

Environmental & Social Policy

Siemens Mobility EGYPT LLC

At Siemens Mobility Egypt LLC, we are passionate about protecting the environment and creating a greener, more sustainable future for our business, our people, and our planet. We will provide support, advice, and guidance to deliver contracts, ensuring we realise global sustainability targets, whilst achieving legal compliance and assurance. We will:

- Minimize our impact on the environment, continually improve and enhance our environmental performance through an effective management system certified to BS EN ISO14001:2015
- Set environmental targets to deliver our environmental objectives and commitments.
- Identify all significant aspects and impacts across the organization that have the potential to impact the environment and will put suitable control measures in place to reduce harm to as low as reasonably practicable.
- Implement effective programs to prevent pollution, minimize nuisance and protect cultural heritage.
- Measure and minimize fuel and energy consumption throughout our estate and within our operations and will design our operations to maximize efficiency and minimize wastage.
- Procure renewable energy for our managed estate and will promote the use of alternative- powered plant and equipment within our operations.
- Identify opportunities to enhance and protect biodiversity and reduce loss of nature.
- Embed circular economy principles in all our operations to minimize carbon, waste and harmful materials.
- Measure and minimize the environmental impact of the whole life cycle of plant, equipment, and other physical assets by reducing the use of energy and finite resources in all business activities.
- Minimize waste production and implement the waste hierarchy in all areas of the business
- Measure and minimize water consumption and ensure systems are in place to prevent wastage and recycle water where practicable.
- Actively work with our supply chain and landlords to identify their potential impacts on the environment and ensure they have the knowledge to manage and prevent them.
- Ensure that environmental performance forms part of the assessment criteria when selecting and working with suppliers.
- Report and investigate environmental incidents and hazard spots identifying root causation. Engage with our people and stakeholders in our work at the earliest stages and throughout on an ongoing basis, when considering environmental protection and performance.
- Ensure the competence of our people by supplying information, training and support to enable them to protect the environment and improve performance, including open access to our documented Environmental Management System.
- Facilitating informal, energized, team-working culture between all parties on the project and a workforce which is better trained, more fully empowered, highly motivated, and personally fulfilled.
