

# SIMATIC S7-400: Harmonized innovation and continuity

The SIMATIC S7-400 controller has always been synonymous with challenging automation tasks in the process industries. Safety and availability combined with the highest performance and flexibility are all possible with the SIMATIC S7-400 from Siemens.

With its high scalability, the SIMATIC S7-400 offers a tailor-made solution for almost every task – whether in a complex SIMATIC PCS 7 or classic STEP 7 application. Wherever processes must be designed with efficiency, high availability and fail-safe requirements in mind, plant operators have relied on the SIMATIC S7-400H/FH for years.

To provide the ultimate protection against external influences, an additional conformal coating layer on the printed circuit board has become standard in automation. For this purpose, the manufacturing plant in Karlsruhe (Germany), the birthplace of the SIMATIC S7-400, has been expanded to include a modern, environmentally friendly UV coating section.

With planned availability until 2035 and beyond, the SIMATIC S7-400 automation system is particularly suitable for long-term projects in various industrial sectors.
