Dear Readers,

In 2019, we succeeded once again in writing a new chapter in the success story of Siemens Bank. We can now look back on another very successful fiscal year, a year in which we generated the best operating result in the bank’s history.

The continuous increase in income before income taxes and profitability results from our credit business, which generated a significant amount of growth even though the economy cooled off.

The foundation of this success is our systematic risk management. No excessive credit risks were taken to achieve higher volumes and margins. On top of that, we largely avoided credit hits and kept the quality of our portfolio on a consistently high level.

This is a particularly significant achievement in light of the increasingly challenging market conditions we face. During 2019, the economic slowdown also continued to spread through the core markets of Siemens Bank. This trend was intensified by the protectionist tendencies of the U.S. government and the global trade dispute that has been triggered by them, by the economic uncertainties associated with the unresolved withdrawal of Great Britain from the EU (Brexit) and by geopolitical conflicts. In addition, interest margins remained under extreme pressure as a result of the high level of liquidity in credit markets – a consequence of the intense, ongoing competition in many regional markets for project financing and corporate lending.

Siemens Bank supported Siemens AG, its subsidiaries and affiliated companies by providing financing to a large number of flagship projects. One of these is the Yunlin offshore wind-power project in Taiwan for which Siemens Gamesa Renewable Energy (SGRE) won the contract in May 2018. Taiwan has been planning for years to abandon nuclear power and is focusing in particular on expanding the use of offshore wind power. The Yunlin offshore wind farm will have an output of more than 640 MW and is scheduled to be completed in 2021. Siemens Gamesa is supplying 80 turbines, each of which has an output of 8 MW. The financing of the €2.7 billion project is being provided by a group of Taiwanese and international banks, including Siemens Bank and three export credit agencies.

It is also worth highlighting Siemens Bank’s participation in the Al Taweelah project in Abu Dhabi (UAE), one of the largest seawater desalination plants in the world. This project will entail major participation from the Siemens Group and aims to be completed by 2022, at which point it will cover the water requirements of more than 350,000 households. Due to its size and efficiency, the plant will set new standards in water supply. The project will be implemented by a consortium of local investors led by ACWA Power. The Public Private Partnership (PPP) project will be financed by a group of six lenders. With its long and extensive experience in project finance and PPPs, Siemens Bank acts as Mandated Lead Arranger (MLA) in this project.

Thanks to our positive business performance during the past fiscal year and our proven, long-term strategy that is designed to generate profitable growth, we are now positioned better than ever to support the strategic goals and challenges of Siemens AG, its subsidiaries and affiliated companies and, thus, to meet the financing needs of our customers. For this reason, Siemens Bank is and will remain an important source of stability and a partner in the success of the Siemens Group.

Management report
1 Business performance overview

1.1 Business activities of Siemens Bank GmbH

Siemens Bank GmbH, Munich (hereinafter: Siemens Bank) is part of the Service Company Financial Services in the Siemens Group. Through the business activities of Siemens Bank, Siemens AG, Berlin and Munich (hereinafter: Siemens AG), as the sole shareholder of Siemens Bank, broadened the range of sales-financing products in its Service Company Financial Services, increasing flexibility in group finance and optimizing its risk management.

There continue to be three pillars to the Siemens Bank business model, as was the case in previous fiscal years:

» Lending and guarantee business: This is the core business of Siemens Bank, focusing on the provision of medium- to long-term financing for corporate clients, project companies and public-sector borrowers. The product portfolio currently comprises, in particular, corporate loans, project finance, promissory note loans, and revolving loan facilities. Siemens Bank operates in both the primary market and the secondary market for loans. Guarantees are issued in particular in the context of project financing, but currently play a subordinated role.

» Deposit and treasury business: The deposit business focuses on the receipt and investment of overnight money and time deposits from companies in the Siemens Group and selected third-party institutions. The treasury business encompasses Group financing activities and asset liability management, including the management of a portfolio of highly liquid assets. Asset liability management ensures that the credit business is funded by equity and deposits.

» Fee business: Key resources for managing financial risk and processing financial transactions in the Siemens Group are pooled within Siemens Bank. These resources not only support the company’s own banking operations, they are also offered to Siemens AG, its subsidiaries, and selected third parties.

Siemens Bank does not undertake retail banking or maintain a trading book.

1.2 Economic environment

In its lending business, Siemens Bank offers its products primarily to customers in Europe, Asia and Australia. In view of this strategic focus, economic trends in these regions have a special significance for the business performance of Siemens Bank.

The slowdown in the economic upswing expected in last year’s forecast actually occurred in fiscal 2019. Many risk factors identified last year have materialized and had a negative impact on the economic development of the world economy, but also on the demand for equipment investments.

Nevertheless, economic development was, as expected, heterogeneous in the various relevant markets. According to data published by the OECD, gross domestic product in OECD countries rose by 0.6% in the first quarter and by 0.4% in the second quarter of the 2019 calendar year, in both cases in comparison with the previous quarter (last year: 0.5% and 0.6% respectively). In the U.S.A., economic growth weakened despite support from a strong domestic economy. In Asia, on the other hand, high growth rates continue to be achieved. According to OECD data, GDP in the ASEAN 10 countries grew by 5.2% in 2019 (previous year: 5.3%). Although the global economy grew faster in Asia than in any other region, these rates were well below the very high growth rates of the past. A number of factors of uncertainty had a dampening effect on growth, such as the trade conflict between China and the U.S.A. or political conflicts.

According to information from the German Federal Ministry of Economics and Technology, GDP growth in the eurozone weakened in the 2019 calendar year: GDP compared with the previous quarter grew by only 0.4% in the first quarter and by 0.2% in the second quarter (in the relevant prior-year period: 0.4% in each case). This growth lagged significantly behind developments in other regions of the world, as economic momentum slowed or continued to stagnate, particularly in Germany, France, Spain and Italy. Outside the eurozone, GDP in the United Kingdom fell by 0.2% in the second calendar quarter of 2019, according to information from the OECD, after a slight growth of 0.5% in the first quarter (previous year: growth of 0.1% in the first calendar quarter and 0.4% in the second). This economic development reflected the continuing uncertainty surrounding Britain’s potentially contractualy unregulated withdrawal from the European Union (“hard Brexit”).
According to Siemens Bank’s overall assessment, a clear slowdown in economic development within and outside the eurozone could be observed in fiscal 2019, the extent of which was in line with the previous year’s forecast. Only in Asia did the expected positive development continue. At the same time, Siemens Bank continues to observe intense competition in the market for project and investment financing, as interest rates remain at historically low levels and the lending market is very liquid, particularly in the eurozone. Siemens Bank sees a similar situation regarding market and competition in many Asian markets. The high level of liquidity in the market and the emergence of new competitors beyond the traditional banking segment as investors in project financing and corporate financing in the form of insurance companies, pension funds or alternative investment funds means that companies are taking advantage of favorable capital market conditions to refinance their positions through bonds or to replace existing financing with more favorable lending terms, thereby further increasing the pressure on margins in the lending markets. As a result, the level of early terminations of existing financing remained very high and exceeded last year’s level and Siemens Bank’s expectations.

Although the planning cycles that are relevant for the financing of projects and equipment investments usually have longer terms and are therefore less dependent on economic trends, Siemens Bank continues to observe very high competitive pressure and thus a very challenging market environment. Increased uncertainty about future economic developments also led to greater restraint in investments in plant and equipment. In this environment, it remains difficult to achieve return profiles. Nevertheless, the broadly based geographical positioning at Siemens Bank enabled the Bank to offset weak trends in individual markets or industries by exploiting opportunities in other markets.

1.3 Regulatory developments

Under the Basel III framework, which was drawn up at international level in response to the financial crisis of the last decade, regulatory requirements for banks were redefined and tightened up with the objective of improving the resilience of the overall system in the event of a crisis by higher capital requirements to cover risk and greater liquidity buffers for the banks.

At the European level, the core legal provisions relating to the agreed reforms, the Capital Requirements Regulation (CRR) and the Capital Requirements Directive (CRD IV), came into effect on January 1, 2014. The CRD IV provisions were transposed into German law with the CRD IV Implementa- tion Act (CRD IV-Umsetzungsgesetz), which involved far-reaching changes to national legal provisions in Germany.

The resulting regulatory requirements for Siemens Bank have been implemented in recent years. The following topics were in the foreground in the last fiscal year:

- The change in the requirements for the national million loan reporting as of January 2019.
- The implementation of EBA Guideline 2017/15 as of January 2019. This changed the requirements for determining both the composition of the economic groups of Connected Clients (GCC).
- Adjusted reporting requirements and forms in accordance with EU Regulation 2017/1538 for Financial Reporting (FinRep) as of January 2019.
- Extended obligations under the Own Funds Reporting with regard to “Prudent Valuation” from December 31, 2018 onwards.

The new CRR II and CFD V were adopted by the EU Commission during fiscal 2019, which includes the final implementation of the Basel Committee on Banking Supervision’s requirements for the introduction of binding minimum ratios for the leverage ratio and the net stable funding ratio. In addition, the first contents of Basel IV must be implemented, such as new requirements for determining risk-weighted assets, new large exposures regulations and new disclosure obligations. The implementation of these new or adjusted requirements will be the focus in the next two fiscal years until their introduction in June 2021.

