## Siemens launches new servo drive system specifically for the battery and electronics industry

- **Performance optimized, easy to use and future-proof servo drive system**
- **Flexible and compact – scalable depending on the application**
- **Easy engineering thanks to integration in TIA, integrated web server and one-button tuning function**

With Sinamics S200, Siemens is launching a new servo drive system designed for a variety of standard applications in the battery, electronics as well as other industries. It consists of a precise servo drive, powerful servo motors and easy-to-use cables and offers high dynamic performance. Applications that require precision in speed and torque, such as winding and unwinding machines in battery manufacturing and cell assembly, particularly benefit from the new servo drive system. For this purpose, Sinamics S200 offers optimized speed ripple, cogging torque compensation, 17/21-bit ST and 21-bit MT encoders, and cycle-synchronous communication for optimized performance by Profinet IRT in minimum 250us.

The Sinamics S200 servo drive system is also a very flexible system and scalable depending on the application. It covers a power range of 0.1 -1kW (200V) and 0.2 - 7kW (400V) and can be combined with a low, medium, or high inertia motor. Depending on the application, a standard or high dynamic cable is used. Due to its compact design, the Sinamics S200 servo drive system also saves up to 30 percent space in the control cabinet and enables an optimal device arrangement.

In combination with a Simatic controller (e.g., Simatic S7-1500), users get a powerful, future-proof, and robust motion control system that is also easy to operate thanks to

TIA Portal integration, integrated web server (LAN/WLAN), and one-button tuning function.

With Sinamics S200, Siemens is launching a new servo drive system designed for a variety of standard applications in the battery, electronics as well as other industries.

**Siemens Digital Industries (DI)** is an innovation leader in automation and digitalization. Closely collaborating with partners and customers, DI drives the digital transformation in the process and discrete industries. With its Digital Enterprise portfolio, DI provides companies of all sizes with an end-to-end set of products, solutions, and services to integrate and digitalize the entire value chain. Optimized for the specific needs of each industry, DI's unique portfolio supports customers to achieve greater productivity and flexibility. DI is constantly adding innovations to its portfolio to integrate cutting-edge future technologies. Siemens Digital Industries has its global headquarters in Nuremberg, Germany, and has around 72,000 employees internationally.

Die **Siemens AG** (Berlin and Munich) is a technology company focused on industry, infrastructure, transport, and healthcare. From more resource-efficient factories, resilient supply chains, and smarter buildings and grids, to cleaner and more comfortable transportation as well as advanced healthcare, the company creates technology with purpose adding real value for customers. By combining the real and the digital worlds, Siemens empowers its customers to transform their industries and markets, helping them to transform the everyday for billions of people. Siemens also owns a majority stake in the publicly listed company Siemens Healthineers, a globally leading medical technology provider shaping the future of healthcare. In addition, Siemens holds a minority stake in Siemens Energy, a global leader in the transmission and generation of electrical power.

In fiscal 2022, which ended on September 30, 2022, the Siemens Group generated revenue of €72.0 billion and net income of €4.4 billion. As of September 30, 2022, the company had around 311,000 employees worldwide. Further information is available on the Internet at [www.siemens.com](http://www.siemens.com).
