# Preface

## Purpose of This Manual

The manual is divided into the following topics:

- Notes to SIPROTEC objects
- DNP V3.0 Device Profile
- Point lists

General information about design, configuration, and operation of SIPROTEC devices are laid down in the SIPROTEC 4 system manual, order no. E50417-H1176-C151.

## Target Audience

Protection engineers, commissioning engineers, persons who are involved in setting, testing and service of protection, automation, and control devices, as well as operation personnel in electrical plants and power stations.

## Additional literature

This manual describes the DNP 3.0 Device Profile of the SIPROTEC devices.

The following additional manuals inform you about the DNP point lists and the function, operation, assembly and commissioning of the SIPROTEC devices:

Manual	Contents	Order number

### Applicability of this Manual

This manual is valid for

- SIPROTEC devices 7SD80 with
  - firmware version 4.6 and
  - DNP communication module version 02.00.01 or higher.

For device parameterization **DIGSI 4 version 4.xx or higher** and DNP standard mappings 3-1 to 3-n (n = device type dependent number of standard mappings) have to be used.

### Additional Support

Should further information on the System SIPROTEC 4 be desired or should particular problems arise which are not covered sufficiently for the purchaser's purpose, the matter should be referred to the local Siemens representative.

## Instructions and Warnings

The warnings and notes contained in this manual serve for your own safety and for an appropriate lifetime of the device. Please observe them!

The following terms are used:

### **DANGER**

indicates that death, severe personal injury or substantial property damage will result if proper precautions are not taken.

### **Warning**

indicates that death, severe personal injury or substantial property damage can result if proper precautions are not taken.

### **Caution**

indicates that minor personal injury or property damage can result if proper precautions are not taken. This particularly applies to damage on or in the device itself and consequential damage thereof.

### *Note*

indicates information about the device or respective part of the instruction manual which is essential to highlight.

## **Warning!**

Hazardous voltages are present in this electrical equipment during operation. Non-observance of the safety rules can result in severe personal injury or property damage.

Only qualified personnel shall work on and around this equipment after becoming thoroughly familiar with all warnings and safety notices of this manual as well as with the applicable safety regulations.

The successful and safe operation of this device is dependent on proper handling, installation, operation, and maintenance by qualified personnel under observance of all warnings and hints contained in this manual.

In particular the general erection and safety regulations (e.g. IEC, DIN, VDE, EN or other national and international standards) regarding the correct use of hoisting gear must be observed. Non-observance can result in death, personal injury or substantial property damage.

---

### *QUALIFIED PERSONNEL*

For the purpose of this instruction manual and product labels, a qualified person is one who is familiar with the installation, construction and operation of the equipment and the hazards involved. In addition, he has the following qualifications:

- Is trained and authorized to energize, de-energize, clear, ground and tag circuits and equipment in accordance with established safety practices.
- Is trained in the proper care and use of protective equipment in accordance with established safety practices.
- Is trained in rendering first aid.

## Typographic and Symbol Conventions

The following text formats are used when literal information from the device or to the device appear in the text flow:

**Parameter names**, i.e. designators of configuration or function parameters which may appear word-for-word in the display of the device or on the screen of a personal computer (with operation software DIGSI 4), are marked in bold letters of a monospace type style.

*Parameter options*, i.e. possible settings of text parameters, which may appear word-for-word in the display of the device or on the screen of a personal computer (with operation software DIGSI 4), are written in italic style, additionally.

“Annunciations”, i.e. designators for information, which may be output by the relay or required from other devices or from the switch gear, are marked in a monospace type style in quotation marks.

Deviations may be permitted in drawings when the type of designator can be obviously derived from the illustration.

# 1 Notes to SIPROTEC objects

This chapter contains notes for the use and evaluation of certain SIPROTEC objects which are available via DNP3.0 communication.

The description of the standard mappings / point lists (refer to chapter 3) contains the pre-allocation of the mapping files at delivery or first assignment of a mapping in DIGSI 4 to the SIPROTEC device.

Changes of the allocation and the scaling of the measured values are possible in adaptation to the concrete installation environment.

1.1	Binary Inputs / Annunciations	10
1.2	Binary Outputs / Commands	11
1.3	Analog Inputs / Measured values	12
1.4	Metered measurands	13

## 1.1 Binary Inputs / Annunciations

### Note

Depending on the device composition and the existing protection packages not all of the indicated binary inputs or protection annunciations (and corresponding DNP points) may be available in the SIPROTEC device

### 1.1.1 Error with a summary alarm

The "Error with a summary alarm" is ON if at least one of the following internal alarms assumes the value ON:

- "Error 5V", "Error neutral CT", "Error 1A/5A wrong", "Error A/D converter".

