

Digitalization opens up new potential!

Machine builder: 30 percent less engineering time

Machine user:
Down to
lot size one

Integration trend of robots in machine building (VDMA)

Robot and handling integration into control technology

Why at the automatica?

Optimize the production with the Digital Enterprise

Simulation of machines and lines before real commissioning

Manufacturing companies today have to face central challenges

Speed

Flexibility

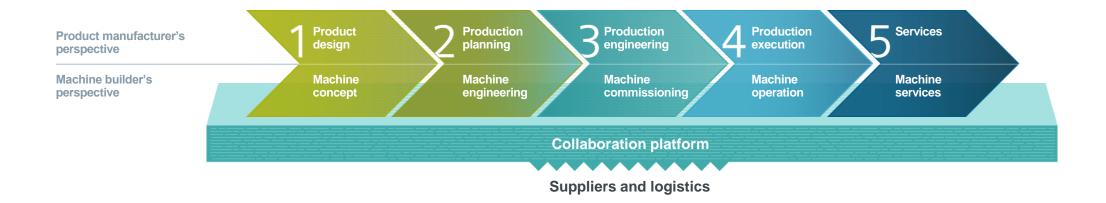

New business models

Siemens holistic approach to integrating, and digitalizing the value chain

For manufacturer and machine builder

It doesn't matter where you start

Brownfield or greenfield

Generate a powerful Digital Twin of the entire value chain

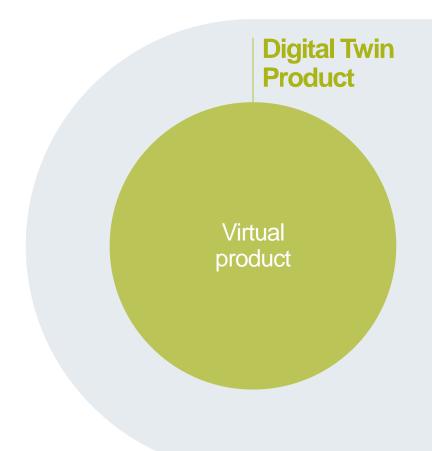

Predict product and production performance

Reduce the number of physical prototypes

Ensure you've met customer requirements

How?

Design, simulate and verify products digitally, including mechanics and multi-physics, electronics and management of software

Digital Twin of the ProductIntegrated CAD/CAE/CAM solution

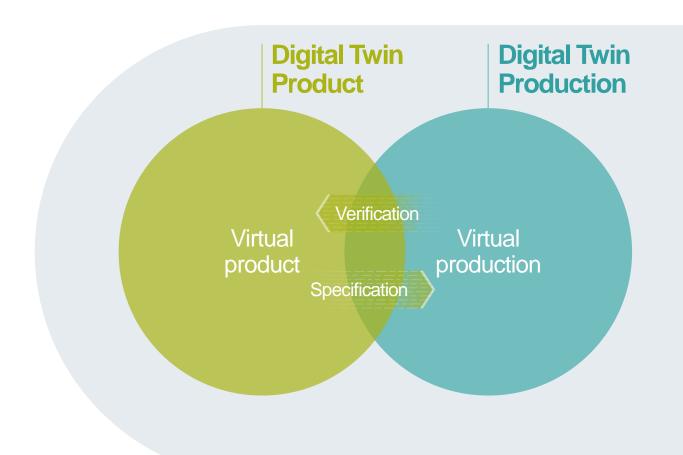

Perfect your product in the virtual world

Design, simulate and validate your product in a virtual environment

Plan, simulate, predict and optimize production digitally with PLC code generation and virtual commissioning.

