This bulletin has been raised to provide notification to the field that MOVA Setup for Windows is now available to download via the TRL website.

Scope

All MOVA users.

Procedure

MOVA Setup for Windows is the latest version of TRL's MOVA data configuration program. The program allows the user to create and edit MOVA dataset files for all versions of MOVA from M2.9 to M6.0. The creation process takes the user step-by-step through the data required to configure a MOVA site. The program also allows datasets to be converted for use with different versions of MOVA.

MOVA Setup for Windows and the revised Application Guides are now available for free download from the following website: <https://www.trlsoftware.co.uk/>

ADDITIONAL NOTE (28/09/2009):

There have been a number of reports of problems with the datasets generated by MOVA setup for Windows. If users experience unpredictable results using this version of Setup they should consider reverting to the previous 'non-Windows' version.
