

7 Keys to Know: Creating healthcare environments that care

- 01 Define your organization's security objectives.
- 02 Determine your perimeter security needs.
- 03 Control access into and out of the hospital buildings and critical secured areas.
- 04 Install intelligent, analytical video systems that record events and alert you to concerns.
- 05 Integrate systems so access control, video, and command & control systems create efficiencies and better situational awareness.
- 06 Have an effective mass notification system in place for communicating with patients, clinicians, staff, and hospital visitors.
- 07 Service and maintain security systems to ensure proper operations.