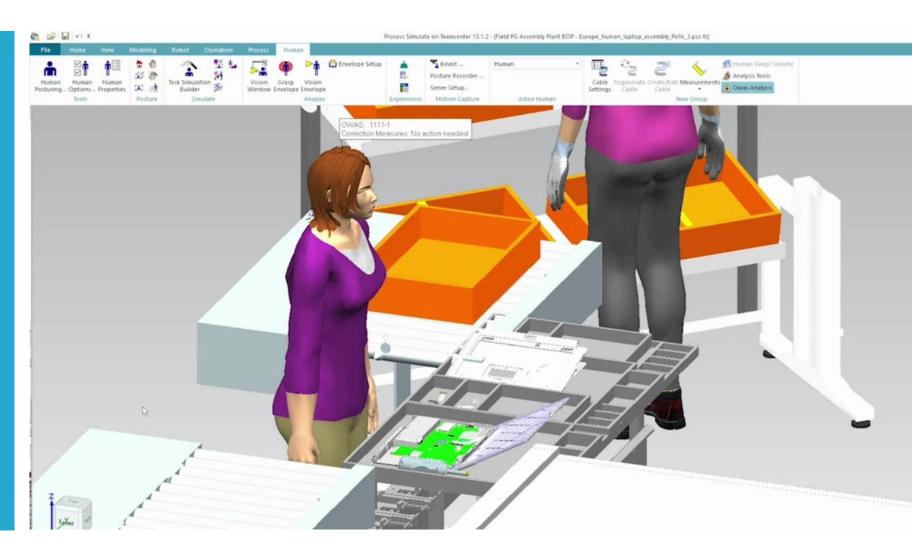

Assembly Planning

Simulate working conditions for humans

Tecnomatix Process Simulate

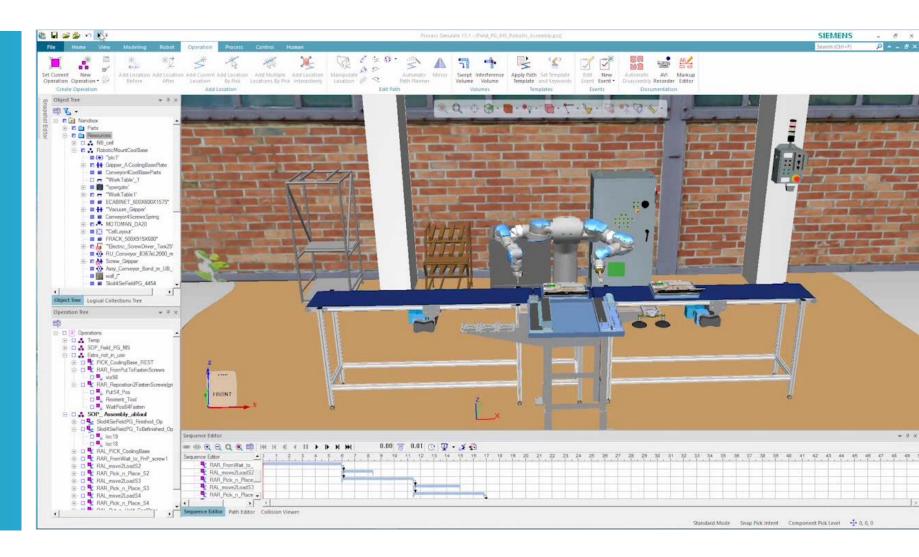

Assembly Planning

Simulate work processes for robots

Tecnomatix Process Simulate

Innovation

Merging the virtual with the real world

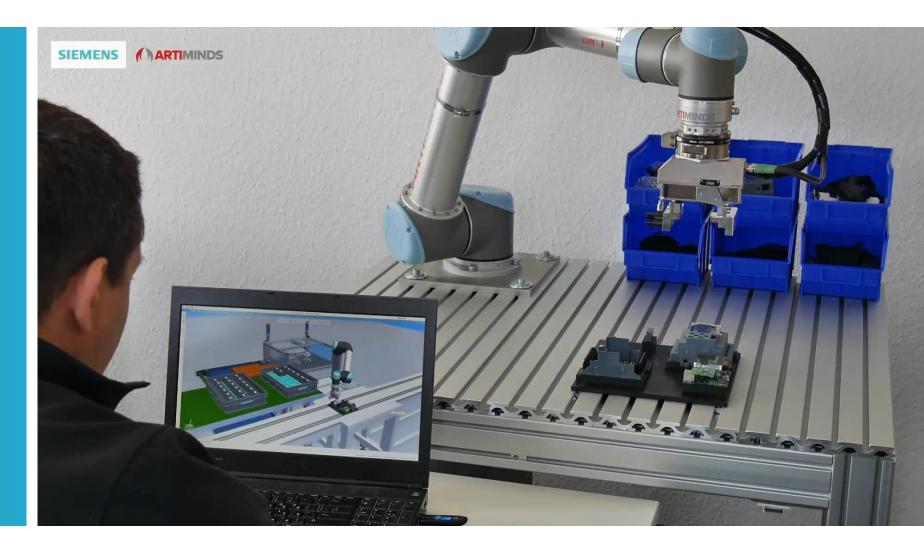

Smart Assembly Robotics

Force sensing/ vision robotics

Task-based programming

Smooth transition from manual to robotic

End to end solution

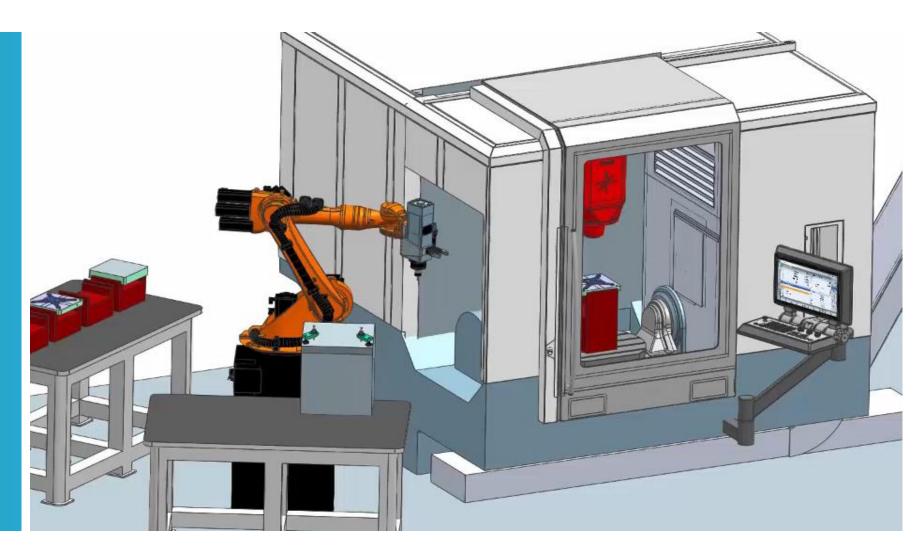

Part Manufacturing Planning

Robot and handling integration into control technology

NX CAD/CAM/CMM
TC Manufacturing

Digital Twin Production

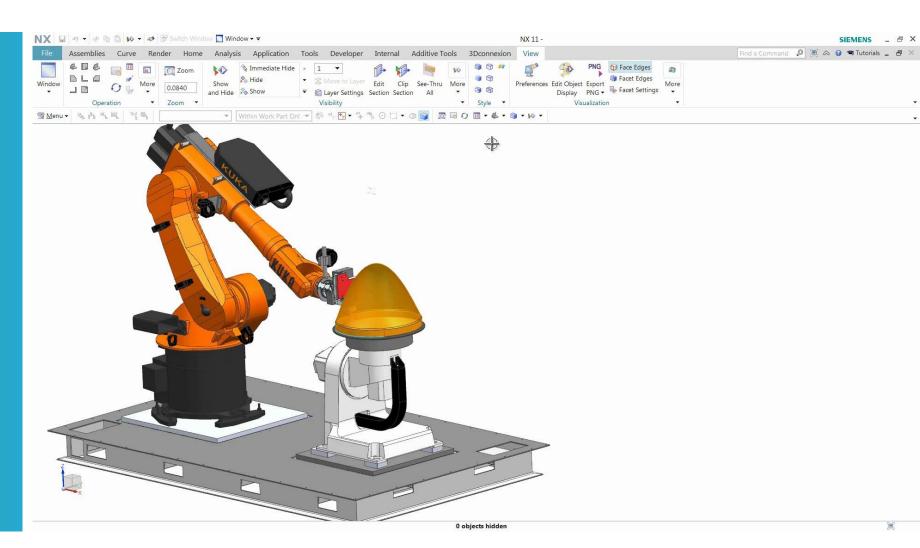

Siemens and Stratasys collaboration

