

## IC4 Emulator 14.0 Patch 2

Please read these notes before attempting to use this update.

This is a cumulative update that will install IC4 Emulator version 14.0.2. This will provide ST950 firmware 46059 issues 9, 10 and 11 to an existing IC4 Emulators 14.0 installation.

**IMPORTANT:** This update will only upgrade IC4 Emulators at version 14.0.0.8 and higher.

Please use the following instructions to confirm that the existing version of IC4 Emulators installed on the PC is correct before attempting to run the update tool.

1. Open IC4
2. Select the menu option **Help–About...**
3. Check that the version displayed in the window starts: IC4 14.0
4. Press the OK button to close the 'About' window.
5. Open any valid IC4 configuration.
6. Select the menu option **Compile–Emulate...** and a file selection window opens.
7. Check that there is a file named "IC4SIM\_46059\_8.exe".
8. Right-click on this file and select the Properties option.
9. In the Properties window that opens, select the 'Details' tab.
10. Check that the version shown is at least: 14.0.0.8
11. Press the Cancel buttons to close the open windows.

If a previous version of IC4 is installed, please contact Siemens for the upgrade to v14, for which there may be a charge.

If IC4 Emulators 14.0 are installed, open the executable "IC4Sim\_14.0 - 14.0\_2\_0.exe" to begin the installation and follow the instructions that appear.

**Please Note:** As usual, the installer will request '**Administrator**' user rights in order to update the necessary program files.

When the update is complete, Emulators for the ST950 firmware 46059 issues 9, 10 and 11 will have been installed (in the usual place) and the version of IC4 Emulators will now be shown as 14.0.2.0.

### **Known Limitations**

1. The new firmware issues i.e. "46059 ISS 9" aren't listed in the Firmware Type and Issue drop down on the IC4 General Junction Data screen. The user has to manually edit this field if the configuration is required to only run with firmware issue 9 or later (and launch the issue 9 Emulator by default).
