

Product Return for Disposal Program

WHAT

Siemens has partnered with CleanAway to offer an end-of-life, fee-for-service solution for our customers and partners to dispose of e-waste originating from Siemens products, in an environmentally responsible manner.

WHY

Siemens is committed to minimising the environmental impact of our products across their lifecycle. As part of our ISO 14001 certification, Siemens strives to drive sustainable growth and help our customers and partners achieve their goals while using fewer resources. The Siemens Product Return for Disposal Program is aligned with our global DEGREE framework, which sets out systematic and measurable targets for environment, social and governance (ESG) topics.

THE PROCESS

1.ASSESSMENT

An initial enquiry should be sent via email to the Siemens EHS team. After an assessment of the e-waste is completed, CleanAway will provide a quote. The cost of the service is the responsibility of the customer or partner, and will vary depending on the type and quantity of e-waste.

2.COLLECTION

CleanAway’s network of e-waste disposal providers allow for the coordinated collection of e-waste of all sizes. Once the waste is ready for collection, CleanAway can pick it up from premises anywhere in Australia for recycling.

3.RECYCLE

Manual and automated processes are then used to maximise the recovery rate of recyclable items. CleanAway can provide certificates of recycling upon request, helping to meet ISO 14001 and other environmental policies.