Simulate revolutionary designs with Additive Manufacturing

NX CAM Robotics and Multi-axis deposition

Factory Simulation

SIEMENS
Ingenuity for life

Simulate and optimize your production processes

Tecnomatix Plant Simulation

Digital Twin of the Performance

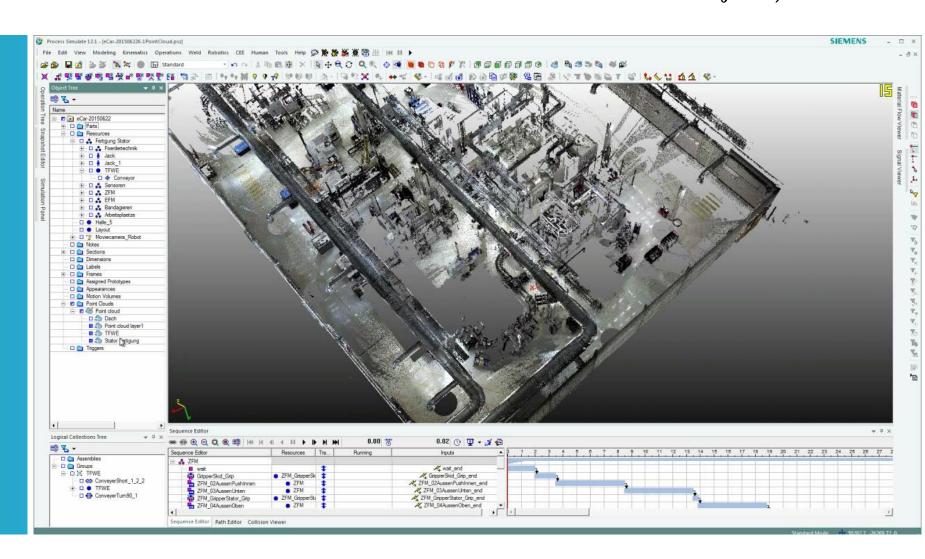

Factory Simulation

SIEMENS
Ingenuity for life

Simulate and optimize your production processes

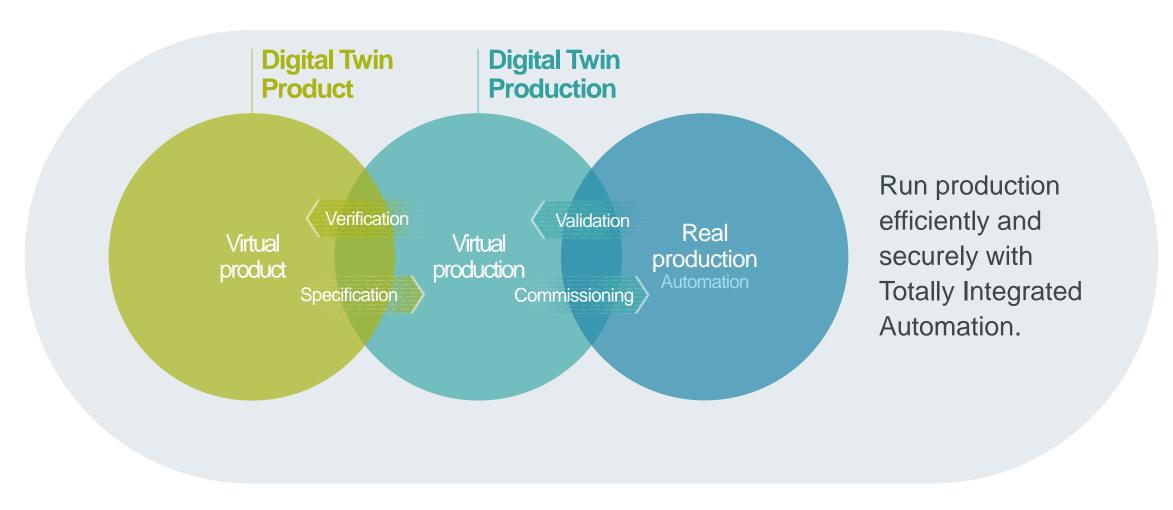

Tecnomatix Plant Simulation

The most holistic Digital Twin

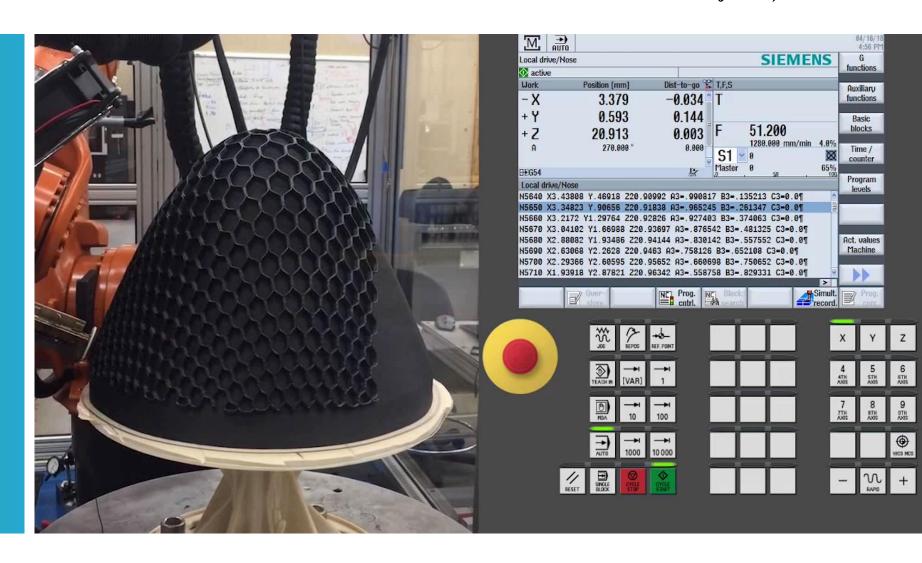

Digital Twin Real production

SIEMENS Ingenuity for life

Realize revolutionary designs with Additive Manufacturing

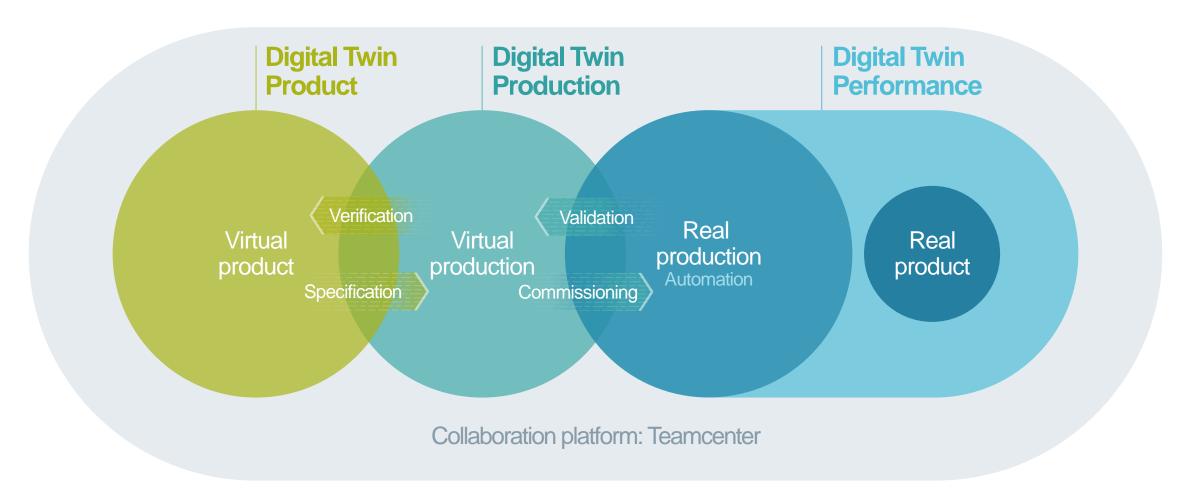

Robot control with SINUMERIK and SIMATIC

Digital Twin Performance

