

Siemens Mobility to deliver 14 light rail trains to Phoenix

- **Valley Metro orders 14 additional light rail vehicles from Siemens Mobility**
- **Improved availability and enhanced passenger experience**

The Valley Metro Regional Public Transportation Authority has ordered 14 S700 light rail vehicles (LRV) from Siemens Mobility. The new trains will operate in Phoenix, Arizona, in the U.S. They will be built at the Siemens Mobility facility in Sacramento, California. Valley Metro previously ordered 11 light rail trains from Siemens Mobility in 2017.

“Additional light rail fleet supports our mission of connecting communities, especially as we close in on the 2024 completion date of South Central Extension/Downtown Hub,” said Scott Smith, Valley Metro CEO. “As our transit system grows, so must our fleet to accommodate new miles of service and additional riders across metro Phoenix.”

“Phoenix is currently the fifth largest city in the U.S. and is continuing to grow steadily. As urbanization accelerates, sustainable transport systems are becoming more important than ever – and we very much welcome Valley Metro’s decision to expand the city’s public transportation system. Siemens Mobility will deliver light rail trains that provide greater passenger comfort and improved availability,” said Albrecht Neumann, CEO of Rolling Stock at Siemens Mobility.

The S700 light rail trains offer a spacious interior, energy-efficient LED lighting, generous storage space for bicycles, and a powerful air conditioning system that

ensures passenger comfort even when dealing with high outdoor temperatures. The improved performance and optimized availability of the trains is achieved with condition-based monitoring, data analytics and predictive maintenance.
