Multifunction Protection Relays SIPROTEC 5

Product group: Transformer Differential Protection
7UT82, 7UT85, 7UT86, 7UT87

Firmware V07.80

Tests are according to:

IEC/EN 60255 series, VDE 0435

Further standards s. specific tests

Performed tests:

Properties at reference conditions

Test results:

The equipment has successfully passed the type test. The equipment did not show any changes and was fully in order subsequent to these tests.

Range of validity**SIPROTEC 5 Platform and Hardware Characteristics**

The SIPROTEC 5 series includes both modular and non-modular devices.

Modular devices consist of a base module (1/3 of 19 inches) and can be expanded with expansion modules (1/6 of 19 inches). The device type identifier for modular devices is XXX85, XXX86 or XXX87, for example, 7SA86. Type XXX84 devices have the same hardware properties as the modular devices, but they cannot be expanded with expansion modules.

All non-modular devices consist of just a base module (1/3 of 19 inches) and cannot be expanded with expansion modules (1/6 of 19 inches). The device type identifier for non-modular devices is 7XX82, e.g., 7SJ82.

Hardware Characteristics of Modular Devices

A modular device always consists of a base module and optionally of expansion modules. The modules can be chosen according to hardware characteristics. These characteristics are:

- Module size
- Type of construction
- Mounting of the on-site operation panel
- Layout (or design) of the on-site operation panel
- Input and output module
- Plug-in modules

The modules are available in 2 sizes:

- Base module (1/3 of 19 in)
- Extension module (1/6 of 19 in)

The devices are available in 3 designs:

- Flush-mounting devices with on-site operation panel fitted directly on the device
- Surface-mounting devices with integrated on-site operation panel
- Surface-mounting devices with detached on-site operation panel

The on-site operation panels of the base modules can be selected from 3 variants:

- With a large display, keypad, and 16 2-colored LEDs
- With a small display, keypad, and 16 2-colored LEDs
- Without a display, without a keypad, but with 16 2-colored LEDs

The on-site operation panels of the extension modules can be selected from 4 variants:

- With 16 1-colored LEDs and 2 key switches
- With 16 1-colored LEDs
- With 8 push-buttons and 8 1-colored LEDs
- Without display elements

The base module always contains the power-supply module PS201 and an input and output module IO2XX.

The extension module contains an input and output module IO2XX or a plug-in module assembly with integrated power supply CB202.

The 1st extension module in the 2nd device row always contains power supply module PS203.

The plug-in modules are available for various applications. The following plug-in modules can be installed in the base module or in an extension module with plug-in module assembly with integrated power supply CB202:

- Communication module
- Measuring-transducer module

Range of validity**Hardware Characteristics of Non-Modular Devices**

A non-modular device always consists of just one module (1/3 of 19 inches) and cannot be expanded with expansion modules (1/6 of 19 inches). These hardware characteristics are:

- Module size: 1/3 of 19 in.
- Type of construction: Flush-mounting devices with on-site operation panel fitted directly on the device

The on-site operation panels can be chosen from 2 variants:

- With a large display, keypad, and 16 2-colored LEDs
- With a small display, keypad, and 16 2-colored LEDs

The module always contains the power supply module PS101 and an input and output module IO10X. The input and output module IO10X includes the terminals for current and voltage transformers. Optionally, the module can be equipped an additional input and output module IO110 for extra binary inputs and outputs. The plug-in modules are available for various applications. The following plug-in modules can be installed in the module:

- Communication modules
- Measuring-transducer modules

Range of validity**SIPROTEC 5 devices**

All type tests were performed at various combinations of all modules of the SIPROTEC 5 platform. As a result the following devices were covered:

7UT82	
Short description	Differential protection for two-winding transformers for all voltage levels
Main protection function	1 differential protection function (standard transformer) with additional stabilization; up to 2 restricted ground-fault protection functions
Usable measuring points	Two 1-phase current measuring points Two 3-phase current measuring points
Inputs and outputs	One predefined standard variable with 8 current transformers, 7 binary inputs,
Hardware flexibility	6 binary outputs
Width of housing	1/3 x 19 inches

