

# Solar photovoltaic skids

Siemens delivers fully functioning plug-in-play photovoltaic power stations. These integrated stations are built per the unique specifications requested by the customers and are designed to last. Skid assembly takes place in a factory environment, which allows for expedited on site commissioning and minimization of required on-site coordination between contractors, leading to lower labor costs. String inverter skid options make it possible for inverters to be swapped by local electricians instantaneously, resulting in higher uptime and greater power production.
