

FACT SHEET SIEMENS XCELERATOR IN SPAIN

# Coca-Cola Europacific Partners (CCEP)

Coca-Cola Europacific Partners (CCEP) is the largest independent bottler by revenue for the Coca-Cola Company.

**SIEMENS**

# Basic information

- Coca-Cola Europacific Partners (CCEP) is the largest independent bottler by revenue for the Coca-Cola Company.
- It produces, markets and distributes its products in Western Europe, Australia, Indonesia and the Pacific Islands. The whole group has two million customers in 29 countries.
- CCEP's Iberia Business Unit, which includes Spain, Portugal and Andorra, has seven soft drink bottling plants and four mineral water plants. In Spain, CCEP has more than 270,000 customers.
- In 2022, CCEP generated sales of €17.3 million, an increase of 26 percent compared to the previous year. In Europe, the figure was €13.5 million (up 17 percent compared to 2021).
- From Q1 to Q3 2023, CCEP generated €13.784 million, of which Europe accounted for €11.06 million and Iberia for €2.570 million (up 10 percent year-on-year).
- CCEP employs around 33,000 people in 29 countries with around 3,600 of these employees in Spain.

# Technology and customer needs

- In the area of climate, CCEP has set the goal of becoming a Net-zero company by 2040 across its entire value chain across all its markets – ten years before the European Union’s objective. To achieve this goal, CCEP has established a roadmap that includes reducing its carbon footprint in all areas of its activities.
- CCEP’s general goal is to lower the environmental impact of production by reducing the consumption of energy, water, raw materials and, of course, the reduction of CO<sub>2</sub>.
- Siemens Spain won a tender by applying its competitive Energy Manager PRO digital software. The project is being coordinated and carried out completely from Spain and is helping to improve CCEP Seville plant’s operations.
- The Seville plant has a maximum capacity of production of more than 700 million liters of soft drinks, near of 94,000 square meters, comparable to 13 football fields, and is equipped with 12 production lines.

# Siemens Technology

- Siemens' Energy Manager PRO software has been implemented to monitor the energy and consumption at CCEP's Seville site, which is able to monitor these relevant KPIs, enabling a complete market analysis of the site.
- The company's management can analyze this data directly. This project will first be fully coordinated and implemented in Seville. It monitors water, electric energy, steam, natural gas, CO<sub>2</sub> and compressed air.
- The first step was to modernize and digitalize the plant in Seville. 225 measuring points have been installed at the plant. This technology is also now being implemented in part of Germany and Benelux.
- The aim of the energy management system is to obtain strategic data to make profitable and sustainable decisions for the company. To this end, Siemens offers customer services that include a comprehensive design service, tool support and data analysis. The aim is to provide the best digitalization solutions by detecting anomalies.