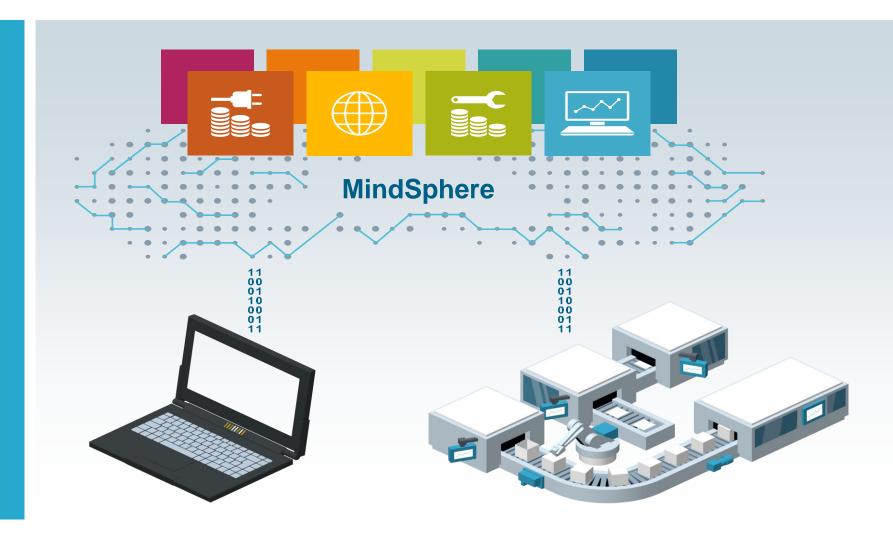

Digital Twin Performance

Analyze and evaluate product and production performance

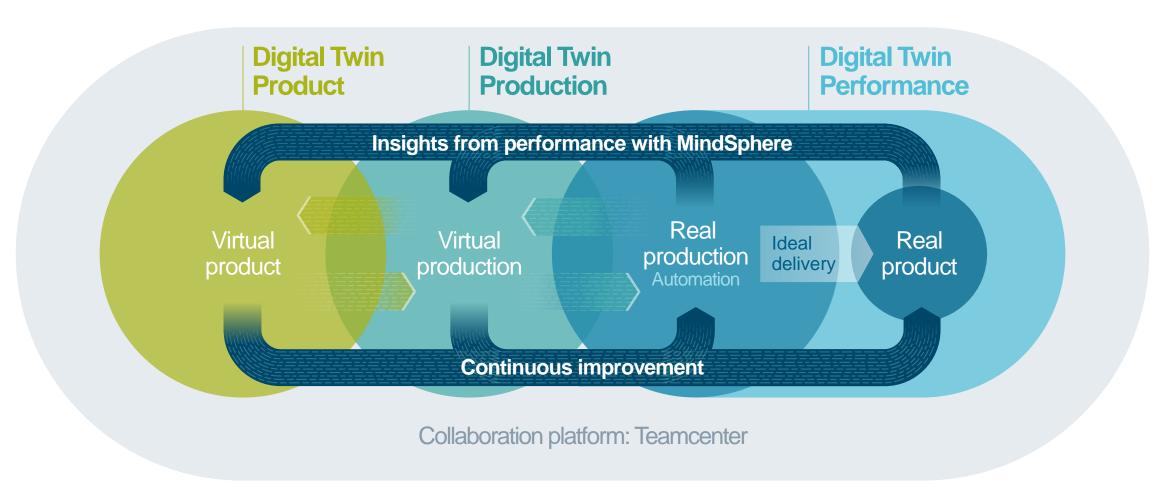

MindSphere – the cloud-based, open IoT operating system

Continuously improve product and production in the real world

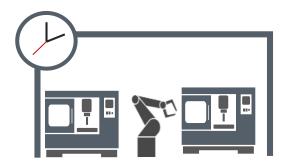

Robot integration

Use of robots – Manufacturing companies facing significant challenges

More automation

Robots are increasingly replacing simple repetitive manual tasks

More flexibility

A robot's six degrees of freedom make it flexible for different applications

New machine concepts

The tight integration of the robot in or next to the machine allows the development of innovative machine concepts

