Introduction

This bulletin provides guidance on the compatibility of USB memory sticks with the ST950 traffic controller.

Scope

USB memory sticks used with the ST950 Traffic Controller.

Procedure

Most USB memory sticks are suitably formatted when purchased.

If a USB memory stick is not recognised by the ST950 traffic controller then please check the following:

- That the USB memory stick is formatted with the FAT32 file system and not NTFS.
- That the USB memory stick is not encrypted.
- That the USB memory stick has not been re-formatted using a Windows computer (temporary limitation to be fixed in next firmware release).
