

Ensure safe workspace occupancy and productivity

Inform and enable your people with our new workplace app

A single app built for your people

Comfy is Siemens' innovative workplace experience app built specifically to provide your employees with the latest data on their working environment, as well as deliver the real benefits of on-demand control for every user.

Importantly it will support a safe and healthy return to work, assist with space utilisation, determine occupancy limits and help your employees navigate to the right locations.

All this will enable you to reduce people density across the workplace and adhere to social distancing guidelines.

How Comfy works

Unlike other workplace app solutions, Comfy directly integrates with your systems such as building management, lighting controls and IoT networks to deliver smart automation, all within a single, intuitive app.

All relevant data is collected and advanced machine learning customises the user experience and drives operational efficiencies.

Existing Comfy users

Google, Microsoft, McDonald's, Bloomberg and Intel are just some of the organisations who have already invested in this advanced solution.

A safe and compliant workplace

Comfy will support you in fostering the safety, wellbeing and productivity of your employees. Its modular design delivers a premium user experience that meets today's workplace-specific needs.

With a wide range of available features and seamless integration into third party apps and systems, employees can navigate the workplace faster, stay informed on space limitations and get directions to secure locations across your site with turn-by-turn navigation.

Users can book available rooms and desks by searching and finding accessible workspaces, including 'booked' but unused spaces. Plus they can explore available amenities and get all details on the nearest facilities.

To enable up-to-the-minute communications, Comfy has the ability to access the latest company news and transport and traffic conditions with just one simple tap.

Smart workplace decisions

Comfy will address the best mix of work areas for your employees. Importantly it will identify which workspaces are safe and which are most and least utilised, enabling you to allocate resources to best meet the needs of your people.

Comfy Insights is our open and flexible reporting and analytics platform. It combines data from your people, workspaces and systems to provide transparency of key business metrics and areas of opportunity such as real estate investments, potential changes and areas for improvement.

Inform and enable your people with Comfy

Space analytics

Workplace and employee needs vary and our console makes it easy to configure and customise your Comfy requirements by location, building, or campus to maximise reach and promote local services and amenities.

Employee engagement

As well as enabling you to view app engagement data and discover which corporate services and amenities employees prefer, Comfy gives your people better control over their workplace as they can adjust temperature and lighting, submit feedback to workplace teams, and more.

Space utilisation

Management can assess average and peak utilisation for all spaces by day of week and time of day, and importantly view most and least popular spaces. This enables you to balance employee needs against space limitations, establish occupancy limits and reduce people density in the workplace.

Operational efficiency

You can manage the ongoing challenge of continued variability in space usage. In addition, see building performance metrics, including lighting and temperature requests and trends, and identify energy savings opportunities.

Why Siemens?

Siemens acquired the Comfy business in 2018 to further strengthen its portfolio in the delivery of smart buildings. The ability of the app to directly integrate with existing building automation, IT networks and IoT systems has meant that Siemens can offer customers the means to better connect their people, workspaces and systems.

We are focused on introducing emerging digital technologies and innovative solutions that result in a smart, automated environment, offering new ways of working and greater mobility.

Five key reasons why Comfy will enable the changing workplace

Protection matters, come direct to Siemens

Siemens can advise on the appropriate Comfy package to meet your requirements.

We would welcome the opportunity to demonstrate our ability to provide the right solution for your organisation and your people.