7UT85	
Short description	Differential protection for two-winding transformers for all voltage levels
Main protection function	1 differential protection function (standard or auto transformer) with additional stabilization; up to 2 restricted ground-fault protection functions
Usable measuring points	Five 3-phase current measuring points Three 1-phase current measuring points Three 3-phase voltage measuring points Three 1-phase voltage measuring points
Inputs and outputs	2 predefined standard variants with 8 current transformers,
Hardware flexibility	7 to 19 binary inputs, 7 to 23 binary outputs Flexible adaptable and expandable I/O quantity structure of the modular SIPROTEC 5 module
Width of housing	1/3 x 19 inches to 1/1 x 19 inches

7UT86	
Short description	Differential protection for three-winding transformers for all voltage levels
Main protection function	1 differential protection function (standard) with additional stabilization; up to 3 restricted ground-fault protection functions For auto transformer applications 2 differential protection functions can be processed in an auto transformer function group.
Usable measuring points	Six 3-phase current measuring points Four 1-phase current measuring points Four 3-phase voltage measuring points Four 1-phase voltage measuring points
Inputs and outputs	2 predefined standard variants with 12 current transformers, 4 voltage
Hardware flexibility	transformers, 11 to 23 binary inputs, 19 to 34 binary outputs Flexible adaptable and expandable I/O quantity structure of the modular SIPROTEC 5 module
Width of housing	1/2 x 19 inches to 1/1 x 19 inches

Range of validity

7UT87	
Short description	Differential protection for multi-winding transformers for all voltage levels
Main protection function	Up to 2 differential protection functions with additional stabilization (in different transformer function groups); up to 5 restricted ground-fault protection functions. For auto transformer applications 2 differential protection functions can be processed in an auto transformer function group
Usable measuring points	Nine 3-phase current measuring points Five 1-phase current measuring points Five 3-phase voltage measuring points Five 1-phase voltage measuring points
Inputs and outputs Hardware flexibility	2 predefined standard variants with 20 current transformers, 4 voltage transformers, 15 to 27 binary inputs, 22 to 38 binary outputs Flexible adaptable and expandable I/O quantity structure of the modular SIPROTEC 5 module
Width of housing	2/3 x 19 inches to 1/1 x 19 inches

Range of validity**SIPROTEC 5, functional description of power supply, CPU, IO boards and plug-in modules**

All hardware type tests were performed at various combinations with all modules of the SIPROTEC 5 platform. As a result all realized devices were covered:

SIPROTEC 5**Functional description of boards for modular devices**

Board name	Functional description
PS201	Power Supply Board (DC: 24 V/48 V or 60 V to 250 V and AC: 100 V to 230 V), mounted in 1/3 19-inch size housing, including 3 binary inputs, 2 binary outputs and one status life contact
PS203	Power Supply Board for the 2 nd row of devices, (DC: 24 V/48 V or 60 V to 250 V and AC: 100 V to 230 V), mounted in 1/6 19-inch size housing
CB202	Plug-in module assembly, including an additional power supply, (DC: 24 V/48 V or 60 V to 250 V and AC: 100 V to 230 V), mounted in 1/6 19-inch size housing
CP300	Processor (CPU) Board, mounted into the front cover of the 1/3 19-inch size housing, different variants for the available device designs
IO201	Input Output Board, 4 current inputs, 8 binary inputs, 6 binary outputs, reduced assembled variant of IO202
IO202	Input Output Board, 4 current measuring inputs, 4 voltage measuring inputs, 8 binary inputs, 6 binary outputs, mounted in 1/6 or 1/3 19-inch size housing
IO203	Input Output Board, 8 current measuring inputs, 4 binary inputs, 4 binary outputs, mounted in 1/6 19-inch size housing
IO204	Input Output Board, 10 binary inputs, 4 binary outputs, 4 power relays for controlling 2 motors, mounted in 1/6 19-inch size housing
IO205	Input Output Board, 12 binary inputs, 16 binary outputs, mounted in 1/6 19-inch size housing
IO206	Input Output Board, 6 binary inputs, 7 binary outputs, mounted in 1/6 19-inch size housing, reduced assembled variant of IO205
IO207	Input Output Board, 16 binary inputs, 8 binary outputs, mounted in 1/6 19-inch size housing
IO208	Input Output Board, 4 current measuring inputs, 4 voltage measuring inputs, 4 binary inputs, 11 binary outputs, mounted in 1/3 or 1/6 19-inch size housing
IO209	Input Output Board, 8 binary inputs, 4 High Speed Outputs, mounted in 1/6 19-inch size housing
IO210	Input Output Board, 4 current measuring inputs, 3 voltage measuring inputs, 7 binary outputs, 4 high-speed measuring-transducer inputs for current or voltage, mounted in 1/6 19-inch size housing
IO211	Input Output Board, 8 voltage measuring inputs, 8 binary inputs, mounted in 1/6 or 1/3 19-inch size housing
IO212	Input Output Board, 8 high-speed measuring-transducer inputs for current or voltage, 8 binary inputs, mounted in 1/6 19-inch size housing
IO214	Input Output Board, 4 current measuring inputs, 4 voltage measuring inputs, 2 binary inputs, 5 binary outputs, mounted in 1/6 or 1/3 19-inch size housing, reduced assembled variant of IO202
IO215	Input Output Board, 4 current measuring inputs, 4 voltage measuring inputs (designed for a measuring range up to 7.07 V) 8 binary inputs, 6 binary outputs, mounted in 1/6 or 1/3 19-inch size housing
IO230	Input Board, 48 binary inputs, mounted in 1/6 19-inch size housing
IO231	Input Output Board, 24 binary inputs, 24 binary outputs, mounted in 1/6 19-inch

