QUALCOMM SMART CAMPUS – SAN DIEGO

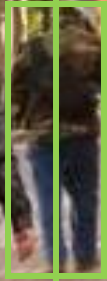

Eran Ben-Shmuel
Former Forbes Councils Member & Juganu CEO

After spending millions of dollars upgrading locker rooms and building lazy rivers, universities need to take a modern, tech-focused approach to campus safety and security that utilizes a campus-wide system of safeguards that can provide on-time and appropriate levels of monitoring and alerts. Private companies and startups should also realize that a campus is an architectural and civil design that can support the economic growth of society — and therefore is a perfect "smart city" testbed.

As noted in this recent Forbes Advisor article, in 2019, nearly 35,000 on-campus crimes were reported in the U.S.