Subsequently, the requirements for the implementation of the Basel IV package with the central elements of the changes in calculation elements for lending, market and operational risks are expected to be specified.

In order to be able to implement the requirements of the reform packages promptly, Siemens Bank will set up corresponding projects in the new fiscal year.

On July 31, 2019, the German federal government adopted a draft law to implement the amending directive to the Fourth EU Anti-Money Laundering Directive. The draft law serves to transpose EU Directive 2018/843 into national law and essentially contains regulations in the areas of obligat- ed parties, high-risk countries, access to the transparency register and linking of the national transparency registers. Siemens Bank is implementing these innovations as part of a project. The new Anti-Money Laundering Act (Geld- waschgesetz) will come into effect on January 1, 2020.

In addition, there were continuous activities in the past fiscal year to analyze the increasing regulatory require- ments placed on the IT of banks and their implications for implementation.

Siemens Bank has formed a project group for the expected transposition of the “Guidance2” from the European Banking Authority (EBA) into national law.

Further developments in European and national legislation were continuously monitored as part of Siemens Bank’s Compliance Program.

The effects of a possible Brexit on Siemens Bank and the regulatory requirements are also closely analyzed by a working group.

In March 2017, Siemens Bank opened a branch office in Singapore. The new branch is required to comply with local regulatory requirements and reporting obligations in the Monetary Authority of Singapore (MAS) reporting system. The local regulatory requirements are based on the Basel III framework and are essentially comparable to the European requirements.

The monitoring and development of changes and adjustments to local regulatory requirements is also part of Siemens Bank’s Compliance Program.

In May 2018, MAS published the final “Notice Revised MAS 610/1003”. The monthly report 1003 serves MAS as a statis- tical basis for the balance sheet evaluation and is extended substantially under the new standard. The Notice is applicable from October 2020 onwards, with a prior six-month mandatory test phase.

1.4 Business performance

2019, like the previous fiscal year, was characterized primarily by two factors: The significant growth in the lend- ing business – particularly in Asia – even though it was lower than last year had a positive impact on profitability before risk provisions and led to a significant increase in net interest income. This positive development dominated the increasingly challenging economic environment as well as the high liquidity in key markets and the associated pres- sure on interest margins and achievable returns. At the same time, the provisions for credit risks remained constant despite the significant growth in business, as the Bank con- tinued to consistently avoid entering into excessive credit risks.

Due to the growth in business volume, the very good devel- opment of EU Expecting result before risk provisions and the constant addition to provisions for credit risks, manage- ment is very satisfied with the business performance in fis- cal 2019. This positive development overall exceeded Sie- mens Bank’s expectations.

Following moderate growth in fiscal 2017, Siemens Bank recorded a very significant increase in its lending port- folio in fiscal 2018. In addition to the economic recovery of important markets served by Siemens Bank, this was due in particular to the opening of the Singapore branch on March 1, 2017, whose business volume grew significantly in fiscal 2018.

In fiscal 2019, Siemens Bank succeeded in continuing this growth course. Due to the slowdown in economic momen- tum and the increasingly difficult market environment, Siemens Bank has consistently focused its growth on attractive opportunity/risk profiles and the avoidance of excessive credit risk. As a result, the lending portfolio did not grow to the same extent as in the previous year. In its growth, Siemens Bank continued to place great emphasis on broad diversification of its lending portfolio by industry and region, for instance by further expanding its regional presence in Asia and Australia. This – in view of the difficult market environment – very positive development exceed- ed Siemens Bank’s expectations and is also reflected in the persistently high level of irrecoverable lending commitments of €493 million (previous year: €493 million). Contingent liabilities from guarantees existed only to a limited extent at the end of the fiscal year (€33 million; previous year: €0 million) and are part of project financing granted.
The focus of the lending portfolio in fiscal year 2019, as in the previous year, was on activities in the areas of energy (renewables, energy management), infrastructure and health. In addition to project financing, Siemens Bank has a corporate lending portfolio.

Siemens Bank focuses on offering financing solutions to the customers of Siemens AG and its subsidiaries. A large proportion of financing agreements was signed with existing customers of Siemens AG and its subsidiaries, thereby supporting the activities of the Siemens Group. Siemens Bank also enters into financing agreements with Siemens’ target customers, in emerging Siemens markets, and even in situations where there is no Siemens connection at all as long as there are business opportunities with an attractive risk-return profile in the lending market concerned.

In addition to its own lending portfolio described above, Siemens Bank also holds loans on a fiduciary basis whose risks are fully collateralized by cash.

In the deposit and treasury business, the Group financing portfolio, which forms an integral part of the loans and advances to customers, decreased from €335 million to €235 million since the end of the previous fiscal year. The provision of collateral in cash means that Siemens Bank does not bear any credit risk in connection with this business. Compared with the lending business, this lending portfolio clearly is of minor significance within the business model of Siemens Bank as a whole.

Within the deposit and treasury business, the development of liquidity investments – which are reported under loans and advances to banks, credit balances with central banks, private bonds as well as under loans and advances to customers – is closely linked to the economic and regulatory requirements relating to liquidity control. In recent years, Siemens Bank has built up a highly liquid assets portfolio as a liquidity reserve and for liquidity control. A major part of this asset portfolio is in short-term promissory note loans which form an integral part of the loans and advances to customers – is closely linked to the economic and regulatory requirements relating to liquidity control. In recent years, Siemens Bank has built up a highly liquid assets portfolio as a liquidity reserve and for liquidity control.

A major part of this asset portfolio is in short-term promissory note loans which form an integral part of the loans and advances to customers – is closely linked to the economic and regulatory requirements relating to liquidity control. In recent years, Siemens Bank has built up a highly liquid assets portfolio as a liquidity reserve and for liquidity control.

Intra-year fluctuations during the 2019 fiscal year were due to maturities of liquidity-related investments and the decline in short-term deposits. Compared with the previous year, the portfolio of highly liquid assets for purposes of liquidity reserve and liquidity control increased by only 9% (previous year: reduction by 2%). Overall, this was in line with Siemens Bank’s expectations.

### Financial position

The business activities of Siemens Bank are largely financed by deposits and equity. Here, 13% (previous year: 14%) of the recorded business volume of Siemens Bank is financed by equity. Siemens AG as the sole shareholder of Siemens Bank has paid in a share capital of €5,000 thousand (previous year: €5,000 thousand) and capital provisions in the form of other payments into equity amounting to €995,000 thousand (previous year: €995,000 thousand).

Although by far the largest proportion of deposits is made by Siemens AG and its subsidiaries, Siemens Bank also holds deposits of customers from outside the Group. However, Siemens Bank does not accept retail banking deposits. Where deposits are used directly for the purposes of refinancing the lending business, they are matched as far as possible with the lending currencies, in accordance with the expected repayment profiles so that the exposure of Siemens Bank to currency and maturity transformation risk is very limited.

Siemens Bank’s liquidity situation is characterized by a large portfolio of assets with medium-term availability. Siemens Bank also has refinancing options available in particular via Deutsche Bundesbank and Siemens AG. Liquidity is thus always ensured from the point of view of Siemens Bank.

Currently, Siemens Bank has not issued any bonds on capital markets, nor has it placed any promissory note loans or other bonds.

Furthermore, Siemens Bank has not made any substantial capital investments or financial investments in the 2019 fiscal year.

### Results of operations

On the one hand, the 2019 fiscal year was characterized by a further expansion of business activities, which was reflected in equal measure in the growth of net interest income, net fee and commission income and general administrative expenses. On the other hand, the level of additions to provisions for credit risk remained constant compared with the previous year despite continued portfolio growth.

Overall, Siemens Bank was able to continue the positive development of the 2018 fiscal year, posting its highest net operating income before risk allowances since the Bank’s formation.

### Net interest income

Net interest income at Siemens Bank arises from the spread between interest income on loans and investments on one side and refinancing-related interest expense on the other. Interest terms also reflect the effect of inflation. The net interest margin contribution from the lending business generates most of the net interest income. Liquidity investments in the deposit and treasury business normally generate lower interest margins. As the portfolio in the core lending business, in line with expectations, grew constantly and significantly in the 2019 fiscal year, net interest income also grew significantly. However, net interest income is also highly dependent on the volatility of exchange rate changes during the year, as a significant portion of the portfolio is denominated in USD, GBP and AUD. Overall, Siemens Bank was able to continue to generate attractive risk-return profiles in the lending business, as, also against the background of a persistently low interest level in important core markets, new loan transactions were only entered into selectively, and the pursued business strategy was not purely volume-driven. Net interest income developed essentially in proportion to the development of the lending portfolio, which is attributable to continuous growth over the course of the fiscal year. Currency effects largely offset each other in the major currencies. Nevertheless, net interest income growth was slightly below Siemens Bank’s expectations, as interest margins tend to decline due to high competitive pressure in the lending markets.

