SINAMICS Low Voltage Converters

Efficient. Versatile. Fit for the future.
Simply my drive.

Edition 2019

siemens.com/sinamics
Introduction

Into the digital future –
with simplicity and versatility

With the SINAMICS family of converters from Siemens, you can simply and efficiently address each individual drive application – in the low, medium and DC voltage domains. All of the drive components are perfectly harmonized and coordinated with one another. Siemens converters, motors and control systems can be immediately and seamlessly integrated into the drive train and into existing automation landscapes. Simply select the appropriate drive components and start to commission your drive system.

Fit for a digital future – with SINAMICS, you have the optimum basis to address all of the requirements relating to digitalization.
As a result of the convenient connection to MindSphere – the Cloud-based solution – you can simply boost the efficiency of your production and reduce downtimes to a minimum based on innovative maintenance concepts.
SINAMICS – simply my drive.
Contents:

- Introduction: 2 – 3
- The SINAMICS family – an overview: 4 – 5
- Applications: 6 – 7
- The advantages of the SINAMICS family – digitalization: 8
- The advantages of the SINAMICS family – efficient engineering: 9
- The advantages of the SINAMICS family – Safety Integrated: 10
- The advantages of the SINAMICS family – perfect interaction: 11
- The advantages of the SINAMICS family – services: 12
- Standard performance converters (V20 / G120C / G120 / G130 / G150): 14 – 17
- Industry specific converters (G120X / G180): 18 – 19
- High performance converters (S120 / S150): 20 – 23
- Distributed converters (G110D / G120D / G110M): 24 – 26
- Servo converters (V90 / S210 / S120 / S120M): 27 – 31
- An overview of the technical data: 32 – 33
The SINAMICS family – an overview

The SINAMICS family for all power & performance classes

Always the optimum version – for every application, power rating and requirement: The wide range of SINAMICS converters has precisely the solution you require for your application.

SINAMICS – versatility for maximum efficiency

Extensive portfolio

Customized power, performance and functionality: SINAMICS converters have a huge degree of flexibility – and also provide future-proof solutions for your applications.

Digitalization

SINAMICS converters are ready & prepared for the digital era: Operating data can be directly transferred to Cloud platforms via MindConnect. The information collected there can help to make your plant or system more productive in the future and reduce downtimes to a minimum.

Efficient engineering

Powerful tools support you over the complete lifecycle when configuring, engineering, commissioning and troubleshooting your SINAMICS drive solution. Further, these tools also help you optimize your processes.
The SINAMICS family – an overview

Low voltage
- Standard performance converters
- Industry specific converters
- High performance converters
- Servo converters
- Distributed converters
For demanding applications with high power ratings

Safety
Integrated
Maximum safety for operating and maintenance personnel: Safety functions are already integrated in our SINAMICS drives. You benefit from shorter response times, a higher degree of cost-effectiveness and lower wiring costs.

Drive-system solution
Profit from our modular automation concept that can be scaled as required: SINAMICS converters operate perfectly with SIMOTICS motors, SIMOGEAR geared motors – as well as SIMATIC, SINUMERIK and SIMOTION control systems. All of the components communicate seamlessly via PROFINET.

Services across the complete lifecycle
From spare parts management up to optimized maintenance concepts: Based on customized service quotations for your SINAMICS converters, you can sustainably secure maximum availability and productivity of your plants and systems.

Applications

The optimum converter for each and every application

Depending on the actual power rating and functionality, the following converters are available, for example:

### Pumping/ventilating/compressing

SINAMICS supports the continuous and energy-efficient operation of pumps, fans and compressors – either running continuously or requiring a high dynamic performance. The advantages include especially precise flow control, short response times – and the avoidance of damaging vibration levels and cavitation.

- SINAMICS V20
- SINAMICS G120X
- SINAMICS G130 / G150
- SINAMICS G180

### Moving

Energy-efficient and rugged solutions for basic conveyor technology with roller or chain conveyors, for hoisting gear and elevators – as well as for storage and retrieval machines that demand a high dynamic performance – and always with Safety Integrated onboard.

