

SIEMENS MOBILITY SUPPLIER CASE STUDY

Premier Modular

Modular building specialist enables panoramic views of Goole rail village site

One of the UK's leading modular building specialists has provided project offices offering panoramic views of the site where Siemens Mobility is creating a state-of-the-art "rail village".

Premier Modular has installed a two-storey office building featuring a rooftop viewing platform, enabling team members, colleagues and visitors to view progress across the entire site in Goole where Siemens Mobility is developing a state-of-the-art trains factory and associated facilities.

The offices are likely to be in use for at least a year and the company also hopes to provide welfare facilities for staff on site over the coming months.

Mark Addison, Account Director at Premier Modular, based in Brandesburton, East Yorkshire, said: "It's fantastic to be involved in such an important investment that will help to put Goole on the map.

"The Goole project was delivered during lockdown and was a very welcome project for the Premier factory at such an uncertain time.

"Siemens is an ongoing and valued customer for us and we've previously supplied offices and welfare accommodation for two other Siemens sites."

"As a local business, we wanted to have a presence and support Siemens Mobility on this project, so we put our best foot forward to win the work. Siemens has been a great investor in the area with wind turbines and now the rail industry."

Premier Modular provides temporary modular buildings and permanent bespoke offsite solutions to fulfil almost any application, site and design.

The business offers a full range of design, offsite manufacturing, fitting out and construction services to contractors and clients, delivering high quality, affordable and sustainable buildings in the education, commercial, industrial, construction welfare, healthcare, and residential sectors.

It employs approximately 250 staff and has recently launched a major recruitment drive, with vacancies for around 85 new positions.

Premier Modular has also played a major role during the Covid-19 pandemic, including supplying modular buildings for the NHS Nightingale Hospital in Exeter and being awarded a multi-million pound contract to provide 50 Covid-19 test centres around the country.

The company's largest contract to date is a £50 million scheme to provide a range of office and welfare buildings for the £20 billion Hinkley Point C nuclear power station project in Somerset – the first nuclear power station to be built in the UK since 1995.