### Management report

In spite of a continuous growth by 14% (previous year: 13%), net fee and commission income still is of minor significance for Siemens Bank’s results of operations. Siemens Bank earns fee and commission income primarily by providing risk-management and processing services for Siemens AG and its subsidiaries. The costs incurred in providing the services are reported under general administrative expenses. In fiscal year 2019, Siemens Bank took over risk management activities for the Siemens Group from Siemens Treasury GmbH and at the same time to a lesser extent transferred risk management activities for Service Company Financial Services to Siemens Financial Services GmbH. The resulting continuous increase in net commission income was in line with Siemens Bank’s expectations.

A slightly smaller portion of 54% (previous year: 60%) of general administrative expenses at Siemens Bank is attributable to personnel expenses. Siemens Bank employees are not only responsible for carrying out the banking operations as such, but also for providing risk-management and processing services for Siemens AG, its subsidiaries and selected third parties. The other administrative expenses are largely accounted for by the purchase of services from Siemens AG and its subsidiaries as well as from third parties. This purchase of services also includes all IT services required by Siemens Bank. In addition, an increase in general administrative expenses during the last three fiscal years is due to the continuous expansion of the Siemens Bank business activities and the opening of the Singapore branch in the 2017 fiscal year as well as salary increases and higher costs for some service providers. Applying strict cost discipline, Siemens Bank was able to limit the increase in administrative expenses at a slightly lower than expected level.

Other net operating income is for the most part determined by income from currency valuations. The impact of currency effects on the Bank’s profitability is in particular limited through the refinancing of loans in foreign currencies in the same currency. In fiscal 2019, Siemens Bank reports a slightly positive currency income in relation to the total portfolio; last year, Siemens Bank reported a slightly negative currency income in relation to the portfolio.
2. Risk report

2.1 Risk strategy

Corporate management at Siemens Bank adheres to the targets and requirements of the Bank's business strategy. It is not possible to implement the Bank's business strategy and to achieve the specified target returns without consciously taking on risk. Siemens Bank's risk strategy is based on the requirements of the business strategy and constitutes the framework for identifying, assessing, managing and monitoring risk within Siemens Bank.

2.1.1 Objective

The risk strategy defines details of the requirements under the business strategy in relation to the strategic alignment and the individual types of risks, while at the same time taking into account the overall objectives of the business strategy and the risk appetite of Siemens Bank. This forms the basis on which Siemens Bank determines its guidelines for risk management and the target system for risk strategy at the Bank. The most important risk principle is compliance at all times with both internal capital adequacy and liquidity requirements. Top priority is also given to avoiding concentration risk and ensuring compliance with statutory and regulatory requirements. An essential element of the risk strategy implementation is to specifically identify, measure, manage, monitor and report risks that Siemens Bank has already taken on, together with any future risks that may occur. This is also the basis of the integrated management of risk and return targets within the framework of the integrated risk-return management.

Siemens Bank follows a clearly defined process for developing its risk strategy. Based on the business strategy, the risk strategy is adjusted either as required or at regular intervals. The basis for the risk strategy is a detailed analysis of risk factors within Siemens Bank using a risk inventory. The risk inventory defines and analyzes the principal types of risk factors within Siemens Bank using a risk inventory. The risk inventory defines and analyzes the principal types of risk and specifies how these risk types are to be modeled. The results of the risk inventory are used as a basis for the determination of the objectives and measures relating to the risk strategy that are monitored as part of the overall risk report.

Siemens Bank has put in place a comprehensive risk management system in order to ensure that the measures aimed at achieving the objectives in the business strategy and risk strategy are properly implemented. Key components of the risk management system include the internal capital adequacy concept, liquidity risk management and the implementation of an efficient internal control system.

2.2 Risk management and organization

Siemens Bank has put in place a comprehensive risk management system in order to ensure that the measures aimed at achieving the objectives in the business strategy and risk strategy are properly implemented. Key components of the risk management system include the internal capital adequacy concept, liquidity risk management and the implementation of an efficient internal control system.

2.2.1 Organizational structure

The processes, controls and responsibilities with respect to risk management are governed by the rules and regulations for Siemens Bank. These rules and regulations document, in particular, the processes for granting loans, further processing of loans, monitoring of loan processing, intensified and problem obligor management, risk classification and review of credit ratings together with the processes for asset liability management. Decision-making authority is governed by the Siemens Bank authority rules and regulations.

The general frameworks for internal capital management, management and monitoring of individual types of risk and for the methods, processes and limit structure within Siemens Bank are documented in the Bank’s risk and organizational manuals. The risk and organizational manuals are available to all employees of Siemens Bank.
Segregation of functions
Within the organizational structure of Siemens Bank, there is a strictly defined segregation of front office and back office in terms of both functions and disciplinary arrangements, and this segregation applies right up to the Manage-
ment Board level. The activities of the Chief Financial Officer (CFO) and the Chief Risk Officer (CRO) are organized entirely within the back office, whereas the areas covered by the Chief Executive Officer (CEO) are assigned in full to the front office. This strict segregation also applies to the London and Singapore branches. The authority rules and regulations specify that the back office may not be overruled.

Operational management of risk at Siemens Bank is carried out within the risk strategy framework and subject to the limits specified by the back office. The risk strategy framework and risk management limits are defined by the back office, whereas the front office is responsible for the opera-
tional implementation of risk management. Operational risk management is controlled by a risk monitoring unit that is independent in terms of both functional and disci-
plinary arrangements and forms part of the back office in the organizational structure. The responsibilities of the risk monitoring unit include comprehensive analysis and moni-
toring of the risks accepted by Siemens Bank. Risk analysis includes identifying risks taken on by the Bank, developing suitable methods for measuring and quantifying risk, and analyzing the current risk situation. The analysis of the risk situation includes both aspects of economic inter-
ternal capital adequacy. Risk monitoring comprises activities to quantify and validate the risks taken on by the Bank, activities to monitor the authorized limits and internal capital adequacy and activities associated with risk reporting.

Committees
The Siemens Bank Risk Committee is the central com-
mittee responsible for implementing integrated risk-return manage-
ment and risk management within the meaning of section 25a (1) of the German Banking Act (KWG). In partic-
ular, the Risk Committee supports the Management Board in developing and adopting the risk strategy as well as designing the internal capital adequacy concept. The Risk Committee is responsible for ensuring that the internal audit function fulfills its responsibilities properly. The framework of the internal audit function’s tasks is described in a rolling three-year audit framework plan that is prepared using a risk-based approach and updated yearly. The operational execution of audits for which risk function is outsourced is carried out by the internal audit function of Siemens AG. The findings of the audits are summarized in quarterly and annual reports based on the consultation with the internal audit officer and then presented to the Management Board for approval.

A further essential element of the internal control system is the compliance function. Siemens Bank has pooled the functions of the compliance officer and of the anti-money-laundering officer in one central function. This function is responsible for monitoring the implementation of the money-laundering, fraud prevention and compliance, reports directly to the Management Board of Siemens Bank and has the authority to issue binding instructions – without restric-
tions regarding the issues within its area of responsibility. The function assesses compliance with the internal regulations relating to anti-money-laundering and other criminal offenses as well as compliance-relevant, company-specific provisions. It also monitors compliance with these provisions, regulations and other requirements and sup-
ports and advises the Management Board and the busi-
ness units regarding this compliance. Regarding further compliance-relevant internal provisions such as regulatory questions or implementation of MaRisk, the compliance function is assisted, in particular, by Risk Controlling and Regulatory Reporting. Regardless of the superordinate role of the compliance function, the members of the Manage-
ment Board and the business units remain fully responsible for compliance with all legal requirements and other regu-
lations. The central function reports to the Management Board on a quarterly basis as well as in a yearly compre-
sensive compliance report, listing its activities and, where rele-
vant, highlighting any identified deficiencies and measures implemented to mitigate these deficiencies. The internal audit unit also prepares the annual money-laundering report.

Risk reporting
Within Siemens Bank, risk reporting to the Management Board, Supervisory Board and the Risk Committee consti-
tutes part of risk controlling, reports are submitted both on a regular basis and ad hoc as required.

The central risk reporting tool is the quarterly overall risk report, which includes a comprehensive internal capital adequacy assessment and detailed reports on individual risks as well as the risk capital planning. The report on internal capital adequacy is based on a comprehensive internal capital adequacy assessment, which includes an analysis of the current internal risk capital requirement in both normal and stress scenarios. The overall risk report is complemented by regular, standard-
ized reports on default risk, market risk, liquidity risk, funding risk and operational risk as well as quantifiable, nonmaterial risks. Default risk is largely reported within the context of the monthly credit risk report. Reports focus on the economic and regulatory capital requirement for the credit risks taken on by the Bank and the portfolio analysis regarding concentration risk incurred by the Bank. The analysis of concentration risk includes country risk, industry risk, con-
centrations in particular credit rating categories and cat-
centrations in individual obligors.

Market risk is reported monthly as well as daily. The focus of the monthly reports is on the economic capital require-
ment for the market risk taken on by the Bank. The daily reports focus on the monitoring of the operational value-at-

The reporting of liquidity risk is performed monthly and through the daily liquidity gap profile. Funding risk is also reported daily. Risk reporting is focused on the economic capital requirement for the funding risk taken on by the Bank, on monitoring the operational liquidity and refinanc-
ing limits and on the regulatory key indicators relating to the liquidity coverage ratio and the minimum liquid assets. The reporting of operational risks is part of the quarterly overall risk report. Losses in excess of €50,000 are reported on an ad hoc basis to the Management Board. Addition-
ally, a detailed report is prepared showing the results of the weekly self-assessment as well as the resulting action plans. Implementation of the measures is monitored on a quar-
terly basis.

