Initial familiarization WLAN

How Wireless Consulting Works
Just 60 seconds and a click away:
the way we work is explained in the video.

Because a beginning that **WORKS** is the best basis

The initial familiarization is the first phase of our work. In a personal meeting, we coordinate and document the requirements for the planned WLAN infrastructure. This gives everyone involved a good overview of the project, which also helps to plan and budget all further work steps. The requirements defined in this phase serve as the basis for the implementation and acceptance of the infrastructure and for checking the performance characteristics.

The result: You will receive a description of work in which all the basic requirements are laid down and which you can use as a basis for your own project.

We put your WLAN infrastructure on a solid foundation

The initial WLAN familiarization by Wireless Consulting consists of a logical sequence of proven steps. It includes the phases of **preparation, consideration** and post-processing.

- | | |
|---|------------------|
| 1. Kickoff meeting on site or remote | ✓
✓ |
| -Noting the requirements
-Keeping records | |
| 2. Takeover of the planning status | ✓ |
| 3. Preparation of the mandate incl: | ✓
✓
✓
✓ |
| - Coordination of the project team
- Creation of communication matrix
- Creation of task list
- Creation schedule
- Clarification of the country-specific parameters for the technical infrastructure | |
| 4. Project setup incl: | ✓
✓ |
| - Document filing
- Access to the project management platform | |
| 5. Preparation of the service description | ✓ |

Good service & fair prices - a connection that **WORKS**

Services and travel expenses of this project phase are invoiced at a flat rate.
The costs for the familiarization are estimated by us in advance and usually offered/billed at a flat rate.

Fault analysis – WLAN certification – **Familiarization** – Simulation – Wireless planning
Training – QoS Measurement – Commissioning – Configuration – Conception
