 1. Select one transformer per module
- 2. Transformers can only mount on bottom portion of switchboard (module C)
- 3. Blank Auxiliary compartment must be selected wherever a module is not used.

① No conduit area in bottom of switchboard at minimum dimension, add extra depth for bottom fed transformer assemblies

2 Transformers are standard 150C rise, Aluminum and Copper windings

③ Different k-factor and other options are available but may change dimensions

(i) Transformer can only mount in bottom half of section, double stacked transformers are not allowed

## **Double Width Configurations**

## Module D – Panelboards & MCCBs

#### **Selection Guidelines**

- 1.Select one panelboard, MCCB, auxiliary compartment per module
- 2. Blank Auxiliary compartment must be selected wherever a module is not used
- 3.Any unused (blank) modules can be filled with other options for module D

Four mounted panelboards

MCCB, two panelboards, and a blank section

① Cable-in and cable out MCCB. Thermal magnetic trip unit only

2 Possible uses: surge devices, ACCESS power monitoring, contactors, relays, time clocks, customer equipment, etc.

3 Requires horizontal mounting, vertical mounting reduces the circuits by 12 and the unit space by 6"

# **Double Width Configurations**

## Module E – Full Height Panelboards

#### **Selection Guidelines**

- 1. Select one panelboard per module
- 2. Blank Auxiliary compartment must be selected wherever a module is not used.
- 3. Any unused (blank) modules can be filled with other options for modules D or E

Two P2 panels in a single section

Conduit for Panelboards & auxiliary compartments (top or bottom connections)