The reporting for nonmaterial, quantifiable risks, such as prepayment risk or business risk in the context of swings in the present value of interest margins, occurs monthly and is embedded in other reports such as the market risk report.

Management report

(translation of the German original)
2.2.2 Internal control system for accounting processes

Objective

The objective of external financial reporting is both to determine the measurement of dividends and to provide information in the proper manner and by the specified deadline dates to the users of the annual financial statement and management report. Siemens Bank has established an internal control system for its accounting processes, the purpose of which is to ensure that external financial reporting is conducted in the proper manner and breaches of accounting standards are avoided.

Responsibilities

Regulatory & Finance is responsible for external financial reporting and for the internal control system related to accounting processes. This department reports to the CFO and the Management Board.

Processes and controls are also included in the auditing activities of the internal audit unit.

Procedures

The procedures and the internal control system for accounting processes are fully documented in process descriptions and work instructions. Accounting and valuation methods are described in the Siemens Bank Accounting Policy. Generally accepted accounting and valuation principles are applied when preparing the annual financial statement and management report. The appropriateness of these principles is regularly reviewed.

As far as possible, automated IT-based accounting procedures are used in order to reduce operational risk when preparing financial statements. Any modifications in IT systems relevant to accounting are subject to standardized authorization and verification procedures. Suitable reconciliation activities and controls ensure the quality of the data processing. Manual entries are subject to additional process checks. A contingency plan has also been put in place to cover accounting processes.

Further development and quality assurance

The internal control system for accounting processes and the underlying guidelines and work instructions are reviewed for their appropriateness once per year and additionally triggered by a particular event. A review is also carried out as part of the authorization process for new products to establish whether and to what extent the existing rules and regulations need to be modified. Training plans have been defined for the employees in Regulatory & Finance. These plans are revised and updated each year.

2.2.3 Integrated risk-return management and internal capital adequacy

Integrated risk-return management

The management of internal and regulatory capital adequacy requirements, the management of liquidity risk, monthly performance controlling and the management of costs arising in connection with internal and regulatory capital requirements is an integral part of integrated risk-return management at Siemens Bank. The management of internal capital is based on an economic capital adequacy approach in which economic capital is the key risk variable.

The monitoring and control of economic and regulatory capital adequacy enables the Bank to ensure on an ongoing basis that the risk taken on by the different fields of activity at Siemens Bank is at all times consistent with the available capital both at the overall bank level and within individual types of risk. The Management Board of Siemens Bank specifies the capital resources necessary for the Bank based on the business risk strategy and in accordance with the defined target returns and strategic risk requirements. As part of the Bank’s internal capital adequacy activities, the Management Board ensures on a continuous basis that there is an appropriate ratio between the Bank’s risk profile and its available risk-taking potential.

Within the overall context of integrated risk-return management, economic risk capital management is complemented by the monitoring and control of liquidity risk. Siemens Bank may only take on liquidity risk within the risk tolerance parameters specified by the Management Board. The critical factor when specifying the risk tolerance and the associated limits is to ensure the solvency of Siemens Bank, even in the event of a serious crisis.

The costs of economic capital adequacy requirements are factored into pricing and are integrated into performance measurement. Key performance indicators of pricing are the Economic Value Added (EVA) and the Return on Equity (ROE) based on the economic capital (Return on Risk Adjusted Capital, RoRac).

Internal capital adequacy

Siemens Bank has drawn up a concept for monitoring its internal capital adequacy in order to ensure that it has sufficient capital and liquidity at all times as required by section 25a KWG. The Bank’s Management Board reviews the internal capital adequacy concept on an annual basis and in the intervening period if warranted by a change in circumstances and modifies the concept where required and in compliance with the business and risk strategy. The modified concept is then approved by the Bank’s Supervisory Board.

Siemens Bank applies a creditor-protection perspective (“gone concern concept”) in its internal management and limitation of risk. The gone concern method is based on a comprehensive risk approach combined with a high confidence level, the primary objective of which is to provide effective protection for creditors. The confidence level is in this case based on Siemens Bank’s current target rating of AA-. This target rating means the target probability of surviving is 99.95% with a risk horizon of one year. In addition to the creditor protection perspective, Siemens Bank also pursues the objectives of the “normative perspective” as defined in BaFin’s Guidelines Capital Adequacy – Regulatory Assessment of Capital Adequacy Concepts (“Leitfaden Risikotragfähigkeit – Aufsichtsrechtliche Beurteilung von Risikotragfähigkeitskonzepten”) from 2018. The normative perspective combines the requirements of regulatory capital adequacy and internal capital adequacy with the objective of ensuring regulatory capital adequacy and integrated risk capital planning at all times.

Siemens Bank determines its risk-taking potential with a value-based approach in accordance with the BaFin circular Guidelines Capital Adequacy – Regulatory Assessment of Capital Adequacy Concepts (“Leitfaden Risikotragfähigkeit – Aufsichtsrechtliche Beurteilung von Risikotragfähigkeitskonzepten”) from 2018. The risk-taking potential comprises partly regulatory tier 1 and tier 2 capital (together referred to as core risk-taking potential) and partly an adjustment for the hidden reserves and charges from the portfolio of Siemens Bank. Expected losses, potential costs from eliminating liquidity gaps and administration costs for the portfolio are also taken into account in the calculation. If the result is a negative amount, the core risk-taking potential is reduced by that amount. If the result is a positive amount, the amount is reduced by a risk buffer and is included in the internal risk adequacy calculation as additional risk-taking potential.

As of September 30, 2019, the risk-taking potential of Siemens Bank consisted of the following:

Figure 4: Composition of the risk-taking potential

Management report 2 Risk report 2.2 Risk management and organization
When determining the economic capital requirement, in accordance with CRR, Siemens Bank simulates that all variable-interest transactions from the prepayment risk, Siemens Bank uses a stress scenario which has a confidence level of 99.95% and a risk horizon of one year. For material risks, the input parameters for the various models are adjusted on the basis of both hypothetical and historical stress scenarios. The Bank analyzes both risk-specific scenarios and comprehensive scenarios that involve some or all of the risk types. Stress testing is integrated into the analysis of internal capital adequacy to enable the Bank to identify any need for action at an early stage and ensure internal capital adequacy even when tough market conditions prevail.

The required risk capital relating to the buffer for other, nonmaterial risks is reported as utilizing the full amount of the corresponding available risk-taking potential. The most significant risk is default risk, which is also the main driver behind risk-taking potential utilization in the stress case. This reflects Siemens Bank’s business and risk strategies.

The regulatory capital corresponds to the core risk-taking potential for determining internal capital adequacy but without the adjustment for prudential valuation. Siemens Bank uses the standardized credit risk approach (KSA) for the purposes of measuring and covering the regulatory capital requirements with respect to default risk. It uses the standardized approach for measuring market risk and the basic indicator approach (BIA) for measuring operational risk.

### Table: Allocation of the available risk-taking potential and risk capital requirement by risk type

| Risk-taking potential in stress scenario | 1,482.3 | 1,356.0 |
| Risk capital for operational risk | 25.0 | 21.8 | 25.0 | 20.5 |
| Risk capital for default risk | 600.0 | 450.8 | 600.0 | 364.0 |
| Risk capital for market risk | 20.0 | 13.3 | 20.0 | 9.4 |
| Risk capital for funding risk | 30.0 | 21.5 | 30.0 | 14.5 |
| Normal case | 675.0 | 507.4 | 675.0 | 408.5 |
| Risk capital for operational risk | 24.4 | 20.9 |
| Risk capital for default risk | 671.8 | 547.9 |
| Risk capital for market risk | 20.0 | 13.8 |
| Risk capital for funding risk | 47.9 | 31.7 |
| Risk capital for business risk | 121.7 | 38.5 |
| Risk capital for prepayment risk | 0.0 | 0.0 |
| Buffer for other nonmaterial risks | 20.0 | 20.0 |
| Stress case total | 1,482.3 | 905.8 | 1,356.0 | 700.6 |

Figure 5: Allocation of the available risk-taking potential and risk capital requirement by risk type

The risk-taking potential in a stress scenario results from the risk-taking potential less additional losses in the stress scenario. The additional risk-taking potential in a stress scenario serves as extra risk-taking potential in order to cover nonmaterial risks as well as risks in a stress scenario. Only the core risk-taking potential is used to cover the material risks. To quantify the internal capital requirement for default risk, market risk, funding risk and business risk, Siemens Bank applies value-at-risk approaches with a confidence level of 99.95% and a risk horizon of one year. For prepayment risk, Siemens Bank uses a stress scenario which simulates that all variable-interest transactions from the lending business are prepaid on the reporting day. Operational risk is quantified using the basic indicator approach in accordance with CRR.

