Smart building suite drives employee productivity and workplace efficiency

- **Designed to improve employee productivity through personalization and better employee experience**
- **Optimizes space and asset utilization, environmental management, and safety**
- **Enables reduction in energy usage**
- **Based on digitalization and interactive tools**

Office buildings have traditionally been passive, with little or no connectivity. That means they are inherently inflexible and unable to adapt. Changing business models and user expectations are driving the need for agile and flexible environments. By 2030, the future work force will be demanding a more productive and flexible work environment that enables activity-based working. Smart offices are the key to meeting these requirements. Through sensors and data analysis, the smart office responds intelligently – it effectively learns from the people working within it, picking up on behavioral patterns and personalizing the environment through immediate actions based on real-time analytics.

Siemens Smart Infrastructure has launched the ‘smart building suite’ in India that will adapt to user needs, improve employee performance and enable ways to use office space more efficiently and economically. The suite is designed to improve employee productivity through personalization and better employee experience. It is based on digitalization and interactive tools.

The suite includes technologies from Silicon Valley firms Comfy and Enlighted, both acquired by Siemens. Comfy is a workplace experience platform, whilst Enlighted is an IoT platform for smart buildings consisting of multi-function sensors, distributed computing and its own network and software applications. These platforms enable the user to design optimized spaces with enhanced features like, asset utilization, environmental management and safety.

Siemens Ltd.

Birla Aurora, Level 21, Plot No. 1080, Dr. Annie Besant Road,
Worli, Mumbai – 400030, India
Tel. : (022) 3967 7000, 3967 7537
Head, Corporate Communications: Ramya Rajagopalan
Corporate Identity Number: L28920MH1957PLC010839
Reference number: CC/PR/06/SI 03 2020

These platforms complement and integrate with existing technologies in the Siemens Smart Infrastructure portfolio, forming a comprehensive offering for smart offices in new and existing buildings. The offering includes Desigo CC, an open building management platform; Desigo Room Automation, a range of building automation systems which integrate HVAC, lighting and shading systems; fire safety and security products and systems; and advisory and performance services. This paves the way for a user-friendly infrastructure interface.

“Driving employee productivity and workspace efficiency are key aspects of the future workplace. The smart building suite is aimed at increasing agility, collaboration, connectivity and sustainability. In addition, the solution addresses ergonomic, environmental, and technology needs across all generations,” said Robert Demann, Head of Siemens Smart Infrastructure in India.

Siemens Limited focuses on the areas of power generation and distribution, intelligent infrastructure for buildings and distributed energy systems, and automation and digitalization in the process and manufacturing industries. It is also a leading supplier of smart mobility solutions for rail and road transport and infrastructure solutions for Smart Cities. Siemens Limited, in which Siemens AG holds 75% of the capital, is the flagship listed company of Siemens AG in India. As of September 30, 2019, Siemens Limited had Revenue of INR 13,323 crore and 9,437 employees. Further information is available on the Internet at www.siemens.co.in.

Forward-looking statements: “This document contains forward-looking statements based on beliefs of Siemens' management. The words 'anticipate', 'believe', 'estimate', 'forecast', 'expect', 'intend', 'plan', 'should', and 'project' are used to identify forward looking statements. Such statements reflect the company's current views with respect to the future events and are subject to risks and uncertainties. Many factors could cause the actual result to be materially different, including, amongst others, changes in the general economic and business conditions, changes in currency exchange rates and interest rates, introduction of competing products, lack of acceptance of new products or services, and changes in business strategy. Actual results may vary materially from those projected here. Siemens does not intend to assume any obligation to update these forward-looking statements.”