Siemens offers multiple solutions from entry level to a complete robot integration

Usability

Scalable Siemens portfolio – Integration of robots into machine automation

Program integration

- Commands via Siemens controller
- Complete programming of Siemens engineering tool
- · Single point of operation: Siemens HMI

Complete integration

- Single controller concept for automation
- Complete integration of kinematics
- Path control
- Digital twin available

Signal coupling

- Separate controller, separate engineering tool
- Communication via I/O interface
- Separate HMI device

Integration into Siemens portfolio

Scalable Siemens portfolio for machine tool applications – Robot integration with SINUMERIK Run MyRobot

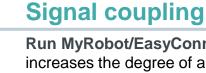

Program integration

Run MyRobot/Handling and /Machining enables flexibility in production without requiring comprehensive robot expertise

Complete integration

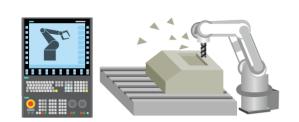

Run MyRobot/DirectControl for new machine concepts and manufacturing processes

Run MyRobot/EasyConnect increases the degree of automation by reducing manual tasks

Complexity of integration

Machining and handling of motors

Practical application in the Siemens electric motor production

Flexibility in the manufacture of low-voltage motors through the use of soft- and hardware from Siemens

- Manufacturing planning and simulation of the assembly line and the robot cell with NX and Plant Simulation
- Handling and machining tasks (drilling and friction process) with SINUMERIK Run MyRobot