When determining the economic capital requirement, Siemens Bank does not assume that there will be any diversification effect between the individual risk types. Liquidity risk (in the sense of risk of insolvency) is not covered by risk capital as part of the internal capital adequacy analysis because there is no meaningful way in which this can be achieved. Instead, liquidity risk (in the sense of risk of insolvency) is managed by using a liquidity gap profile including a system of limits specified by the ALM Committee. These limits are derived from Siemens Bank’s liquidity risk tolerance. Here, the system of limits is monitored, analyzed and reported holistically together with the CRR capital and liquidity requirements.

Other risk types currently classified by the Bank as nonmaterial – such as strategic risk, and model risk – are together covered by an overall safety buffer. Utilization of the risk-taking potential in the stress scenario increased from €700.6 million to €905.8 million during the fiscal year, while the risk-taking potential under stress increased by €126.3 million. The highest utilization of the risk-taking potential was recorded on the balance sheet date at the end of the fiscal year.

The Management Board is very satisfied with risk development during the completed fiscal year, as the risk capital requirements increased at the expected rate in relation to the expanding lending portfolio. For fiscal year 2020, Siemens Bank is forecasting that, based on the business and risk strategy, internal capital adequacy will be assured at all times both in the normal case and if the stress scenarios are taken into account.

Figure 6: Composition of regulatory capital according to the final financial statements as of September 30, 2019
Siemens Bank must ensure a total capital ratio of 11.06% according to CRR in conjunction with the relevant provisions of the KVG. The total capital ratio also includes the capital preservation buffer and the anti-cyclical buffer, which must be furnished from common equity tier 1 capital. The total capital ratio is the ratio of the total amount from risk-weighted assets to Siemens Bank’s regulatory capital. As of September 30, 2019, the total capital ratio (Pillar I) for Siemens Bank was 14.41% according to the final financial statements (previous year: 16.44% according to the approved financial statements). As Siemens Bank’s equity comprises predominantly tier 1 capital components, the total capital ratio is only slightly higher than the tier 1 capital ratio (Pillar I) of 13.78% according to the final financial statements (previous year: 15.81% according to the approved financial statements). Both ratios are therefore above the required capital ratios specified by the regulatory requirements.

The difference between the required regulatory capital of €579.3 million (previous year: €505.6 million) and the required financial capital in the normal scenario of €507.4 million (previous year: €408.5 million) is the result of Siemens Bank using its own risk models in the calculation of the required economic capital.

2.3 Default risk

Siemens Bank understands default risk to mean possible loss of value resulting from partial or complete default or from a deterioration in the credit rating of customers of Siemens Bank. Within default risk overall, Siemens Bank makes a distinction between credit risk, counterparty risk and issuer risk.

The framework of rules and regulations for identifying, managing and monitoring default risk comprises the Credit Policy and its associated guidelines for default risk management. The Credit Policy is a comprehensive description of procedures, tools, roles and responsibilities for all persons involved in the process. The Policy is reviewed at least once a year to ensure that it is up to date.

Credit risk

Credit risk refers to the risk that a borrower will fail to meet its obligations to Siemens Bank under a loan agreement, either partially or in full. Credit risk also includes transactions risk under loan agreements, the risk of default in connection with deposits made by Siemens Bank and country risk. Country risk is the risk of claims on monetary transfers or currency conversions as a result of official decisions or political restrictions in a particular country. Country risk also includes sovereign risk, i.e., the credit risk in relation to governments or central banks. Credit risk is the principal form of default risk to which Siemens Bank is exposed.

Counterparty risk

Counterparty risk refers to the risk that a counterparty in a forward or derivative transaction will fail to meet its obligations to Siemens Bank, either partially or in full. Counterparty risk is partially or partially due to a migration to a default class, but also economic loss resulting from partial or complete default or from a deterioration in the credit rating of customers. In addition to the correlations of the risk units, the stronger the correlation between a risk unit and macroeconomic and borrower-specific factors. The stronger the correlation between a risk unit and macroeconomic and borrower-specific factors, the greater the fluctuation in this unit’s probability of default in the event of changes in the macroeconomic factors. The fluctuation in the macroeconomic and borrower-specific variables, and therefore the probability of default, is simulated using a Monte Carlo approach. A loss distribution for the lending portfolio is generated from the resulting changes in the probability of default. In addition to the correlations of the risk units, another key input variable for the Monte Carlo simulation is the probability of a credit rating migration. To obtain this data, the Bank draws a table based on historical credit rating migrations. At each stage in the Monte Carlo simulation, the table provides the probability of migration to a better or worse rating category for each risk unit. The simulated loss distribution takes into account not only losses due to a migration to a default class, but also economic losses by a risk unit caused as a result of the deterioration

2.3.1 Risk classification

The classification of risk and the associated credit rating for Siemens Bank customers plays a key role in the process for granting loans, assessing new business and determining the internal risk capital requirement. Siemens Bank has a number of rating procedures at its disposal for determining customer credit ratings. The rating procedures are based on the attributes of the different customer groups and on specific product features; for example, there are separate criteria for determining ratings in connection with project finance entities. Rating procedures are based on statistically validated models and are optimized on an ongoing basis. Regular backtesting forms the core of this optimization process in order to ensure that the Bank achieves the best possible level of forecast quality and discriminatory power within its rating procedures.

Siemens Bank has defined 10 rating classes to enable it to achieve a meaningful differentiation between credit ratings. There are up to three further subclasses within each rating class (e.g., 1+, 1, 1-). This system therefore consists of a total of 19 different credit rating categories overall. The rating categories can be reconciled with external credit ratings using a conversion table. If credit ratings are available from an external provider in any particular instance, these external ratings can be used as an input for a credit rating procedure. All external credit ratings used by the Bank in its risk classification procedures are obtained exclusively from S&P, Fitch or Moody’s. Even if an external credit rating is used, Siemens Bank still carries out a credit rating analysis using its own knowledge and information. Credit rating classes 1 to 7 are used for unproblematic customers.

If a borrower is classified with a credit rating of 8+ or worse, the borrower concerned is made subject to intensified obligor management. Intensified obligor management may also take place without a downgrade to a rating of 8+ or worse if other criteria for intensified obligor management are met – e.g., a request by the customer for loan restructuring or a high probability of imminent default. If a borrower is classified with a credit rating of 9 or worse, the borrower concerned is transferred to the problem obligor management unit. Rating category 9 covers all borrowers who are subject to loan restructuring, category 10 comprises all borrowers already in default and in the process of winding-up.

The risk classification process also always takes into account the country risk associated with a borrower. The country rating of a borrower must always be considered in relation to the country risk of the borrower’s country and is generally subject to an upper limit based on the country risk.

A borrower’s credit rating is reviewed at least once a year on the basis of the latest available information. Credit ratings are reviewed immediately if there are changes in specific borrower circumstances or significant changes in the economic environment.

2.3.2 Portfolio management and modeling

The lending portfolio is managed using an integrated approach comprising management of expected and unexpected losses, procedures for early detection of risk, stress testing procedures and a comprehensive assessment approach of new business.

Expected loss

To determine the expected loss, the Bank forecasts the average loss it expects based on the current credit rating and the current expected recovery rate for each and every borrower. The expected loss is a key figure in portfolio analysis and a key input variable for pricing new business. When determining risk as part of the portfolio analysis, the expected loss is calculated for a period of one year; the maturity of the exposure is used for the purpose of pricing new business.

Unexpected loss

A credit value-at-risk approach is used to analyze lending portfolio risk and determine the economic capital requirement. The credit value-at-risk serves to quantify an unexpected loss in the lending portfolio using the borrower’s return on company value. To determine the return on company value, Siemens Bank uses a multifactor model comprising both macroeconomic and borrower-specific factors. Customers with similar economic characteristics are aggregated into risk units in order to calculate the unexpected loss. The stronger the correlation between a risk unit and macroeconomic factors, the greater the fluctuation in this unit’s probability of default in the event of changes in the macroeconomic factors. The fluctuation in the macroeconomic and borrower-specific variables, and therefore the probability of default, is simulated using a Monte Carlo approach. A loss distribution for the lending portfolio is generated from the resulting changes in the probability of default. In addition to the correlations of the risk units, another key input variable for the Monte Carlo simulation is the probability of a credit rating migration. To obtain this data, the Bank draws a table based on historical credit rating migrations. At each stage in the Monte Carlo simulation, the table provides the probability of migration to a better or worse rating category for each risk unit. The simulated loss distribution takes into account not only losses due to a migration to a default class, but also economic losses by a risk unit caused as a result of the deterioration
Early detection of risk

The credit rating process at Siemens Bank is based on established reporting and monitoring processes, ensuring that credit ratings are up to date. Qualitative and quantitative information is regularly monitored, classified and promptly included in any credit rating assessment.

Stress testing

Lending-portfolio modeling and management using credit value-at-risk is complemented by targeted sensitivity analyses and stress tests. The stress tests and sensitivity analyses for credit risk are carried out regularly for the overall risk reporting as well as ad hoc. The purpose of sensitivity analyses is to consider individual risk factors in isolation. Stress tests, on the other hand, provide a holistic view for the purposes of assessing credit risk. By integrating stress testing into the analysis of internal capital adequacy, the Bank is able to identify any areas in which action is required. Inverse stress tests also play a specific role. Although these inverse tests do not form part of the analysis of internal capital adequacy, they nevertheless constitute important indicators in the early detection of risk and in the identification of possible risks to internal capital adequacy.

