

CONNECTING AN ALL-ELECTRIC WORLD

SIEAERO – The next generation of overhead line inspection

Michael Wernlein | Head of Business Development SIEAERO

Claudia Windisch | Head of Research Group Active Vision Technologies

Today, TSOs and utilities inspect their power lines with helicopters at least once a year

SIEMENS
Ingenuity for life

Hot Spots

Bird Nests

Right-of-Way

Kites/Balloons

Aerial Marker Balls

Insulators

SIEAERO leverages UAVs and artificial intelligence to revolutionize overhead line inspection services

Today
Current inspections via helicopters are

- Inaccurate** 
- Slow** 
- Mainly manual work** 
- Dangerous** 

SIEAERO
Next generation service with the following features

- More precise**
- Faster**
- Automatic detection and evaluation**
- Integrated**
- Safer**
- More cost efficient**

Multi-Sensor System
Integrated system with highest resolution (incl. patents)

More precise / more comprehensive

Artificial Intelligence
Advanced algorithms due to domain know-how

Faster, automated, more cost effective

Cloud Computing and Customer System Integration
Highest data security

Integrated

Helicopter
(Short Term) 

Long Range UAV
(Mid Term)
Most advanced UAV, partner-ships 

Safer

Multi-Sensor System

Sensor data

All sensors are integrated in one multi-sensor system to record all data in one go

Up to five 100 megapixel ultra-high definition color cameras

LIDAR 3D laser scanner
Aprx. 120 points/ m²

Corona sensors

Infrared sensors

- Up to 100 GB of data per km of overhead line (160 GB per mile)
- Highly accurate geo-referenced 3D localization of all sensor data

Best in class sensors

SIEMENS
Ingenuity for Life

SIEAERO

Example: Insulator Defects

Can you spot the damaged insulator?

Manual inspection during a helicopter fly by is a difficult and laborous task → especially for small-sized damages, automation is a huge benefit

Analytic Algorithms – The Perceptual Core Deep Dive!

A 3D DIGITAL TWIN is automatically generated with classified, georeferenced components

