

3WA air circuit breakers: User-performed inspection and maintenance

For highest plant availability

Especially easy

- Specialists can perform the 3WA air circuit breaker inspection themselves.
- Maintenance should only be carried out if wear is detected during inspection; the main contacts, arc chute cover, and arc chutes can usually be replaced by the user.
- It is not necessary to lubricate moving parts and contacts.
- Under certain operating and environmental conditions, the inspection intervals can be extended to a maximum of 4 years.

Especially convenient

- The 3WA air circuit breaker requires very little inspection and maintenance.
- Condition monitoring provides information about the condition of the air circuit breaker and when the next inspection is due.

Especially efficient

Inspection and maintenance performed by the customer without shipping the 3WA air circuit breaker to the factory reduces the downtime of switching devices and switchgear, thus ensuring maximum plant availability at highest system availability at low effort.