- SINAMICS G120C
- SINAMICS G120D
- SINAMICS G110M
- SINAMICS DCM
Applications

Positioning

When high dynamic performance and precision are demanded: SINAMICS ensures precise positioning of individual axes, allows several axes to be interpolated in a coordinated fashion – for example as required in complex robotic applications.

Processing

SINAMICS is the ideal solution for continuously running processes demanding high speed and torque precision, for instance, for extruders, centrifuges, agitators and all types of production machines – motion control, isochronous communication and Safety Integrated.

Machining

Whether high-speed spindles or feed and auxiliary axes for turning, milling, drilling and sawing: SINAMICS is the perfect drive for all applications in material processing. Fast adaptability and minimum equipping times play a decisive role when it comes to achieving high productivity.
The world was never as networked as it is today – thanks to digitalization, machines and equipment exchange data in real time so that they can interact perfectly with one another.

Digital technologies also provide a great opportunity to make your production even more efficient, cost-effective and secure – without having to invest in completely new infrastructures.

Worldwide, operating data from production plants and systems can be captured and evaluated in MindSphere – our Cloud-based open IoT operating system – to generate valuable know-how. Based on this data, predictive maintenance concepts can be implemented to avoid machine failures, therefore keeping downtimes as short as possible. Seamless engineering tools simplify the integration of converters and motors in your plants and systems.

The link to the Cloud and our MindSphere Apps ensure that you benefit from maximum transparency along the complete drive train:

SIDRIVE IQ is the IoT digitalization portfolio for drive systems. It consists of MindSphere apps and digital services and allows the complete drive train to be optimized. The SIDRIVE IQ Fleet MindSphere App for applications in the process industry simply provides you with information about the state of your drive system. This is based on continuous analysis of mechanical vibration values, temperature, power and efficiency. You benefit directly from factors such as increased plant availability and productivity.

With the Analyze MyDrives MindSphere App, which is also an integral component of SIDRIVE IQ, you can continuously monitor fundamental operating states of your SINAMICS low-voltage converters in the production industry. This allows you to identify when it is necessary to optimize and/or service your drive train at an early stage.

Carry out maintenance work on your machines at the precise moment that it is necessary.

**Highlights**

- Drive technology as entry point into digitalization
- Seamless machine database through integrated engineering
- Transparency along the complete drive train
- Secure data capture in the Cloud
- Identification and implementation of optimization measures
- Development of new business and service models

The advantages of the SINAMICS family – digitalization
Efficient engineering over the complete lifecycle

Selecting products with the DT Configurator
From gear units through motors and converters up to the control system: Using the Drive Technology Configurator, you can quickly select the optimum products to address your specific applications.

The TIA Portal includes SINAMICS Startdrive to intuitively integrate SINAMICS drives into the automation landscape
Perfect interaction between SINAMICS drives and SIMATIC controllers:
The same operating concept, elimination of interfaces and the high level of user-friendliness make it possible to quickly integrate SINAMICS converters into the automation environment and commission them using the TIA Portal.

SIZER for simple drive engineering
Starting from your application, the tool supports you step-by-step when defining the mechanical system as well as when selecting and dimensioning converters, motors and gear units.

In addition to engineering results such as characteristics, technical data, installation drawings and dimension drawings, SIZER for Siemens Drives also calculates the performance and the load-dependent energy usage.

SinaSave to identify energy-saving potential
Using the SinaSave web-based tool, you can identify the energy-saving potential that your SINAMICS converter can free up. The evaluation provides information about the specific energy-saving potential, a financial analysis as well as information regarding the expected payback time.

Commissioning and diagnostics
Operation, either locally or from a mobile device, monitoring, commissioning, diagnostics and service using the SINAMICS V20/G120 Smart Access Module, IOP-2 or BOP-2.