The model scenarios used for the stress tests take into account both historical scenarios and the strategic direction currently being pursued by Siemens Bank. At the core of the scenarios is a macroeconomic approach that simulates the impact of a recession on the lending portfolio and the internal capital adequacy. Within the scenarios, Siemens Bank makes a distinction between a shallow, a moderate and a severe recession.

Backtesting

Siemens Bank carries out monthly backtesting of the risk classification and probabilities of default as well as an analysis of rating migrations in order to ensure and refine the level of quality in its modeling of expected and unexpected loss (credit value-at-risk). In addition, other parameters used in determining risk are examined as part of an annual review of risk models and rating procedures. Backtesting of rating procedures in terms of discriminatory power and forecast quality takes place monthly. In the event of anomalies, the results are used as the basis for adjusting the structures and the methodology of the rating procedures.

Pricing

As part of the credit process, new business is assessed using measurement methods and pricing tools. These methods and tools factor in refinancing costs, expected losses and tax effects as well as administrative expenses and the costs in connection with economic risk capital. All essential aspects of risk and return are therefore taken into account in the assessment of new business. The parameterization of the pricing tool is based on the parameterization defined within the portfolio management process and thereby ensures consistency with the Bank’s integrated risk-return management. Key figures determined from the pricing processes are the EVA and the RoRi based on the RoRaC of such new business.

2.3.3 Risk mitigation techniques

The risk classification and the accompanying credit rating of the borrower form the basis for the credit decision and for the analysis of the expected and unexpected loss. The borrower’s credit rating itself is determined independently of any individual transactions and, as a result, also independently of available collateral. However, collateral still represents an important component in assessing risk and calculating economic capital requirements in a lending transaction.

Types of collateral

In its management of credit risk, Siemens Bank makes a distinction between two fundamental categories of collateral:

- The first category comprises assets in the form of financial or other collateral that the Bank can realize in the event of a default, thereby allowing the Bank to limit the incurred loss. This category includes, in particular, physical assets in the case of capital investment loans or project finance as well as cash collateral.
- The second category comprises collateral in the form of guarantees furnished not by the borrower but by independent third parties, for example government export credit insurance.

Collateral management

Both categories of collateral form an integral part of credit risk management at Siemens Bank provided that such collateral meets internal requirements for collateral that can be accepted by the Bank. Specifically, collateral in the second category is only acceptable if the credit rating of the guarantor is better than the rating of the original borrower, the guarantee is directly legally enforceable, all documentary requirements are met and the guarantor is not an individual. In the case of syndicated loans, management of collateral may be transferred to another bank that is a member of the loan syndicate.

Collateral in the first category results in a reduction in the expected and in the unexpected loss because the recovery rate for the transaction has been increased or because an asset recovery has been claimed. Collateral in the second category also leads to a reduction in the expected and unexpected loss in that the credit rating of the guarantor is also factored into the calculation.

Country risk

Country risk is measured by analyzing concentration risk for individual countries in terms of economic capital requirement and credit exposure. Country risk is limited both by preventive action in which exposure limits must be adhered to during the course of the credit process and by the ongoing analysis of concentration risk in individual countries.

in credit rating. The exposure for a risk unit comprises the loan amount paid out and any weighted amount related to open external credit lines. In addition to losses due to rating migration, the portfolio model also takes into consideration fluctuations of the recovery rate and asset recoveries. While negative recovery fluctuations lead to higher loss in the event of rating migration, asset recovery fluctuations lead to direct loss in market value. The credit value-at-risk and the risk contributions for the risk units are then derived from the loss distribution. In addition to the credit value-at-risk, the risk contributions from the largest portfolios and segments are also calculated in order to measure concentration risk.

Country risk is limited both by preventive action in which exposure limits must be adhered to during the course of the credit process and by the ongoing analysis of concentration risk in individual countries.
2.4.1 Risk management

Liability risk (in the sense of risk of insolvency)

Liability risk (in the sense of risk of insolvency) is the risk that Siemens Bank will not be able to meet its payment obligations (in euros or in a foreign currency) on time or in full. Siemens Bank uses a detailed, multi-currency liquidity gap profile to manage liability risk. In this profile, the balances of all determinants, optional and modeled cash flows are reported on a daily basis. A subsequent gap analysis for the individual time frames then ensures that any emerging liquidity shortfall is detected at an early stage and that Siemens Bank can meet its payment obligations at all times. In a procedure similar to that used for the multi-currency liquidity gap profile in euros, individual liquidity gap profiles are generated and analyzed daily for each key currency.

In order to ensure that liability is maintained during the course of the day, the latest account balances are continuously monitored.

If a liquidity shortfall arises nevertheless, Siemens Bank has a liquidity contingency plan that defines communication protocols and a comprehensive range of contingency measures. Monitoring and measurement of the liquidity coverage ratio and the minimum liquid assets (for the Singapore branch) is integrated into daily liquidity management.

2.4.2 Funding risk

Funding risk

Funding risk is the risk that Siemens Bank will only be able to cover its liquidity gap profile by obtaining funds at increased market interest rates. The maximum present value loss arising from changes in refinancing terms and conditions is calculated daily in the form of liquidity value-at-risk (LVaR) based on the net cash flows determined in a stress scenario for the individual time brackets then ensures that any emerging liquidity shortfall is detected at an early stage and that Siemens Bank can meet its payment obligations at all times. In a procedure similar to that used for the multi-currency liquidity gap profile in euros, individual liquidity gap profiles are generated and analyzed daily for each key currency.

In order to ensure that liability is maintained during the course of the day, the latest account balances are continuously monitored.

If a liquidity shortfall arises nevertheless, Siemens Bank has a liquidity contingency plan that defines communication protocols and a comprehensive range of contingency measures. Monitoring and measurement of the liquidity coverage ratio and the minimum liquid assets (for the Singapore branch) is integrated into daily liquidity management.
2.4.2 Modeling

Modeling

In order to ensure the liquidity gap profile is a full and complete presentation of the current liquidity position, Siemens Bank includes optional and modeled cash flows as well as determinisitic cash flows in the profile. These optional and modeled cash flows include, for example, outstanding project finance drawings, committed but undrawn lines of credit, the notified lending and deposit business, possible drawings from the guarantee exposure as well as possible and imminent losses in the lending portfolio. The assumptions made allow Siemens Bank to draw up a complete, risk-adjusted and comprehensive presentation of its liquidity position.

Siemens Bank uses an internal liquidity value-at-risk-model (LVaR) to measure funding risk. Economic capital is determined by calculating the value-at-risk with a confidence level of 99.95% and a risk horizon of one year. Operational value-at-risk limits are then derived from this calculation. If the operational value-at-risk limits are determined and monitored using a different confidence level or risk horizon, the Bank ensures that there is always reconciliation to internal capital adequacy.

Prepayment risk is modeled through a stress case and calculated monthly. The stress case assumes that all transactions from the lending business are prepaid on the reporting date, and the resulting costs are included in the internal capital adequacy assessment.

2.4.3 Liquidity analysis as of September 30, 2019

The liquidity gap profile comprising deterministic, optional and modeled cash flows shows that Siemens Bank has cash flows in 1.25-year to 6-year time brackets as of September 30, 2019. All cumulative cash flows up to 12 months are positive. All operative liquidity limits were being complied with at all times. The operational refinancing limit was slightly exceeded on one day of the year. Measures were implemented on the same day so that the limit was complied with again on the following day. Otherwise, the operational refinancing limit was also always being complied with. In order to monitor the limits, optional and modeled cash flows are included in these figures and are already adjusted for risk. Siemens Bank maintains a liquidity buffer of assets eligible as collateral with central banks and deposits with central banks. As of September 30, 2019, this buffer amounted to €912.0 million (previous year: €706.2 million).

Within strict limits, deposits are also used for refinancing lending business. Given the largely maturity-matched refinancing of the lending business, Siemens Bank has not exceeded its stress in cash and deposits. Siemens Bank understands market risk as possible loss of economic capital, which is caused primarily by the value resulting from fluctuations in market prices and from volatility in financial instruments.

2.4.4 Stress testing

Siemens Bank has a portfolio of highly liquid assets. Siemens Bank holds a buffer consisting of high-quality, liquid assets eligible for use as central bank collateral as well as cash. A core component of this strategy is Siemens Bank’s participation in the Deutsche Bundesbank’s loan submission program KfF (Krediteinschreibungsverfahren). The minimum reserve at the Deutsche Bundesbank is not included in the buffer. To ensure compliance with the liquidity coverage ratio and with the minimum liquid assets (for the Singapore branch), Siemens Bank has a portfolio of highly liquid assets.

2.5 Market risk

Siemens Bank understands market risk as possible loss of value resulting from fluctuations in market prices and from volatility in financial instruments.

Siemens Bank does not have a trading book. Currently, the Bank’s business and risk strategy only allows it to enter into trading deals for the purpose of mitigating risk. To the greatest possible extent, Siemens Bank therefore avoids market risk positions and only enters into such transactions within tightly specified limits. Currently, market risk at Siemens Bank comprises interest-rate risk and currency risk.

