

# Addressing HAIs

## Scenario HAIs

720,000 estimated hospital associated infections each year and represent significant patient safety risks

## Significance Prevention

HAIs cost healthcare organizations billions of dollars annually and disinfection solutions are typically very expensive in terms of cost and labor

## Partner Violet Defense

Utilizes germicidal, clinical UV light spectrum including violet blue light may destroy certain bacteria, mold, fungi and viruses that exist on surfaces without harmful chemicals

## Integration S.A.G.E. + Desigo CC

S.A.G.E. and room occupancy sensors combine with Desigo CC for scheduling and monitoring of UV disinfection cycles when rooms are unoccupied

## Benefits Automated Disinfection

Facilities engineers easily establish cleaning schedules through the BMS for certain times and durations based on the room's prior use