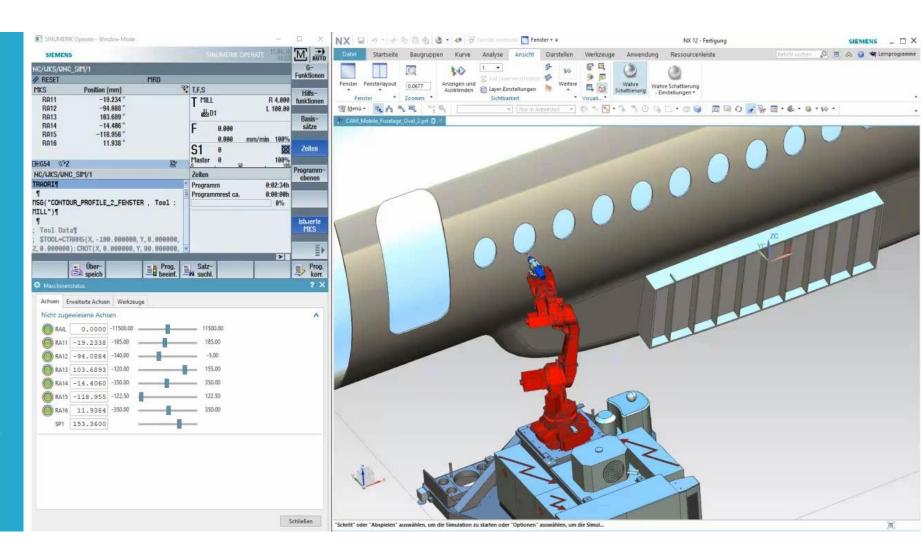

Highly flexible robotic application in the Aerospace industry

Mobile machining of aircraft components with utmost precision

- Shorter development and production times by full integration of the CNC into the simulation (VNCK)
- Flexible, fully automated manufacturing concepts with highest level of quality and accuracy
- Thanks to the complete TIA portfolio with SIMATIC, SINUMERIK, SINAMICS, SIMOTICS

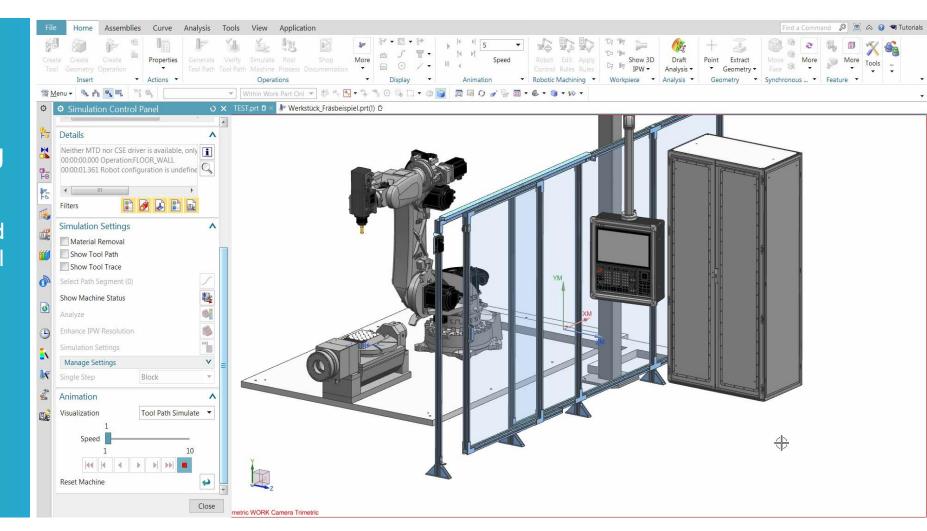

High-precision CNC robotics in additive and cutting application Ultimate flexibility through material extrusion combined with milling

Exploring upcoming manufacturing technologies like additive manufacturing with robotics