Market liquidity risk is managed in an integrated approach in conjunction with the management of market risk because Siemens Bank is only exposed to market liquidity risk as a result of ordinary interest-rate and currency derivatives that it enters into to reduce the risk arising from open risk positions.

2.5.1 Risk management

The ALM Committee at Siemens Bank is responsible for asset liability management and therefore also for the management of market risk. In particular, the ALM Committee specifies the operational limits for the management of market risk based on the risk-taking potential allocated in the internal capital adequacy concept.

Responsibility for operational management within the system is allocated to the Siemens Bank Treasury function. Siemens Bank takes on market risk positions solely in the context of its asset liability management. Currently, the Bank may only enter into derivatives in order to reduce risk and not to take on new market risk positions.

2.5.2 Modeling

Risk model

Siemens Bank uses a value-at-risk model, based on a variance/covariance approach, to measure market risk. Economic capital is determined by calculating the value-at-risk with a confidence level of 99.95% and a risk horizon of one year. Operational value-at-risk limits are then derived from the calculation. If the operational value-at-risk limits are determined and monitored using a different confidence level or risk horizon, the Bank ensures that there is always reconciliation to internal capital adequacy.

In addition to measuring present value market risk, Siemens Bank also calculates monthly the risk to measure net interest income (NII) in accordance with the European Banking Authority (EBA) guidelines for managing interest rate risk in the banking book (IRRBB). This NII value-at-risk is integrated into Siemens Bank’s quarterly internal capital adequacy assessment.

Backtesting

The one-day value-at-risk is backtested in order to ensure the quality of the forecast produced by the value-at-risk model. The change in value in the underlying positions (hypothetical income statement) is compared with the calculated value-at-risk. If the hypothetical income statement exceeds the calculated value-at-risk more than seven times within a year, Siemens Bank makes adjustments to the model. This may involve either a general modification of the model or the introduction of a penalty factor.

2.5.3 Market risk analysis as of September 30, 2019

As of September 30, 2019, the required economic capital for market risk was €13.3 million (previous year: €9.4 million). The increase in risk capital requirements compared with the previous year was caused mainly by more active ALM management. As last year, this capital requirement was covered by an allocated risk-taking potential of €20.0 million.

Management report 2 Risk report 2.4 Liquidity risk 2.5 Market risk

(translation of the German original)
2.6 Operational risk

Operational risk (OpRisk) is defined as the risk of losses resulting from inappropriate or failed processes or technical systems or inappropriate behavior or failures on the part of individuals or resulting from external events. This definition includes legal and reputational risk.

The framework of rules and regulations for identifying, managing and monitoring operational risk is provided by the OpRisk Policy. This Policy is a comprehensive description of procedures, tools, roles and responsibilities for all persons involved in the process. The Policy is reviewed at least once a year to ensure that it is up to date.

The organizational structure of OpRisk management comprises both central and decentral components. Basic responsibility for the management of operational risk lies at the decentral level with the relevant Siemens Bank departments and units. This management is coordinated by an OpRisk manager appointed by the Management Board. The OpRisk manager acts as a central point of contact for all matters concerning OpRisk management.

2.6.1 Risk classification and management

Siemens Bank conducts an annual self-assessment in which it systematically collects and analyzes data on operational risk. The various risks are then prioritized based on the risk potential determined in the analysis. Thereafter, the Bank initiates appropriate measures that are subject to continuous monitoring in order to mitigate any critical risks that have been identified.

Any losses actually incurred above a defined threshold value are recorded without delay in the Bank’s own database of losses and analyzed to establish the cause of the losses. The Risk Committee decides on any action that needs to be initiated, and the OpRisk manager monitors the implementation of such action.

Siemens Bank also has a comprehensive contingency plan to ensure that the business can continue to operate in the event of process or system failures. This plan is regularly reviewed to verify that it is fit for this purpose.

2.6.2 Risk reporting

Operational risk forms an integral part of the overall risk report and is subject to regular quarterly and annual risk reporting. The key risk indicators (KRIs) are monitored and reported monthly.

Ad hoc reports are also used to report any material losses to the Management Board without delay. These reports include any reputational damage or losses due to fraud.

2.6.3 Operational risk analysis as of September 30, 2019

The total value of operational losses in the past fiscal year was below €0.1 million.

The required economic capital for operational risks as of September 30, 2019, was €21.8 million (previous year: €20.5 million). The required capital is based on the regulatory calculation specified in the CRD and is adjusted yearly by the Management Board based on the approved financial statements. As last year, this capital requirement was covered by an allocated risk-taking potential of €25.0 million.

An early warning system has been implemented on the basis of key risk indicators. These indicators are monitored monthly and are regularly screened by the Risk Committee.

Siemens Bank uses the basic indicator approach (BIA) as specified in CRD in order to measure and cover the regulatory capital requirement for operational risk.

To measure the required economic capital, Siemens Bank reduces the available risk-taking potential by the amount determined for regulatory purposes under the BIA. The Bank also conducts regular stress tests on its economic capital adequacy requirements as part of the internal capital adequacy assessment in order to minimize the risk in this static approach caused by possible fluctuations in the results of operations.

2.7 Business and strategic risk

Business and strategic risk is managed by the Management Board of Siemens Bank at an overarching level for the entire Bank rather than as part of the day-to-day business of individual departments or segments.

Business and strategic risk is assessed during the course of the process for determining the Bank’s business and risk strategies. Business risk is managed by identifying potential business and specifying target markets as part of business-strategy planning and by subsequently deriving business-strategy targets and action plans. Using the business strategy as a basis, a risk inventory is performed for business and strategic risks. The risk inventory includes an inventory of the methods used for the risk quantification and risk management as well as an analysis of the relevant risk factors and a forecast of the required capital for Siemens Bank. After the completion of the risk inventory, targets and measures for the individual risks are defined. The targets and measures are continually monitored by the back-office functions.

Business risk in the sense of a net present value margin risk represents the quantifiable portion of the business risk. This is taken into account separately in the internal capital adequacy assessment and is related to the amount of the additional risk-taking potential.

Siemens Bank uses a value-at-risk model, based on a variance-covariance method, to measure business risk. Economic capital is determined by calculating the value-at-risk with a confidence level of 99.95% and a risk horizon of one year. Operationally meaningful management of business risk in terms of net present value margin risk is not possible through a limit structure; therefore, the Management Board manages this risk on a bank-wide level. In the past fiscal year, capital requirements for this risk rose from €58.5 million to €121.7 million. The increase was mainly due to the growth of the lending portfolio and increased interest rate and FX volatilities, in particular for the USD and GBP yield curves and the EUR/GBP exchange rate.

Changes in the overall risk situation, and therefore also in strategic risk, are analyzed quarterly by the Risk Committee. Particular emphasis is given to analysis of the lending portfolio in terms of strategic alignment and trends.

3 Further information

Siemens Bank maintains branches abroad in London, United Kingdom, and in Singapore. These branches operate in the lending business and, to a limited extent, also in the fee business. In addition to the headquarters in Munich, the office at the London banking center was established as a second essential pillar for the acquisition of new business in Europe and the Middle East, while the Singapore branch, founded in 2017, serves to generate new business in Asia and Australia and to establish local lending risk management. There are no other branches abroad.

As in the previous year, Siemens Bank was involved in a large number of Group-wide programs and initiatives in 2019 under the auspices of Siemens AG, such as

- compliance programs to ensure compliance with legal requirements as an indispensable basis for demonstrating the integrity of the Group’s business activities so that Siemens is perceived by stakeholders as a trustworthy partner;
- sustainability management to promote responsible conduct at economic, environmental and social levels for the benefit of future generations;
- diversity management to support gender diversity and to support employees in various private and professional situations and help them meet the challenges in both their working and private lives; and
- initiatives to support a work-life balance, for example tax-free childcare subsidies and childcare places linked to employment contracts.

As in the previous year, no nonfinancial performance indicators were used during the 2019 fiscal year to manage the business.

An extremely important factor in Siemens Bank’s business performance was the re-confirmation of its credit rating by Moody’s credit rating agency in March 2019. In its credit opinion, Moody’s affirmed an unchanged long-term rating for Siemens Bank of A1 (stable outlook) and an unchanged short-term rating of P-1.
Trends in the economic environment

The project group Joint Economic Forecast of the Federal Ministry of Economics and Energy assumes in its economic forecast for the fall of 2019 that the global economy will continue to cool down. In its September 2019 economic survey, the Association of German Banks does not expect the global economic environment to improve in the short term, but expects economic development to bottom out from the 2020 calendar year onwards. The survey of the Association expects that the global economy will grow by 3.1% both in 2019 and 2020 (after a growth rate of 3.6% in 2018).

The forecasts unanimously show that developments will continue to be heterogeneous in Siemens Bank’s core markets. Growth in Europe is expected to continue to be subdued and gross domestic product will grow at rates of merely 1% on average. This also applies to the United King- dom, which is expected to leave the European Union in 2019 as part of Brexit. Significantly higher growth rates, albeit lower than in the past, are expected for Asia and Australia. Various forecasts expect average growth in gross domestic product in the region ranging at around 5%.

