

KeepSecure!

The MindSphere application for the management of your Security Reports as part of a Managed Security Service

Quickly retrieve your Security Reports to get insights into your security status.

If you choose Industrial Security Monitoring or Perimeter Firewall Management as part of the Plant Security Services portfolio, the Siemens Cyber Security Operation Center (CSOC) will provide continuous monitoring of your systems and plant. The security status of the monitored systems will result periodically in the generation of security reports that will be available and accessible via the KeepSecure! MindApp. The application will offer other various features such as the Industrial Security Alerts provided by the Siemens ProductCERT, the Cyber Emergency Readiness Team.

Making Industrie 4.0 more secure

Our Defense-in-Depth strategy raises the level of security to let you benefit from the opportunities of Industrie 4.0 without having to tolerate avoidable risks. Active Security gives you an overview of your plant's security, everywhere and at all times.

Stefan Woronka, Head of Product Management for Plant Security Services, Siemens Digital Factory Division, Nuremberg, Germany
