

### Siemens to equip Egypt's second largest city with ADMS and smart metering infrastructure

- **Siemens to supply two Advanced Distribution Management System (ADMS) for Alexandria Supervisory Control Center and West Alexandria Distribution Control Center**
- **Advanced metering infrastructure, including the supply of 300,000 smart meters, will be established during the project implementation**
- **Alexandria Electricity Distribution Company (AEDC) serves customers in Alexandria, a city with about five million inhabitants**
- **Implementing state-of-the-art software solutions and automation devices will help AEDC to increase efficiency and reliability of the electricity supply, while reducing electricity distribution losses**
- **This project funded by the Japanese International Cooperation Agency (JICA) has a value of about EUR 50 million**

Siemens has been awarded a contract to upgrade the distribution management system and establish an advanced metering infrastructure for Alexandria Electricity Distribution Company (AEDC) – Lot 1 of a JICA-funded loan. As subsidiary of the state-owned utility Egyptian Electricity Holding Company (EEHC), AEDC is responsible for the distribution network of Alexandria Governorate, the second most populated governorate in Egypt. During the upcoming 30 months, Siemens will be implementing an ADMS control center for the West Alexandria region and a control center to supervise all distribution control centers in Alexandria.

In addition, 300,000 smart meters will be supplied, including the necessary hardware and software to establish an advanced metering infrastructure. The implementation of the advanced software solutions for distribution grids, and the rollout of hundreds of thousands of intelligent field devices will help Alexandria

Electricity Distribution Company to increase operational and network efficiency, reduce network loads and losses, and take efficient countermeasures before critical situations arise. Following the partnership agreement signed with ESRI in July 2022, Siemens will also be delivering ESRI's Geographical Information System (GIS) within the scope of the project.

“We are very proud to be awarded a new contract to modernize the electrical grid, because it reconfirms Siemens' commitment to deliver world-class technology to Egypt,” said Mostafa El-Bagoury, Siemens Egypt CEO. “We are also happy to work again with JICA in Egypt. This project truly signifies what Siemens stands for: providing technology with a purpose. With the rollout of hundreds of thousands of intelligent field devices and advanced software applications, we will help the operators to efficiently manage their networks and proactively guide them before and during critical situations.”

“We are very pleased that our customer has chosen Siemens to upgrade the distribution grid in Alexandria with software,” said Sabine Erlinghagen, CEO of Grid Software at Siemens. “Our software helps informed decision-making and operational optimization to effectively reduce the cost of the distribution grid. By visualizing the processes of the distribution grid at all times, our customers are able to control a wide range of grid assets, and take action to prevent critical situations before they happen.”

Between 2015 and 2021, around 28.5 GW of generation capacity was added to the Egyptian power grid, enabling the country to become a power surplus nation. Egypt has also increased its share of renewable energy resources (primarily wind and solar) over the years. The development of the power grid needs to keep pace with the installation of new power generation assets. For the distribution grid, it is important to increase efficiency of the network and to reduce power losses.

**Siemens Smart Infrastructure (SI)** is shaping the market for intelligent, adaptive infrastructure for today and the future. It addresses the pressing challenges of urbanization and climate change by connecting energy systems, buildings and industries. SI provides customers with a comprehensive end-to-end portfolio from a single source – with products, systems, solutions and services from the point of power generation all the way to consumption. With an increasingly digitalized ecosystem, it helps customers thrive and communities progress while contributing toward protecting the planet. Siemens Smart Infrastructure has its global headquarters in Zug, Switzerland. As of September 30, 2021, the business had around 70,400 employees worldwide.

**Siemens AG** (Berlin and Munich) is a technology company focused on industry, infrastructure, transport, and healthcare. From more resource-efficient factories, resilient supply chains, and smarter buildings and grids, to cleaner and more comfortable transportation as well as advanced healthcare, the company creates technology with purpose adding real value for customers. By combining the real and the digital worlds, Siemens empowers its customers to transform their industries and markets, helping them to transform the everyday for billions of people. Siemens also owns a majority stake in the publicly listed company Siemens Healthineers, a globally leading medical technology provider shaping the future of healthcare. In addition, Siemens holds a minority stake in Siemens Energy, a global leader in the transmission and generation of electrical power.

In fiscal 2021, which ended on September 30, 2021, the Siemens Group generated revenue of €62.3 billion and net income of €6.7 billion. As of September 30, 2021, the company had around 303,000 employees worldwide. Further information is available on the Internet at [www.siemens.com](http://www.siemens.com).
