

Siemens awarded its biggest order in Oman to develop large power and water project

- **Marks the biggest contract for Siemens in Oman and one of the longest service agreements in the oil and gas sector**
- **Complements the country's economic diversification plans**

Highlighting its commitment to supporting Oman in meeting its growing power needs, Siemens has received an order to supply the Duqm Integrated Power and Water project (DIPWP) with gas and steam turbines, long-term power generation services and digital solutions. The total order volume of the contract is in the range of 200 million euros, representing Siemens' largest contract in the Sultanate of Oman. Spanning a period of 25 years, the service contract for the project, marks also one of the company's longest contracts in the oil and gas sector globally. Following completion of the project in 2022, DIPWP will have an installed generating capacity of 326 megawatts in combined-cycle duty and 36,000 cubic meters of desalinated water for Duqm refinery and petrochemical facilities per day.

The plant is set to meet the requirements of the new refinery and petrochemical complex under development at the Duqm Special Economic Zone in Oman, complementing the country's economic diversification plan and focus on building up its industrial sector. The Siemens scope of supply includes a combined cycle power plant consisting of five SGT-800 industrial gas turbines, five SST-300 industrial steam turbines, and the corresponding control system. Additionally, the project scope includes Siemens' cybersecurity solutions to improve asset visibility, reliability and security, while decreasing operation and maintenance costs.

Eng. Abdullah Al Hashimi, Project Director of DIPWP, said: “Oman aims to build a robust and diversified energy system that can support its long-term, sustainable economic development. We are committed to supporting the country in realizing this vision with projects that set new standards in efficiency and reliability, and can serve as blueprints for other national and regional projects. We are pleased to partner with Siemens on this significant project that will support the industrial zones in the country while preserving natural resources.”

“This is the biggest order ever Siemens achieved in Oman for medium-size gas turbines and the first one in Oman for our SGT-800. Currently, Siemens supports the generation of more than half of Oman’s power supply, enabling the country to optimize gas consumption,” said Jean-Claude Nasr, Senior Executive Vice President, Power Generation at Siemens in the Middle East and North Africa. “Siemens reiterates its firm commitment to continue its support to the growing Omani market with focus on the expansion of localization and Omanisation in the long term, strengthening the country’s economy and creating more jobs for the Omanis,” Nasr added.

“The advanced monitoring and diagnostics services provided to Duqm plant will help maximize performance, lower operating costs and deliver better and more reliable business outcomes for the plant operator,” added Claudia Massei, CEO of Siemens Oman. “We are looking forward to contributing further to Oman’s long-term energy and water strategy, in a sustainable manner.”

Siemens has been operating in Oman since 1972. Today, the company is actively supporting the Sultanate’s diversification plan and executing several key projects in different sectors. The company is actively supporting Oman’s long-term economic growth through the application of technology in the fields of electrification, automation, and digitalization along with the proactive transfer of knowledge and technical expertise.

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 170 years. The company is active around the globe, focusing on the areas of electrification, automation and digitalization. One of the largest producers of energy-efficient, resource-saving technologies, Siemens is a leading supplier of efficient power generation and power transmission solutions and a pioneer in infrastructure solutions as well as automation, drive and software solutions for industry. With its publicly listed subsidiary Siemens Healthineers AG, the company is also a leading provider of medical imaging equipment – such as computed tomography and magnetic resonance imaging systems – and a leader in laboratory diagnostics as well as clinical IT. In fiscal 2018, which ended on September 30, 2018, Siemens generated revenue of €83.0 billion and net income of €6.1 billion. At the end of September 2018, the company had around 379,000 employees worldwide. Further information is available on the Internet at www.siemens.com.
