SIEMENS
Ingenuity for life

Purchase-to-Pay Process Mining

The challenge

- Complexity as key challenge in your value chain
- Emerging of big data and digital technology as a challenge for procurement and accounting organization

Our approach

- Use of data analytics tool to derive main insights and foster process performance indicators within purchasing and accounting organization
- Gain transparency on process efficiency, maturity and data strategy/availability
- Detect inconsistencies in processes and systems

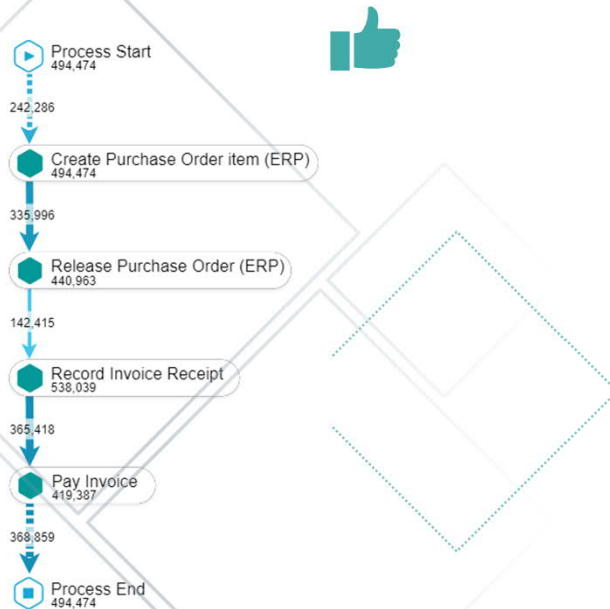

Our impact

- Assign improvement potentials and measure impact due to full transparency
- Identification of automation opportunities within your value chain/support RPA deployments
- Drive digital transformation with process mining

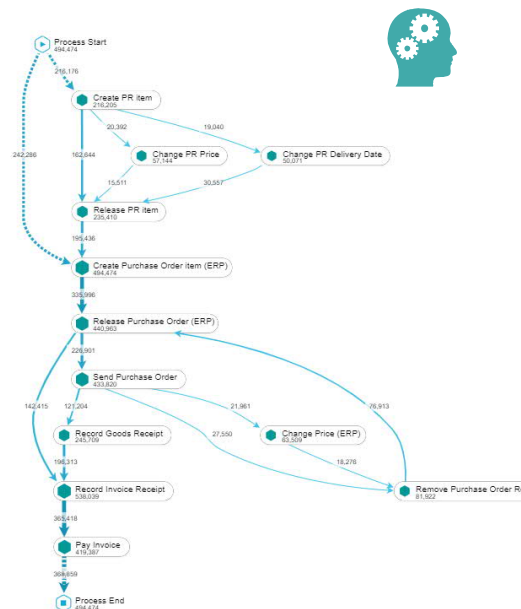

Process visualization is the starting point

Transparency from "Happy Path" to operational reality and challenges
