

The Blockchain Solution for Tax and Customs

taXchain as a Platform

taXchain is a blockchain platform in tax and customs. The Blockchain technology has the potential to drive **cross company processes** in tax & customs to the next level. It could solve various challenges, such as the lack of transparency in complex exchanges between many stakeholders.

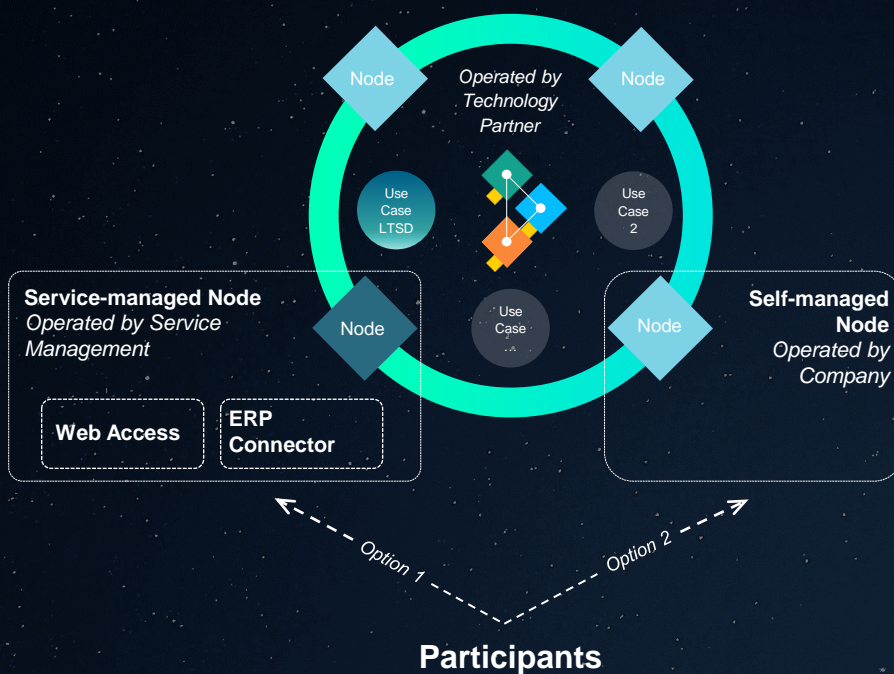

Business Need

Tax and customs processes are highly manual, paper-based processes that are prone to inefficiencies. Thus, they are time consuming and often require certification of authenticity to ensure audit & regulatory compliance. A variety of tax use cases could be covered by Blockchain. As the first use cases, the customs long term supplier declaration according to Articles 62 and 63 UZK-IA was set up on taXchain.

taXchain Ecosystem

taXchain is an industry independent platform. Active participants are equally entitled to define and build new use cases on tax and customs topics and to exchange the data via taXchain with business partners and authorities. Technical development and implementation can be supported by our technology partner or be self developed. The access to the platform can be either via a node operated by our service management or a self-managed node. Our technology partner can also support this on request.

taXchain

Technology Partner

- On- and Off Boarding
- Platform Operation and Development
- Platform Security
- Blockchain Node Management
- IT Development of New Use Cases

Service Management

- Customer Relationship
- Technology Partner Management
- Cash Management

Participants

- New Use Case Concept
- Implementation of Existing Use Cases

Key Benefits

Trust via Blockchain

Truth on origin
Real time information

Digital

Removal of paper based processes

Cost Savings

Reduce operating costs
Reduce compliance risk

Compatibility

System neutral development

Efficiency Gains

Speed
Analytics
Transparency

Data Security

High standard of safety
Two-factor authentication

Flexible IT Setup

Service managed node & self managed node

Standardisation

Chance for diverse Blockchain use cases