Refer to chapter 3.1.8

### 1.1.2 Alarm Summary Event

The "Alarm summary event" is indicated, if at least one of the following internal alarms assumes the ON status:

- "Error Board 1", "Error Board 2", "Error Board 3", "Error Board 4", "Error Board 5", "Error Board 0"
- "Failure Battery empty", "Alarm Real Time Clock",
- "Failure Phase Sequence", "VT Fuse Failure", "Failure Voltage Balance", "Failure General Voltage Supervision",
- "Failure Current Balance", "Failure Current Summation", "Failure General Current Supervision".

Refer to chapter 3.1.8

### 1.1.3 Stop Data Transmission

The functionality "Stop data transmission" is not supported via DNP communication. If "Stop data transmission" is active nevertheless data via DNP will be transmitted furthermore.

The annunciation "DataStop" signals the activation of "Stop data transmission" however and can be evaluated correspondingly in the DNP master.

Refer to chapter 3.1.9

## 1.2 Binary Outputs / Commands

### Note

The allocation of the output relays to the switching devices and to the output channels is defined during parametrization of the SIPROTEC devices.

Depending on the device composition there may be less than indicated output relays (and corresponding DNP message points) available in the SIPROTEC device.

### 1.2.1 Single Commands

The command output mode (*pulse output*, *continuous output*) is changeable for the single commands using parametrization software DIGSI 4.

The switching direction OFF for single commands with *pulse output* is not permitted and is rejected in the SIPROTEC device.

Refer to chapter 3.2.2

### 1.2.2 Control mode REMOTE

Control mode with control authority is REMOTE, option of unlocked control with DNP.

- Changing the Control mode REMOTE“ to UNLOCKED permits one unlocked control operation via DNP. After execution of the command, the “Control mode REMOTE“ in the SIPROTEC device will automatically be reset to LOCKED.
- A programmed test “Switch in position“ for unlocked control operations will always be executed.

If, after changing the “Control mode REMOTE“ to UNLOCKED, no command is received via DNP for a period of 5 minutes, then the “Control mode REMOTE“ is automatically reset to LOCKED.

Refer to chapter 3.2.1

### 1.2.3 Changing the setting group

Switching on one setting group automatically switches off the current active setting group. Transmission of the value OFF is insignificant for the change of the setting group and is refused by the device.

A change of the setting group is only possible via DNP if the parameter **CHANGE TO ANOTHER SETTING GROUP** (parameter address = 302) has the value "Protocol".

Refer to chapter 3.2.1

## 1.3 Analog Inputs / Measured values

### Note

Depending on the device composition not all of the indicated analog inputs (and corresponding DNP message points) may be available in the SIPROTEC device.

The given scaling values for the measured values in the standard mapping apply to installations with the following nominal operating values:

Measurement: Full Scale Voltage (parameter address 1103):

– >100 ... 1000 kV

Measurement: Full Scale Current (parameter address 1104):

– >10 ... 1000 A

Product of:

- Transformers – Rated Primary Voltage (parameter address 0203)
- >100 ... 1000 kV

Product of:

- Transformers– CT Rated primary current (parameter address 0205) and
- Ratio factor I4/Iph (parameter address 0221)
- >10 ... 1000 A

Power values:

- Product of Full Scale Voltage and Full Scale Current multiplied by  $\sqrt{3}$
- >100 ... 1000 MW (MVAR)

### Note

Changes of the scaling of the measured values are possible in adaptation to the concrete installation environment (refer to manual “DNP 3.0 Communication Database”).

## 1.4 Metered measurands

### Scaling

The scaling of the metered measurands, which are derived from measured values, refers to:

**60000 impulses per hour for  $V = V_{\text{prim}}$  and  $I = I_{\text{prim}}$**

$V_{\text{prim}}$  = **Full Scale Voltage**  
(parameter address = 1103)

$I_{\text{prim}}$  = **FULL SCALE CURRENT**  
parameter address = 1104)

### Example

In the parameter set is configured:

$I_{\text{prim}} = 1000 \text{ A}$  and  $V_{\text{prim}} = 400.0 \text{ kV}$ ,

60000 impulses correspond so that:

$$1 \text{ h} * 1000 \text{ A} * 400 \text{ kV} * \sqrt{3} = 692.82 \text{ MWh}$$

### Note

- The type of the update (cyclic, with or without deletion) and the update interval must be programmed for the metered measurands with the parametrization software DIGSI 4.
- The scaling of the metered measurands at binary inputs ("Wp(puls)" and "Wq(puls)") depends on the externally connected pulse generator.

