

Networks with SCALANCE

Industrial Networks Education

Description

It is difficult to imagine day-to-day industrial operations without Ethernet connections. From large-scale production systems to the smallest Industrial Ethernet communication networks, nearly everything has come to depend on their reliability and security. The opportunities on the one hand are countered by risks on the other hand. Access by outsiders or manipulations in the network always have catastrophic consequences for production or in-house expertise. Therefore, functioning security systems are an absolute must.

With the training module "Security in Industrial Networks" of the Industrial Networks Education - Certification Program, you will learn the potential dangers and risks in industrial networks and how to assess them.

General Information

Course Code: IEN-SECINS1A Length: 3 Days

Audience

This course is for users who are involved with developing or sustaining automation networks in an industrial environment. This includes, but is not limited to the following:

- Plant Engineers
- Control Engineers
- System Engineers
- Commission Engineers
- Application Engineers
- Operations or IT Network Engineers
- Facility Managers
- Project Engineers

Prerequisites

- Basic knowledge of the topic "Ethernet".
- Familiar with network topologies, transfer processes, addressing, data transport, and understand the associated technical vocabulary.
- Familiar with the principles of router operations, switches and an OSI reference model.
- Recommended: Completion of the web-based Initial Training for Industrial Networks (ITIN) course.

Profile

This course is one of three certification courses offered under the Siemens Certified Professional for Industrial Networks (CPIN) program. The curriculum includes an introduction of the potential threats and risks associated with industrial networks, as well as a deep dive into defense in depth strategies. Students will be shown numerous ways to implement access control measures to protect and mitigate security incidents.

Throughout the course, students will have ample time for practical exercises, diagnostics, and troubleshooting. The course uses a hands-on model for realistic demonstrations.

At the end of the course, students are equipped with the knowledge to plan, configure, implement and provide support for industrial security measures in automation networks.

Objectives

Upon completion of this course, the student will learn:

- Current trends and security risks
- Defense in depth strategies
- Update and replacement of security components
- Potential threats in a network
- Basic security measures (ports, passwords, protocols, etc.)
- Network segmentation (VLAN, routing)
- Cell protection concept
- Access restriction
- Remote access via VPN
- Diagnostics / troubleshooting
- Comprehensive exercises using the SIMATIC NET product portfolio

Topics

- 1. Comprehensively protecting productivity
- 2. Maintenance
- 3. Risks
- 4. Basics of security
- 5. Cell protection
- 6. Access protection
- 7. Standard machines
- 8. Remote maintenance

Certification (Siemens CPIN-LEVEL)

This training prepares for the certification "Siemens Certified Professional for Industrial Networks -Switching and Routing". A voluntary certification examination which consists of two sections will take place at the end of the training.