Range of validity

Board name	Functional description
	size housing
IO233	Input Board, 48 binary inputs (a fixed pickup threshold value of DC 105 V applies), mounted in 1/6 19-inch size housing
PB201	Process-Bus Module, 7 LC Duplex interfaces of which one is a service port, mounted in 1/6 19-inch size housing

Functional description of boards for non-modular devices

Board name	Functional description
PS101	Power Supply Board (DC: 24 V/48 V or DC: 60 V to 125 V or DC: 110 V to 250 V and AC: 100 V to 230 V), including 3 binary inputs, 2 binary outputs and one status life contact
IO101	Input Output Board, 4 current inputs, 8 binary inputs, 6 binary outputs, reduced assembled variant of IO102
IO102	Input Output Board, 4 current inputs, 4 voltage inputs, 8 binary inputs, 6 binary outputs
IO103	Input Output Board, 8 current inputs, 4 binary inputs, 4 binary outputs
IO110	Input Output Board, 12 binary inputs, 7 binary outputs
IO111	Temperature module, 12 resistance temperature detectors
CP100	Processor (CPU) Board, mounted into the front cover of the device

Functional description of plug-in modules for modular devices and for non-modular devices

USART-xx ¹ -y ² EL	Serial communication module, electrical connection
USART-xx ¹ -y ² FO	Serial communication module, optical connection
USART-xx ¹ -y ² LDFO	Serial communication module for long distances, optical connection
ETH-xx ¹ -2EL	Ethernet module, electrical connection
ETH-xx ¹ -2FO	Ethernet module, optical connection
ANAI-CA-4EL	Measuring-transducer module
ARC-CD-3FO ³	Arc Protection module

Valid for all firmware and DIGSI versions.

¹ xx: two letters, unique code for the module in the product code of the device

² y: 1 = 1 channel;
2 = 2 channels

³ Not available for Busbar Protection and Fault Recorder

1.1.2 Time specifications and measurements

If not otherwise declared, all specifications/results of pickup/tripping/reset times refer to the output of signals via fast output relays (Type F).

BO = Binary output

Binary outputs:

Number and data acc. to the order variant, see also general diagrams of devices

1.1.3 Relay operating times

Switching time (OOT)

OOT (Output Operating Time): additional delay of the output medium used

Type S = standard relay

OOT:

Closing time: typical: 8 ms; maximum: 10 ms;
Opening time: typical: 2 ms; maximum: 5 ms;

Type F = fast relay

OOT:

Closing time: typical: 4 ms; maximum: 5 ms;
Opening time: typical: 2 ms; maximum: 5 ms;

Type HS = High-Speed Relay

OOT:

Closing time: typical: 0,2 ms; maximum: 0,2 ms;
Opening time: typical: 9 ms; maximum: 9 ms;
