Certification Examination

Examinations are part of every certification training and are used to gauge a participant's understanding of course content on completion. While we recommend participating in the complete training as it strengthens a participant's overall knowledge base, it is possible to take an exam without preceding training, especially in the case of a repeat or recertification. For this please arrange an examination date with your local Siemens representative.

Examinations consist of one or more single tests, depending on the certification path. One test includes 50 questions about the respective subject which have to be answered in 60 minutes. The examination is to be taken independently and without aids. Examinees who take the test in another language than their native language are allowed to use a dictionary and get additional 15 minutes.

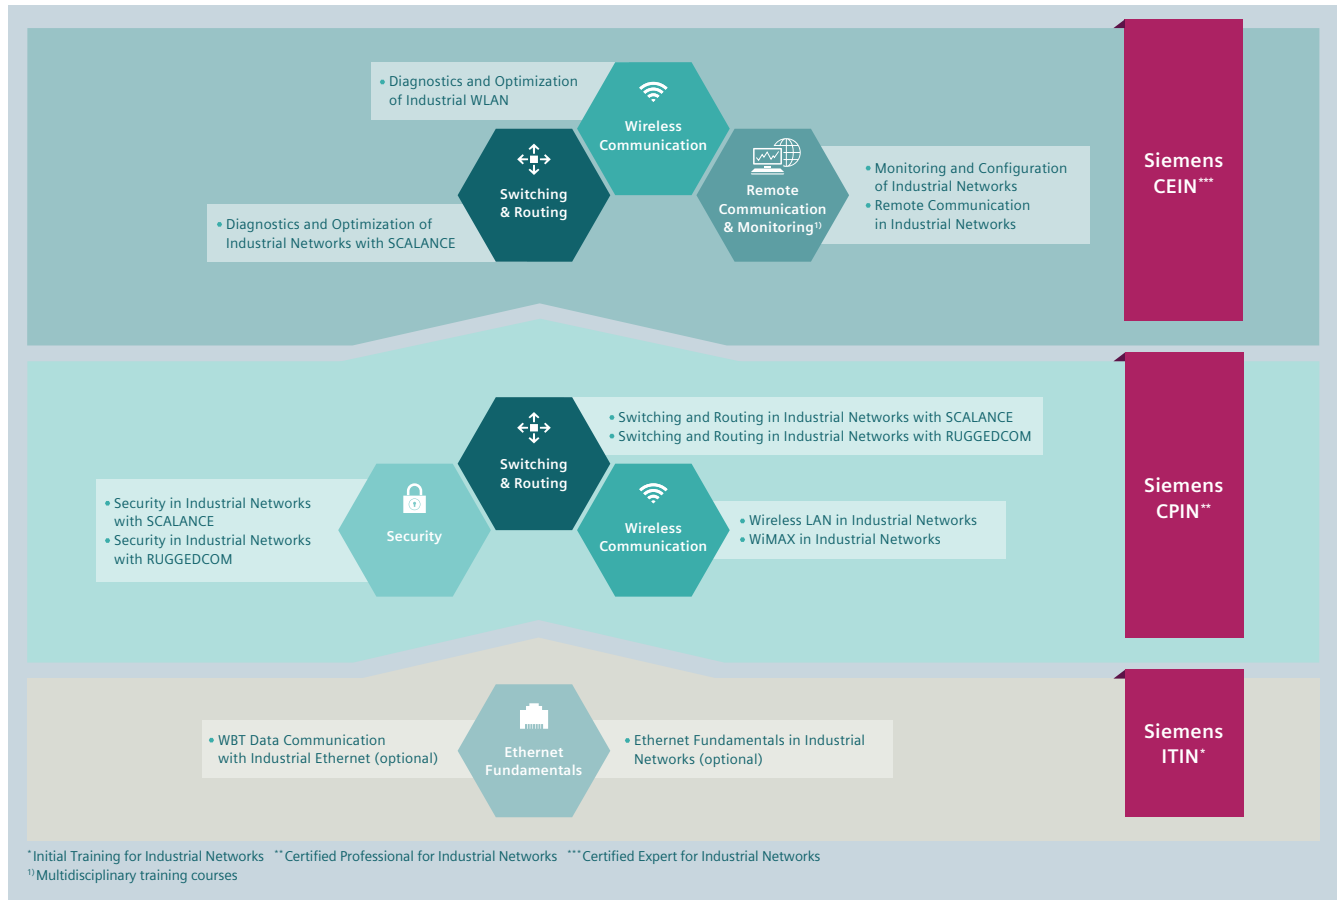

Siemens Certified Professional

Through passing the Professional level examination, you will receive a certificate as *Siemens Certified Professional for Industrial Networks* in the respective subject area. This certificate is valid for three years from the date of examination.

Siemens Certified Expert

To achieve the title of *Siemens Certified Expert for Industrial Networks* it takes three single certificates. Both a Professional and an Expert level certificate of the targeted certification path and one certificate from another subject area or an elective certificate. It does not matter in which order the exams are written. With the last acquired certificate the examinee is awarded with the title *Siemens Certified Expert for Industrial Networks* in the respective subject area. This certificate is valid for three years from the date of examination. At the same time the validity of the included single certificates extend to the validity of the Expert certificate.

Siemens Industrial Networks Training und Certification program

Recertification

Each certificate has a validity of three years starting at the date of examination. An Expert certificate extends the validity of the three included single certificates. To preserve the certificate, a recertification is necessary after three years.

Recertification examinations are equal to normal certification examinations. Therefore the same conditions apply as for the initial certification. To renew the Expert certificate it is not necessary to take the Professional exam in the respective certification path but only the Expert exam and the exam of the additional or elective certificate.
