CUD Kits for SINAMICS DCM DC drives

Bundle control units and connector boards at a reasonable cost

usa.siemens.com/sinamics-dcm

Four CUD (Control Unit DC) Kits are available for SINAMICS DCM DC drive products that bundle the available control units and connector boards at a reasonable cost.

Background

Per page 3/33 in [Catalog D23.1, Edition 2020](#), the Standard CUD and Advanced CUD are available as uncoated or coated (to improve the reliability for increased degrees of pollution and climatic stressing) printed circuit boards. Each CUD can be inserted in either the left or right slot of the electronics tray inside the SINAMICS DCM product.

The Standard CUD and Advanced CUD are meant to be replacements (upgrade or spare) for the CUD supplied with the DC Converter, Base Drive or Control Module.

The CUDs do not include the connector board, screws or studs.

To upgrade a SINAMICS DCM product with an additional CUD, the customer will need to purchase both the spare CUD and

the connector board. The connector board comes with all of the screws and studs to mount the CUD in the product.

Structure

The circuit boards are packaged in boxes and delivered in one shipment.
