Introduction

The ST900ELV & ST750ELV controllers can be fitted with either *switched* or *non-switched* tactiles. This bulletin specifies the part numbers and details for each tactile kit.

Scope

All ST900ELV & ST750ELV controllers.

Procedure**ELV Tactile Kit, Non Switched** : 667/7/17390/048

Non-switched tactiles are wired to separate drive outputs configured to operate when the pedestrian green is illuminated. This tactile assembly comprises an integrated motor unit and drive module and is mounted within the pedestrian unit. For non lamp monitored pedestrian greens the tactile can also be wired directly to them.

ELV Tactile Kit, Switched : 667/7/17390/148

Switched tactiles are tactiles that can be disabled when required by use of an I/O card output. This switched tactile assembly comprises two separate parts – the tactile drive module, which is mounted in the controller cabinet or signal head and the tactile motor unit, which is mounted within the pedestrian unit.

ELV Tactile Kit, Switched (Integrated) : 667/7/17390/248

Same as the above except that this switched tactile assembly integrates both the tactile drive module & motor unit into one single unit, and therefore can be mounted directly within the pedestrian unit.

Instructions on how to install each of the above tactiles can be found in the ST900 General Handbook ([667/HB/32900/000](#)), the ST900ELV Installation & Commissioning Handbook ([667/HE/32900/000](#)) and the ST750 General Handbook ([667/HB/32750/000](#)).
