EHS@MO CS - Principles

Our fundamental principle is ZERO tolerance

An awareness of the importance of "Environment, Health & Safety" (EHS) for people and the environment forms the basis for our planning and action in all our activities at Mobility Customer Services.

Equipped with this mindset, we genuinely practice Siemens' clear commitment to the importance of EHS, and also put it to the test in our business relationships with our customers. **ZERO tolerance!**

The more intensively and consistently managers and employees collaborate with each other in the context of EHS, the more impressive and successful our results will be in the areas of occupational safety, environmental protection and health management.

We also follow the safety principles of Zero Harm Culture@Siemens:

1. "Zero accidents" – it's possible!
2. No compromise when it comes to health and safety!
3. We look out for each other!

"Zero accidents for people and zero harm to the environment"

Objectives of the EHS program:

- ü To provide safe, healthy working conditions at the highest level while minimizing negative environmental impact.
- ü To reduce industrial accidents and occupational illnesses by raising awareness among managers and employees.
- ü To establish systematic collaboration and communication with our customers, partners and suppliers in order to optimize EHS programs and standards.
- ü To protect the environment by avoiding materials with the potential to expose employees and the environment to toxic, flammable substances or give rise to potentially hazardous situations and working conditions.
