We take care of ourselves as well as of our environment

Siemens, s.r.o. policy related to environmental protection, health management and occupational safety

Siemens is committed to excellence in environment protection, health management, and occupational safety (EHS). EHS is actively lived as a shared value and is an integral part of all decisions, activities carried out, and collaboration with external partners.

We acknowledge our responsibility to address long-term global challenges, such as demographic change, and diminishing resources. We strive to be socially responsible by conducting our business in ecologically and socially sustainable way and to foster a culture where everyone participates and takes responsibility for creating safe and healthy working conditions for everyone.

Program Eco Efficiency@Siemens

The EHS Program Eco Efficiency establishes a systematic framework to help you support the development of eco-efficient solutions and innovations for our customers, suppliers and own operations. This includes our contributions to advancing Siemens' climate, zero pollution, biodiversity and water strategies.

Program Healthy and Safe@Siemens

The Program Healthy and Safe is about empowering all our people to lead better, learn from each other, foster well-being and innovate the health and safety of work. Each person can make a difference in creating a healthy and safe workspace.

Environmental Management System (EMS) and Occupational Health and Safety Management System (OHSMS)

The company implemented and maintains a system for the protection of the environment according to ISO 14001 and an occupational safety system according to ISO 45001. They support continuous performance improvement of our relation to the environment and prevention of injuries.

How can you get involved in and apply this policy?

- ✓ Approach the protection of environment, occupational health and safety actively.
- ✓ Act in accordance with the above-mentioned principles.
- ✓ Respect the statutory and corporate requirements leading to lower safety risks and protection of the environment.
