

Siemens is the leader in European patent applications

- **No. 1 in the European Patent Office's application rankings for 2018**
- **More than 25 percent of patent applications in the area of digitalization**
- **7,300 inventions worldwide in fiscal 2018 – 33 inventions per day**

Siemens submitted more patent applications than any other company in Europe in 2018, thus advancing to first place in the European Patent Office's application rankings. With 2,493 patent applications, Siemens relegated last year's leader, Huawei, to second place, followed by Samsung and LG. In 2017, Siemens had taken second place. The last time the company was ranked No. 1 in Europe was in 2011. More than 25 percent of the patents are in the areas of Industry 4.0 and digitalization, where Siemens submitted considerably more applications for intellectual property rights than in the prior year. The company also reported a substantial increase in the areas of artificial intelligence and cybersecurity.

"The ranking proves that Siemens is continually and consistently delivering outstanding innovation work, in particular, in digital technologies," said Beat Weibel, head of the Intellectual Property department at Siemens. "Nevertheless, our focus is not just on the mere number of patents but also on the quality and the broad regional distribution of our protective rights. Above all, digitalization and the importance of the service business are making broader coverage necessary."

Siemens holds a total of more than 65,000 patents. The company's employees submitted around 3,900 patent applications and 7,300 invention disclosure reports worldwide in fiscal 2018. Based on 220 workdays a year, this represents an average of about 33 inventions per day. Siemens has around 43,000 R&D employees in 44 countries, including some 14,100 in Germany.

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 170 years. The company is active around the globe, focusing on the areas of electrification, automation and digitalization. One of the largest producers of energy-efficient, resource-saving technologies, Siemens is a leading supplier of efficient power generation and power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. With its publicly listed subsidiary Siemens Healthineers AG, the company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2018, which ended on September 30, 2018, Siemens generated revenue of €33.0 billion and net income of €6.1 billion. At the end of September 2018, the company had around 379,000 employees worldwide. Further information is available on the Internet at www.siemens.com.
