

SHORT DESCRIPTION

Siemens and Energie Lindner GmbH - a strong partnership: Siemens technology combined with the know-how and expertise of Energie Lindner brings transparency to power distribution for more energy efficiency and more sustainability in your company.

JOINT VALUE PROPOSITION

- + Transparency in low-voltage power distribution**
Based on Siemens technology, Energie Lindner measures and visualizes the energy data: SENTRON Digital – these are SENTRON PAC measuring devices, and communication capable protection devices as well as the energy monitoring software solutions SENTRON Powermanager and SENTRON Powercenter.
- + Digital service for increased energy efficiency**
By designing an individual measurement concept, installing it and configuring the energy data software, Energie Lindner enables data analysis and the discovery of savings potential. Mobile measurements enable maximum flexibility in consumption determination and network analysis.
- + Auditing acc. ISO 50 001**
The effective and efficient implementation of internal and external audits in accordance with ISO 50 001 improves energy efficiency and helps saving costs. An individual analysis discovers savings potential. By identifying and implementing optimization measures processes and operation costs are optimized.

”

For more than 10 years I have been passionately dedicating myself to the very important field of energy management. As a certified energy manager, I'm happy to support you with my expertise in energy management certified according to ISO 50 001.

– Josef Lindner, CEO Energie Lindner GmbH