Color image

Identified components

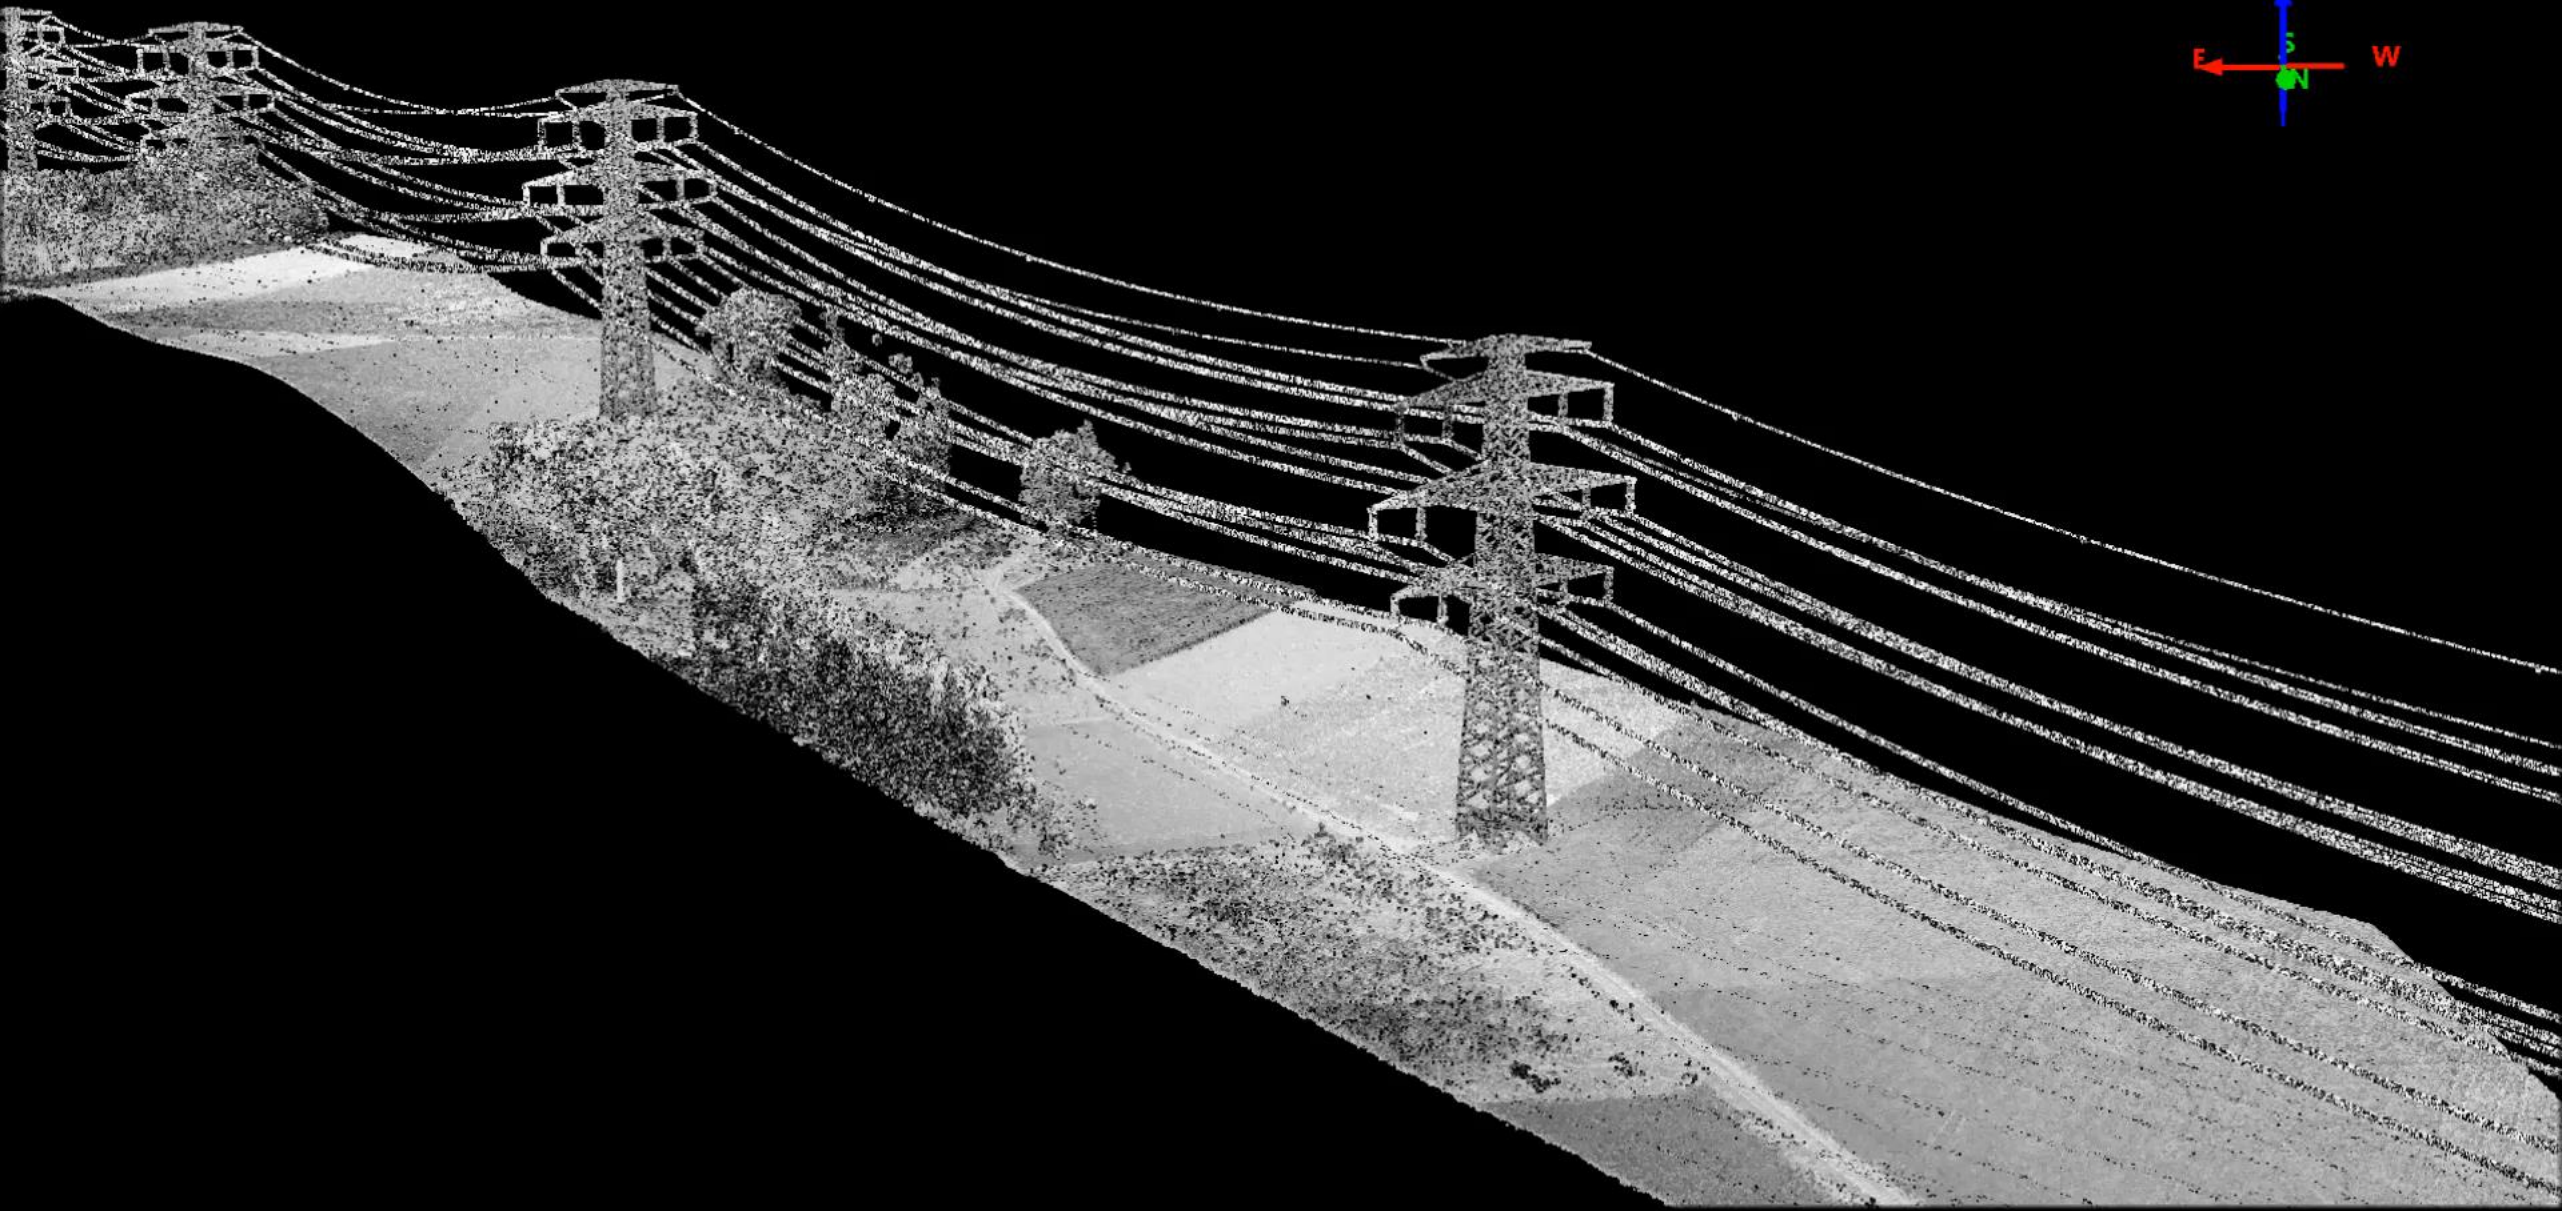

Using Artificial Intelligence / Deep Learning

Consolidate 2D Detections in 3D GeoSpace

3D DIGITAL Twin / Inventory

A 3D DIGITAL TWIN is automatically generated with classified, georeferenced components

SIEMENS
Ingenuity for life

Examples of identified and classified components

Composite Insulator

Ceramic Insulator

Glass Insulator

Aerial Marker Ball

Vibration Damper

2-bundle spacer

3-bundle spacer

4-bundle spacer

Bird protector

Bird nest

Using artificial intelligence and deep learning methods (2D / 3D)