Highlights
- Leverage all of the convenient TIA Portal functions for converter and drive engineering
- Fast selection, configuring and ordering
- Simple commissioning
- Determine energy-saving potential
The advantages of the SINAMICS family – Safety Integrated

Optimum support for machine OEMs and machine operators:
With Safety Integrated in SINAMICS drives, you are not only selecting a safe technical solution, but you also benefit from perfect support relating to all safety issues. This starts with the seamless integration of safety technology in SINAMICS drives and in SIMATIC, SINUMERIK and SIMOTION control systems. This certified system offers valuable support in the workflow, such as engineering in the TIA Portal, documentation in compliance with the applicable standards using the Safety Evaluation Tool – all the way up to an integrated acceptance test.

Safety Integrated does away with electromechnical components. For you, this means that you require less space in your control cabinet, and you can reduce your costs when it comes to stocking spare parts and maintenance. Further, there is no wear as shutdown is realized purely electronically. Even when safety functions respond, the converter remains connected to the line supply – and can still be fully diagnosed.

Customized safety concepts with Safety Integrated can be very easily implemented based on the safety-related communication via PROFIsafe. You benefit from higher productivity with minimized downtimes.

Highlights
- Certified system solution in compliance with the applicable standards
- Lower system costs due to fewer components and lower wiring costs
- Faster commissioning/maintenance
- Higher productivity through shorter downtimes

siemens.com/safety-drives

Safety Integrated – simply safe, twice the efficiency
Perfect interaction – the drive system solutions

The SINAMICS family is perfectly designed to interact with all automation components from the word go – with straightforward, seamless engineering and products that are perfectly harmonized and coordinated with one another. All of the drive elements seamlessly operate with one another, from converters through motors up to gear units and couplings.

As a consequence, SINAMICS converters provide you with a complete solution that can be flexibly scaled to address your automation task. This means that you not only reduce time and costs, but you can also secure a sustainable lead in the market.

Highlights

• Drive components that are optimally harmonized and coordinated with one another
• Seamless and future-proof complete solution
• Efficient engineering and simple commissioning
The advantages of the SINAMICS family – services

Cutting edge services – to continuously improve your production environment

If you want to remain competitive, then you must be able to dynamically respond to market requirements. The optimum strategy is to continually increase the availability and productivity of your systems and machines. As partner with comprehensive technology and industry know-how, Siemens Industry Services can offer you a unique range of services and support.

Our industry services cover the complete lifecycle of the SINAMICS product family. We support our customers to produce more efficiently with higher profit margins, help them leverage the opportunities provided by digitalization – and at the same time reduce their total cost of ownership.

You benefit from spare part and repair services specific to your plant or system, as well as global support provided by our experienced service experts. This support is available locally, remotely, online, by telephone or through individual training courses.

Digital Industry Services
Are you ready for digitalization? With our digitalization check you can find out just how prepared your plant or system already is for the digital era. Here we apply our digital drive train services for the complete drive train – a modular portfolio comprising remote and condition monitoring services along with an extensive portfolio to improve and optimize your system.

Optimized service contracts
To a large extent, SINAMICS components are maintenance-free. Having said that, with an individual service contract you ensure that every component of your SINAMICS drive solution is checked, maintained and overhauled at precisely the right point in time. And of course, replaced if necessary – also as preventive measure.

Drive system retrofit
The SIMOVERT converter family sets itself apart as a result of its long service life and high reliability. This also applies to SIMOVERT MASTERDRIVES. In recent years, these have been continuously replaced by the SINAMICS product series. We recommend that you switch over to the SINAMICS family of converters so that the availability of spare parts can be secured in the future, thus avoiding plant downtimes. We would be more than willing to help you draw up the best migration strategy.

“Extended Exchange” drive service
We offer a free-of-charge 6-month extended warranty for SINAMICS converters. Further, you have the option of insuring your SINAMICS drive for up to seven years – therefore guaranteeing continuous availability over the complete product lifecycle.

