

# Network Implementation Services

Confidence from the start

**Communication  
networks are  
critical to  
organizations  
seeking to maintain  
their competitive  
edge in today's  
dynamic industrial  
environments.**

**SIEMENS**

For this reason,  
minimizing the  
potential of network  
malfunction should  
be a top priority for  
leading industrial  
companies.

SIEMENS

**Priority #1**

**Priority #2**

**Priority #3**

Avoiding industrial network failures starts with **smooth, seamless implementation of network projects.**

**Siemens' Network Professional Services team brings extensive vertical market expertise to bear when implementing complex communications solutions.**

**SIEMENS**

Partnering with our Network Professional Services team helps ensure uninterrupted network performance and future network readiness.

**SIEMENS**

Our market-leading portfolio of durable, standards-based communication technologies enables us to deliver integrated network solutions that meet your specific organizational needs.

**SIEMENS**

Our primary goal is to get your industrial network up and running quickly, securely and reliably so you can avoid costly delays and downtime.

**SIEMENS**

# Network implementation services can include:

- ☒ Configuration of hardware to align with project specifications.
- ☒ Hardware specification documentation.
- ☒ Staging and testing of equipment.
- ☒ Software installation, commissioning and configuration.

On-site employee training on the usage and configuration of vital hardware and software can also be included.

**SIEMENS**

An on-site network engineer, with extensive experience in industrial communication networks and Siemens solutions, ensures that implementation projects proceed smoothly and on time.

Before network implementation begins, Siemens holds in-depth “discovery” sessions with you and your team to ensure that we understand your system architecture, network design, and overall goals.

**SIEMENS**

During this discovery phase, we will ask questions to make sure we understand the equipment already in place and how well the current network / system is operating.

Before our work begins, it's critical to uncover any existing issues or challenges so these can be addressed in the implementation process.

**SIEMENS**

Siemens' network  
implementation services are  
**highly customized** to meet  
the specific needs of each  
customer.

By engaging Siemens' Network Professional Services team for your next implementation project, you'll benefit from improved ramp-up of new networking systems.

**SIEMENS**

Our engineers have decades of industrial application experience, training, and up-to-date network certifications. This translates into smooth, successful, and hassle-free network implementation projects for our customers.
