

Fleet Manager

The control center for
your data in MindSphere

Always up to date: the most important data on your connected assets

Customize your personal asset overview. The web-based Fleet Manager gives you precisely the overview you want of all data for your assets. You can define your assets' properties and configure events that you wish to know about, as well as the type of data visualization. Your production configuration is mapped 1:1, thanks to individual floor plans and a map view. That means you can monitor your assets anytime and anywhere – and you can share your knowledge with other users.

The fastest path to digital services

Combined with extremely easy configuration of plant components and systems in MindSphere, the Fleet Manager is the easiest way to monitor all details of your assets. Thanks to the powerful visualization and request system, the app lets you prepare the specific asset analyses that you need.