Register your SINAMICS converter now: siemens.com/drive-registration

Highlights
• Maximum system availability and operational reliability through tailored services
• Improved operating conditions with costs that can be transparently budgeted
• Extension of the product lifecycle of machines and systems

Energy recovery
- No

Control modes
- V/f (linear, square law, FCC, ECO), sensorless vector control (SLVC)

Ambient temperature
- –20 °C to 45 °C (60 °C with derating

Line filter
- According to EN 61800-3, with integrated line filter for environments Category C3/C2; optional C1 with external filter B

Braking chopper
- No

Safety functions
- STO

Communication
- PROFINET, PROFIBUS, EtherNet/IP, Modbus RTU, USS, BACnet MS/TP2, Wi-Fi über SINAMICS G120 Smart Access Module

TIA Portal connected
- No, only via GSD file

Commissioning tools
- BOP-2, IOP-2, G120 Smart Access Module

Controller
- SIMATIC S7-1500/1200/400, Desigo PX

Recommended motors
- SIMOTICS GP/SD (synchronous reluctance motors with aluminum/cast iron enclosures)
- SIMOTICS GP/SD (standard induction motors with aluminum/cast iron enclosures)
- SIMOTICS FD (compact induction motors with different cooling concepts)
- SIMOTICS DP (smoke extraction motors)

1 The max temperature is 55 °C for PN version drives

Highlights
- The infrastructure drive for pump/fan applications in water/waste-water industries and building technology
- Seamless range of power ratings available in 9 frame sizes extending from 0.75 – 630 kW
- Simple selection and ordering using just one order number – and immediately ready to run
- Impressively efficient with specific industry and energy efficiency functions

Application
- Pumping/
- Ventilating/
- Compressing

## SINAMICS S150
### Multifunctional. Precise. Capable of energy recovery.

### Highlights
- Modular system for high performance
- High degree of scalability, flexibility, combinability

### Applications
- Processing

### Format
- Cabinet unit

### Drive concept
- AC/AC

### Degree of protection
- IP20, optional: IP21, IP23, IP43, IP54

### Supply voltage/power kW (hp)
- **3AC 380 ... 480 V**
  - 110 ... 800 kW (150 ... 1150 hp)
  - 75 ... 1200 kW (75 ... 1250 hp)
- **3AC 500 ... 690 V**
  - 75 ... 1200 kW (75 ... 1250 hp)

### Energy recovery
- Yes

### Control modes
- V/f control
- Vector control with and without encoder
- Servo control with and without encoder

### Ambient temperature
- 0 °C to 40 °C

### Line filter
- With integrated line filter for environments according to EN 61800-3 Category C3/C2
- Without line filter for environments according to EN 61800-3 Category C4

### Braking chopper
- Yes (optional)

### Safety functions
- STO, SS1, SBC, SOS, SS2, SLS, SSM, SDI, SLP, SP, SBT, SLA, SCA

### Communication
- PROFINET, PROFIBUS DP, EtherNet/IP, USS (no CU310), CANopen (CU320-2), Modbus TCP, PROFIsafe

### TIA Portal connected
- Yes

### Commissioning tools
- SINAMICS Startdrive, SCOUT, web server

### Controller
- SIMATIC, SIMOTION

### Recommended motors
- SIMOTICS SD, XP, DP, FD, TN, HT, M

**Recommended motors**
SIMOTICS S-1FK2 (servomotors)

### Highlights
- Easy commissioning using a web server and One Button Tuning
- Optimized connection system using OCC (one cable connection)
- SIMOTICS S-1FK2 motors for increased performance

### Applications
- Processing
- Positioning
- Moving

Subject to changes and errors.
The information provided in this brochure contains merely general
descriptions or characteristics of performance which in case of actual
use do not always apply as described or which may change as a result
of further development of the products. The required performance
features are only binding if they have been expressly agreed upon in
the form of a written contract.
All product designations may be trademarks or product names of
Siemens AG or supplier companies whose use by third parties for their
own purposes could violate the rights of the owners.

To ensure the secure operation of Siemens products and solutions, it is
necessary to take suitable preventive measures (e.g., cell protection
concept) and integrate each component into a state-of-the-art holistic
industrial security concept. When so doing, products from other
manufacturers should be taken into account. For more information about
industrial security, visit http://www.siemens.com/industrialsecurity.
