

Pakistan combined cycle power plant project

Siemens' products at the site of Pakistan CCPP project

Siemens partnered with Harbin Electric International Company Limited (HEI) in a Pakistan combined cycle power plant (CCPP) project, where Siemens provided 500 kV switchyard complete engineering and equipment purchasing package, as well as power transmission and distribution products, including generator step up transformers, unit auxiliary transformers, distribution transformers and more than 200 low-voltage switchgears. The one-stop-shop solutions and services significantly strengthened the compatibility between various components and improved the project execution efficiency. The combined cycle will be put into operation in 2018. The power plant is located in Punjab Province of Pakistan. After the commercial operation, it will help alleviate the electricity shortage of the country.