# DNP V3.0 Device Profile

2.1	Implementation Table	2-16
2.2	Device Profile Document	2-18

## 2.1 Implementation Table

The following table gives a list of all objects recognized and returned by the SIPROTEC device.

For static objects, requests sent with qualifiers 00, 01, 06, 07 or 08 will be responded with qualifiers 00 or 01.

Requests sent with qualifiers 17 or 28 will be responded with qualifiers 17 or 28.

For change-event objects, qualifiers 17 or 28 are always responded.

In the table below text colored as 00, 01 (start stop) indicates Subset Level 3 functionality (beyond Subset Level 2), text colored as 07, 08 (limited qty) indicates functionality beyond Subset Level 3.

## 3.1 Binary Input Points

<b>Binary Input Points</b>			
Static (Steady-State) Object Number: 1			
Change Event Object Number: 2			
Request Function Codes supported: 1 (read)			
Static Variation reported when variation 0 requested: 1 (Binary Input with status)			
Change Event Variation reported when variation 0 requested: 2 (Binary Input Change with Time)			
Point Index	Name	Description	Class
<b>3.1.1 Interface</b>			
29	PI FO Data failure	Prot. Interface 1: Total receipt. failure ; ON=1, OFF=0	3
31	PI Cu Data failure	Prot. Interface 1: Total receipt. failure ; ON=1, OFF=0	3
<b>3.1.2 Automatic recloser</b>			
34	79 ON	79 Auto recloser is switched ON; ON=1, OFF=0	2
35	79 is blocked	79: Auto recloser is blocked; ON=1, OFF=0	2
36	79 not ready	79: Auto recloser is not ready; ON=1, OFF=0	2
37	CB not ready	79: Circuit breaker 1 not ready; ON=1, OFF=0	2
38	79 T-CBreadyExp	79: CB ready monitoring window expired; ON=1, OFF=0	3
39	79 in progress	79 - in progress; ON=1, OFF=0	2
40	79 T-Start Exp	79: Start-signal monitoring time expired; ON=1, OFF=0	3
41	79 TdeadMax Exp	79: Maximum dead time expired; ON=1, OFF=0	3
42	79 Evolving Flt	79: Evolving fault recognition; ON=1, OFF=0	3
44	79 Td. evol.Flt	79 dead time after evolving fault; ON=1, OFF=0	3
46	79 Tdead 3pTrip	79 dead time after 3pole trip running; ON=1, OFF=0	3
50	79 1stCyc. run.	79 1st cycle running; ON=1, OFF=0	3
51	79 2ndCyc. run.	79 2nd cycle running; ON=1, OFF=0	3
55	79 Close	79 Close command; ON=1, OFF=0	3
57	79 Close1.Cyc3p	79: Close command after 3pole, 1st cycle; ON=1, OFF=0	3
58	79 Close 2.Cyc	79: Close command 2nd cycle; ON=1, OFF=0	3
59	79 T-Recl. run.	79: Reclaim time is running; ON=1, OFF=0	3
60	79 Successful	79 - cycle successful; ON=1, OFF=0	3
63	79 TRIP 3pole	79: TRIP command 3pole; ON=1, OFF=0	2
64	79 1.CycZoneRel	79 1st cycle zone extension release; ON=1, OFF=0	3
65	79 2.CycZoneRel	79 2nd cycle zone extension release; ON=1, OFF=0	3
69	79 Remote Close	79: Remote close signal send; ON=1, OFF=0	3
<b>3.1.3 Direct Transfer Trip</b>			
70	DTT OFF	Direct Transfer Trip is switched OFF; ON=1, OFF=0	3
71	DTT BLOCK	Direct Transfer Trip is BLOCKED; ON=1, OFF=0	3
75	DTT TRIP øABC	DTT TRIP command Phases ABC; ON=1, OFF=0	2
<b>3.1.4 Time Overcurrent protection</b>			
77	5X-B BLOCK	50(N)/51(N) Backup O/C is BLOCKED; ON=1, OFF=0	3
78	5X-B ACTIVE	50(N)/51(N) Backup O/C is ACTIVE; ON=1, OFF=0	3
79	5X-B PICKUP	50(N)/51(N) Backup O/C PICKED UP; ON=1, OFF=0	2
