

In the fight against infection, keeping all elements of personal protective equipment (PPE) and other mobile equipment disinfected is critically important to the safety and success of healthcare workers on the front lines. Available through Violet Defense™ and their commercial partners at PURO™ Lighting, pulsed Xenon full-spectrum UV lighting technology provides hospitals, nursing homes, and support facilities with a proven, easy-to-implement way to safely and efficiently harness the power of light to decontaminate air and surfaces. With a variety of products offered, we can provide you with mobile and installed solutions to meet your disinfection needs.

Proven and effective protection made easy

Our dedicated infection control solution enables you to create a space designed to help disinfect personal protective and other critical equipment.

- Manufacturer testing has demonstrated effectiveness against certain viruses and bacteria*
- Harnesses the germicidal power of light to kill bacteria and inactivate viruses in the air and on surfaces
- Designed to make disinfection easy, system will eliminate germs in a flash with pulsed Xenon full-spectrum UV light

Supporting North American Healthcare

As the need for testing, patient care, and space expands, we're harnessing our capabilities, expertise, and global network of partners to outfit and supply hospitals, field hospitals, and repurposed facilities in the following ways:

- Supporting the rapid design and development of healthcare infrastructure
- Identifying sources of potential contamination and offering effective technology to mitigate the risk
- Developing a holistic approach to better environments of care

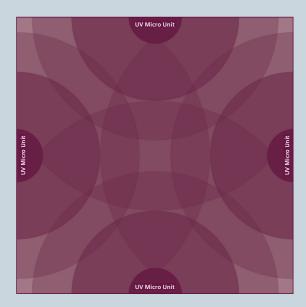

Solution Partner Smart Infrastructure

8' x 8' Targeted Coverage Area

The dedicated infection control solution provides the equipment needed to create an 8' x 8' disinfection space where PPE and other mobile equipment is exposed to UV light from all angles.

How it works

This infection control solution combines the germicidal power of ultraviolet light with an optimized 8' x 8' layout that maximizes UV exposure to eliminate harmful germs. PPE and other critical mobile equipment is placed within the designated 8' x 8' area where pulsed Xenon technology is used to deploy powerful bursts of UV-C, UV-B, UV-A, and violet-blue light capable of killing certain bacteria, fungi, mold, and inactivating viruses.

What the solution contains:

- Eight UV units each is designed to have two units installed on each of the four walls (one high, one low) of an 8' x 8' room (Siemens provided)
- Aluminum suspension wires and hardware for hanging masks or other PPE equipment (customer provided)
- For optimal results we recommend installation of either aluminum sheets or mirrors on the walls to maximize reflection and UV exposure (optional)

About Violet Defense

Since its inception, Violet Defense has been on a journey to harness the germicidal power of ultraviolet light to help protect the world from germs. Its patented technology miniaturizes the deployment of UV light to integrate into almost any product or environment.

About PURO Lighting

PURO Lighting, powered by Violet Defense technology, offers ground-breaking products that use the power of full-spectrum UV light to rapidly disinfect any enclosed area of viruses and pathogens.

About Siemens Smart Infrastructure for Healthcare

Siemens Smart Infrastructure brings innovations in smart building technologies to create environments that care at hospitals and other healthcare facilities. Our smart healthcare infrastructure solutions further improve the patient experience, hospital efficiency, productivity, and safety of healthcare workers and hospital staff.
