Siemens to be climate neutral by 2030

• CO₂ emissions to be cut 50 percent as early as 2020
• €100 million investment in improving energy efficiency
• Annual savings of €20 million expected

Siemens aims to be the world’s first major industrial company to achieve a net-zero carbon footprint by 2030. The company plans to cut its carbon dioxide (CO₂) emissions – which currently total about 2.2 million metric tons a year – in half by as early as 2020. To achieve these goals, Siemens will invest some €100 million over the next three years in order to reduce the energy footprint of its production facilities and buildings.

By investing in innovative technologies – such as energy management systems and automation systems for buildings and production processes as well as energy-efficient drive systems for manufacturing – Siemens expects to slash its energy costs by €20 million a year. “Cutting our carbon footprint is not only good corporate citizenship, it’s also good business”, said Joe Kaeser, President and CEO of Siemens AG.

To reduce its CO₂ emissions over the long term, the company will also apply three additional levers. First, it will use distributed energy systems at its production facilities and office buildings to optimize energy costs. Second, it will systematically employ low-emission vehicles and e-mobility concepts in its global car fleet. And third, it will move toward a clean power mix by increasingly tapping sources of energy – such as natural gas and wind power – that emit little or no CO₂.

Siemens will launch its CO₂ reduction program next fiscal year. Under the program, some €40 million will be invested at 15 different manufacturing locations worldwide to improve energy efficiency. Siemens’ new Munich headquarters building – which is
to meet the highest standards for environmental friendliness, resource conservation and sustainable construction – will make a major contribution in this regard.

Siemens’ Environmental Portfolio bundles the company’s technologies in the area of energy efficiency and CO₂ reduction. In fiscal 2014, the Portfolio generated sales of €33 billion, or 46 percent of Siemens’ total revenue. Solutions from Siemens enabled customers to reduce their CO₂ emissions by 428 million metric tons – an amount equal to half of Germany’s total carbon dioxide emissions.

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 165 years. The company is active in more than 200 countries, focusing on the areas of electrification, automation and digitalization. One of the world’s largest producers of energy-efficient, resource-saving technologies, Siemens is No. 1 in offshore wind turbine construction, a leading supplier of combined cycle turbines for power generation, a major provider of power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. The company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2014, which ended on September 30, 2014, Siemens generated revenue from continuing operations of €71.9 billion and net income of €5.5 billion. At the end of September 2014, the company had around 343,000 employees worldwide on a continuing basis. Further information is available on the Internet at www.siemens.com.
NOTES AND FORWARD-LOOKING STATEMENTS

This document contains statements related to our future business and financial performance and future events or developments involving Siemens that may constitute forward-looking statements. These statements may be identified by words such as “expect,” “look forward to,” “anticipate,” “intend,” “plan,” “believe,” “seek,” “estimate,” “will,” “project” or words of similar meaning. We may also make forward-looking statements in other reports, in presentations, in material delivered to shareholders and in press releases. In addition, our representatives may from time to time make oral forward-looking statements. Such statements are based on the current expectations and certain assumptions of Siemens’ management, of which many are beyond Siemens’ control. These are subject to a number of risks, uncertainties and factors, including, but not limited to those described in disclosures, in particular in the chapter Risks in the Annual Report. Should one or more of these risks or uncertainties materialize, or should underlying expectations not occur or assumptions prove incorrect, actual results, performance or achievements of Siemens may (negatively or positively) vary materially from those described explicitly or implicitly in the relevant forward-looking statement. Siemens neither intends, nor assumes any obligation, to update or revise these forward-looking statements in light of developments which differ from those anticipated.

This document includes – in IFRS not clearly defined – supplemental financial measures that are or may be non-GAAP financial measures. These supplemental financial measures should not be viewed in isolation or as alternatives to measures of Siemens’ net assets and financial positions or results of operations as presented in accordance with IFRS in its Consolidated Financial Statements. Other companies that report or describe similarly titled financial measures may calculate them differently.

Due to rounding, numbers presented throughout this and other documents may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.

This document is an English language translation of the German document. In case of discrepancies, the German language document is the sole authoritative and universally valid version. For technical reasons, there may be differences between the accounting records appearing in this document and those published pursuant to legal requirements.
