

# CMEC Belarus Berezovskaya CCGT project

The exterior of Belarus Berezovskaya combined cycle power plant

Siemens cooperated with China Machinery Engineering Corporation (CMEC) to deliver a SGT5-4000F combined cycle unit to Berezovskaya combined cycle power plant (CCPP) of RUE “Brestenergo” in Belarus. The power plant was the second largest power plant in Belarus and accounted for about 10% of the country’s total power output. Siemens delivered high-quality products on time and also proactively mobilized local resources to facilitate project implementation.

With joint efforts of Siemens and CMEC, the plant was put into operation two and a half months ahead of schedule. This made a record for ahead-of-schedule operations of large power plants in recent years in Belarus and created considerable economic benefits for the project owner. The power plant also won for CMEC many awards including the Luban Prize for China Construction Project (Overseas Project Category) and the first prize of Excellent Engineering Design of Power Industry. Moreover, Belarus President Alexander Lukashenko also expressed genuine satisfaction to the high quality and efficiency of the project.