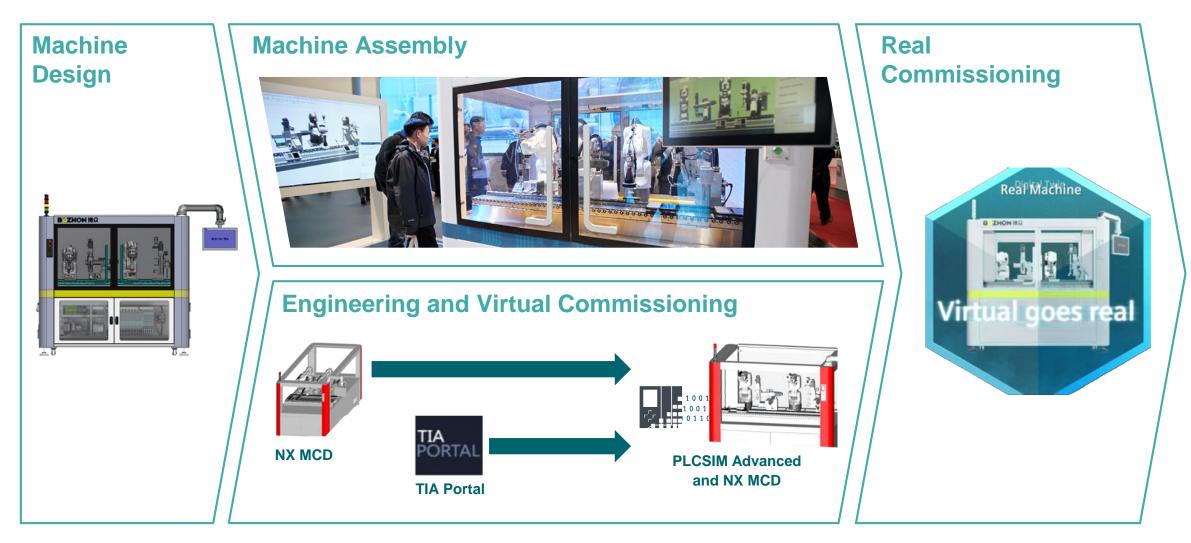

- Connecting the virtual and real worlds with the Digital Twins
- SINUMERIK CNC controlled Comau robot with printing and milling head shows hybrid application

Virtual Commissioning

Highlight Showcase – Digital twins shorten time-to-market

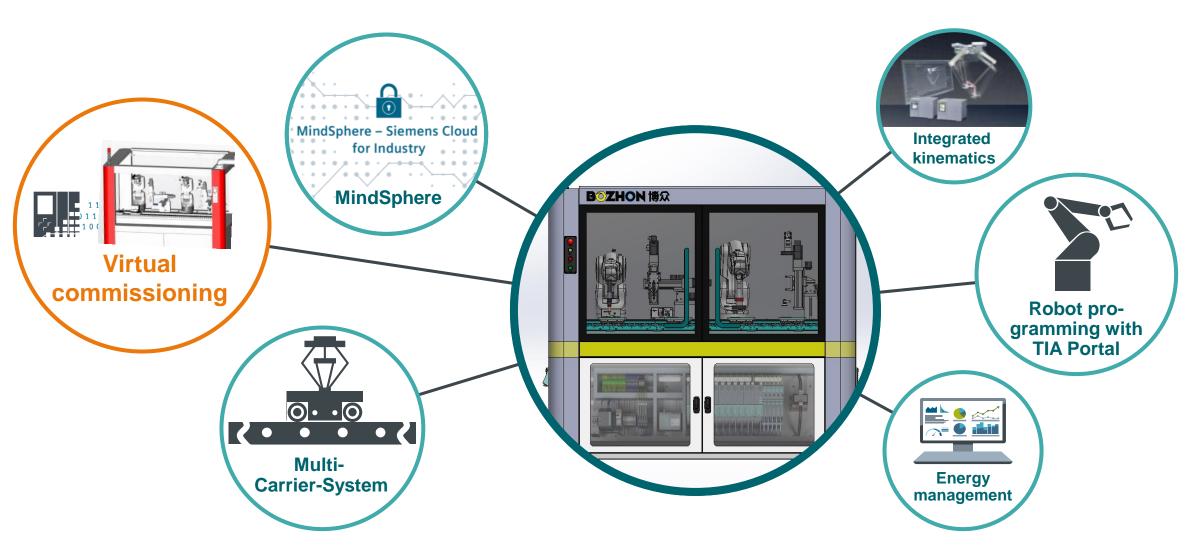

automatica 2018 – Electronics Assembly Machine – Highlights

Ingenuity for life

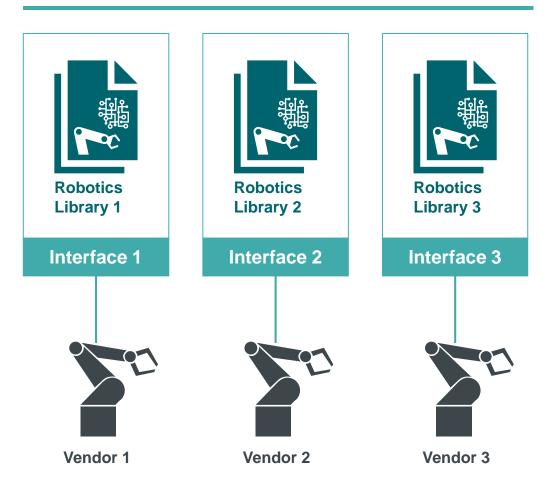

TIA Portal Robotics Library (PLCopen compliant) – Unified robot interface with flexible robot selection

The member companies of MindSphere | World support the worldwide application and positioning of MindSphere

Shared activities of the organization

- Recommendations for requirements imposed on IoT operating system MindSphere
- International rollout of activities (next step Italy, ...)
- Expansion of member companies and user groups (16 further requests approved)
- Support in opening up new digital markets for new databased business models

Digital Enterprise – Implement now!