Component Inspection / Defect Classification using Image Processing and Deep Learning

Addressed Applications

Ceramic Insulator Inspection

- Detection of chippings

Glass Insulator Inspection

- Detection of missing shells

Vibration Damper Inspection

Vibration Damper – Mass Drooping

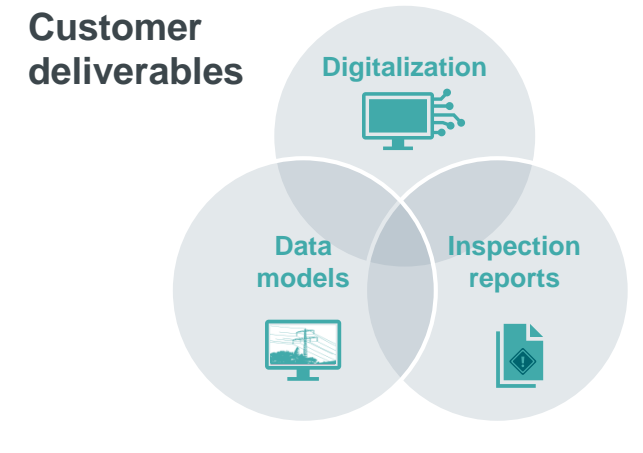

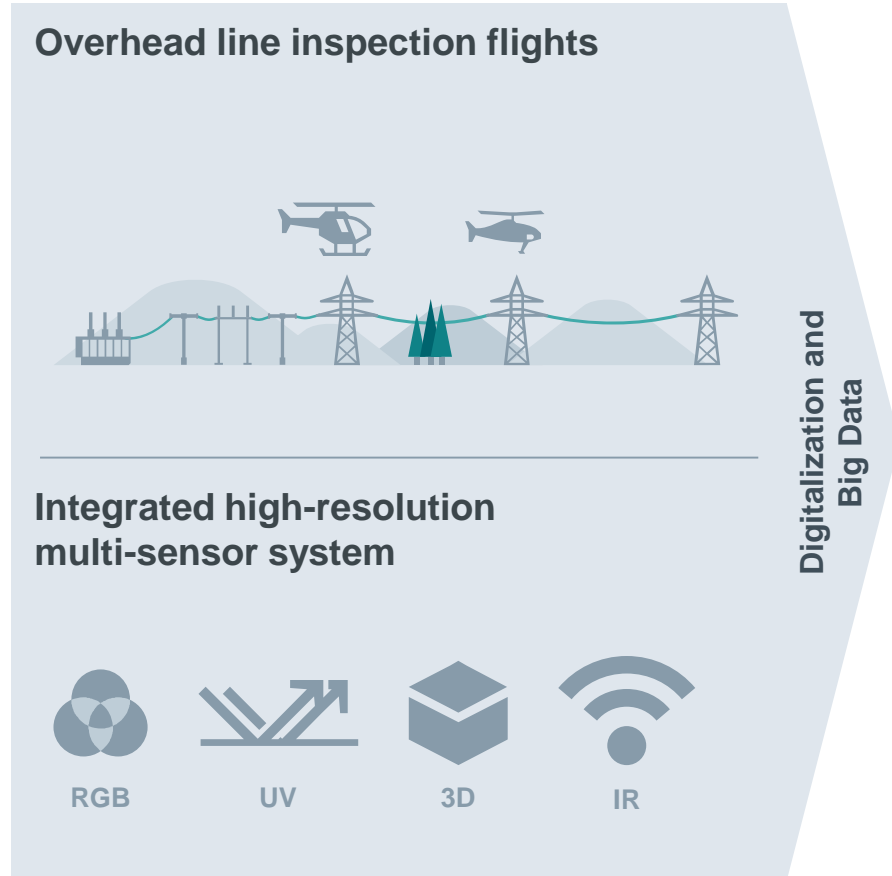

- Detection of missing damper mass
- Detection of drooping damper mass

Damages on Aerial Marker Balls

- Detection of missing shells
- Can only either shatter completely or remain intact

SIEAERO service in a nutshell

Customer benefits

More precise	Integrated
Faster	Safer
Automatic detection and evaluation	More cost efficient

SIEAERO is already up in the air!
