Introduction

This bulletin has been issued as notification of an issue with the Chrome web browser when viewing the contents of the Site Information Export on ST950 and Stratos Outstation.

Scope

This affects all versions of ST950 and Stratos Outstation when using the Chrome web browser.

Procedure

Due to recent changes to the Chrome web browser, we have found that it can no longer be reliably used to view the contents of the Site Information Export

This is because when the contents of the Site Information Export ZIP file are extracted, if the 'index.html' file is opened in Chrome, most of the links in the index displayed are not able to be opened. (It appears that Chrome cannot, or refuses to, open links that refer to local files - even though the page is already open from the same folder).

The work around to this issue in Chrome is therefore to open the 'index.html' file in a different browser, such as Firefox. Alternatively open the linked files directly rather than using the links on the index page.

Related Documents

Details on the Site Information Export can be found in section 9 of the 'User Interface Handbook' 667/HU/46000/000.