All forecasts stress a multitude of uncertainty factors and risks for the further economic development: Escalating trade conflicts and protectionist tendencies – especially the customs dispute between the U.S.A. and China – are dampering economic development, especially in developed and export-oriented economies. The resulting uncertainty is having a negative impact on the market for equipment investments. The lack of political agreement for a regulat- ed withdrawal of the United Kingdom from the European Union represents major political and economic risks for Europe in particular. Further uncertainties stem from politi- cal trouble spots such as Hong Kong or the Persian Gulf. The volatile development of oil prices due to political con- flicts and terrorism is also a disruptive factor in economic development. In addition, Asian markets in particular are frequently affected by natural catastrophes such as floods and earthquakes. It is also becoming apparent that regulary require- ments for banks within and outside the Europe- an Union will develop differently.

According to Siemens Bank’s assessment, current growth forecasts tend to be lower than those of the previous year and reflect a more skeptical mood than a year ago.

Opportunities and risks in the 2020 fiscal year

Siemens Bank shares the expectation that economic devel- opment will slow down in fiscal 2020 and that the stimulat- ing influence of the economy on business development will diminish, in particular in Europe. However, Siemens Bank believes that the demand for project finance and invest- ment loans, in particular in Asia, will remain on a level that is at least similar to that of the previous years, as the plan- ning cycles for infrastructure projects and project financing are usually longer. This also applies to the Middle East if it is strictly managed. We expect the increased pres- ence in Asia and Australia through the Singapore branch, the Bank sees additional development and growth oppor- tunities in the further expansion of its business activities in this region. Positive momentum is also expected to result from the consistent continuation of the lending business alignment towards attractive risk-return profiles and also from the income from the lending portfolio created up to now. Siemens Bank also expects positive development impul- ses from the strategic realignment of the Siemens Group and the associated development of new products and markets. Here, as in the past, the Bank intends to avoid exposure to excessive credit risk through a diversification with regard to regions and industries, and through consist- ent risk management.

Nevertheless, a series of elements of uncertainty and risk remain that Siemens Bank believes may lead to significant negative deviations from the forecasts. The further escalation of the U.-Chinese trade conflict represents a major economic risk both for export-oriented economies in Europe and for Asian economies. The resulting increased uncertainty may have negative impact on the demand for project and corporate financing and may restrict debtors’ ability to service their debt.

In Europe, a contractually unregulated withdrawal of Great Britain from the EU (“Hard Brexit”) has become very likely. In order to analyze and manage the effects of Brexit, Siemens Bank has initiated a separate project. Risks may arise primarily from EU regulations governing the opera- tion of EU business from the United Kingdom. Brexit may indirectly lead to increased credit risk if Siemens Bank cus- tomers are adversely affected by Brexit. In addition, rising volatility in the British pound may have a negative impact on interest margins. However, due to the business mod- el of the London branch, which is limited to the lending business, the Bank’s regional diversification and the broad operational base in both London and Germany, Siemens Bank does not expect Brexit to have material impact on the Bank’s business model and profitability.

Political and economic development in Turkey and the Middle East may have adverse impact on the debt servic- ing capacity of debtors. While Siemens Bank limits political risks primarily through credit insurance, the economic risks are managed through strict credit risk management. In addition to these risks, populism, protectionism and trade conflicts as well as terrorism as significant factors of uncer- tainty may have a negative impact on future economic development. Siemens Bank believes that another risk fac- tor lies in the persistently intensive competition in many regional markets for project and investment financing that is due to the historically low interest rate level and associ- ated high liquidity. This environment makes it increasingly difficult to generate attractive risk-return profiles.

However, given the Bank’s broad diversification of business across industries and regions and its consistent and com- prehensive risk management system, Siemens Bank contin- ues to believe that it will be able to offset any adverse or negative effects and uncertainties in some markets, at least in part – with positive effects in other markets.

Business performance of Siemens Bank in 2020

After a successful 2019 fiscal year in a challenging environ- ment, Siemens Bank expects further growth of its lending portfolio for 2020, and, associated with this, a further sig- nificant increase of its profitability before risk provisions.

For the coming 2020 fiscal year, Siemens Bank expects the liquidity investments included in the loans and advances to banks, customers and central banks, and, associated with this, the short-term deposits of Siemens AG and its subsid- iaries to remain on a comparable level. However, Siemens Bank believes that further growth in loans and advances to customers in the lending business – which, however, is expected to be significantly below the growth rates of the 2019 fiscal year – will have stronger influence on business volume and net interest income. The lending portfolio built up to date and the planned further expansion of business activities in Asia from the Singapore branch should have a positive effect on Siemens Bank’s net interest income and lead to a significant increase in net interest income. How- ever, Siemens Bank sees risks in forecasting the future development of net interest income at the interest margins that can be generated continue to be under pressure due to high liquidity in the lending markets and intense competi- tive pressure. Siemens Bank expects that its refinancing in the 2020 fiscal year will continue to be provided largely by Siemens AG and its subsidiaries.

Siemens Bank is not planning any material changes to the risk management services for Siemens AG and its subsidiar- ies, all of which are provided by Siemens Bank. However, for technical reasons, the income from the fee business will increase disproportion- ately, as Siemens Bank only took over risk management activities from Siemens Treasury GmbH in the course of fiscal 2019. Therefore, the Bank expects the business pillar fee business, and thus net fee and commission income, to grow again and clearly exceed last year’s level. However, the earnings contribution will continue to be of secondary importance for the earnings position of Siemens Bank. Administrative expenses relate firstly to the core lending business and the deposit and treasury business and thus to banking business in the narrower sense of the term. On the other hand, general administrative expenses relate to the rendering of services, in particular for Siemens AG and its subsidiaries. For the banking business in the narrower sense, Siemens Bank intends to again limit the increase in general administrative expenses for the 2020 fiscal year through strict cost discipline. This part of general adminis- trative expenses is expected to only grow as a result of general wage and price developments. In particular, gener- al administrative expenses are planned to only grow at a disproportionally low rate compared with the scope of business activity and the growth in net interest income. Siemens Bank does not expect any significant changes in the fee business. However, the administrative expenses attributable to the fee business will increase disproportion- ately for technical reasons, in line with the growth in net commission income. Siemens Bank therefore expects general administrative expenses to develop in line with net interest income.

Even though Siemens Bank will continue to only selectively enter into credit risk and does not intend to compensate for the current margin pressure on the credit markets by assum- ing excessive risks, the Bank believes that the contin- uing high level of uncertainty in key markets will result in a higher absolute level of allowances for losses on loans and advances compared with the 2019 fiscal year. This development will be affected both by the growth in busi- ness volume and by the risk structure of the portfolio. Siemens Bank expects that the provisions for expected losses will increase again compared to fiscal 2019, but will remain at a moderate level.

Overall, Siemens Bank expects that the positive effects from the growth of the lending portfolio and fee business will more than offset the increase in general administrative expenses and the higher additions to risk allowances, so that net operating income before income tax will again increase – even though this increase will be moderate com- pared with the previous year. For the return on risk-adjusted capital, Siemens Bank once more expects a target range of between 15% and 20%. However, as in previous years, the major uncertainty with regard to both performance indica- tors – also due to the Siemens Bank business model – is the development in provisions for loans and advances.

Notes to the financial statements
Notes to the financial statements
of Siemens Bank GmbH, Munich,
for the fiscal year from October 1, 2018
to September 30, 2019

Basis of accounting in the annual financial statements of Siemens Bank
Siemens Bank GmbH, Munich (hereinafter: Siemens Bank) is registered with the commercial register at the Local Court (Amtsgericht) of Munich, Germany, under HRB 185214. The annual financial statements of Siemens Bank for the fiscal year ending on September 30, 2019, have been prepared in accordance with the provisions of the German Commercial Code (HGB) and the German Accounting Regulation for Banks and Financial Services Institutions (RechKredV). The annual financial statements also comply with the provisions of the German Private Limited Companies Act (GmbHG).

The annual financial statements have been prepared in euros in accordance with section 244 HGB. For the purposes of clarity, amounts are shown in thousands of euros (€’000).

Pursuant to section 265 (8) HGB, any line items on the standard RechKredV forms that have remained blank have been omitted and the numbering has been adjusted accordingly to improve readability.

Due to rounding, individual figures in the annual financial statements may not add up exactly to the specified sum.

Accounting policies

Loans and advances to banks and customers
Loans and advances to banks and customers are reported under loans and advances to banks and customers, but are not included in the maturity-structure tables of assets and liabilities.

The risk allowances for losses in the lending business include both specific loan loss provisions and general loan loss provisions related to latent credit risks. Specific loan loss provisions continue to reflect, without modification, individual loan defaults expected in connection with a loan exposure at risk of default. General loan loss provisions are based on borrower credit ratings, residual maturities and rating-related probability of default, and the loss ratio in the event of a default. In the 2018 fiscal year, Siemens Bank further developed and refined the valuation parameters of the lending portfolio based on historical data and against the backdrop of increased uncertainty in the lending markets, in particular in order to take greater account of the expected portfolio losses. The adjustment of the valuation parameters led to a more cautious and thus higher valuation of the general loan loss provisions.

Irrevocable loan commitments are reported in the balance sheet as other obligations and valued at the maximum outstanding drawdown amount.

Debt instruments of public institutions and bills of exchange that are eligible as collateral with central banks
This item comprises securities issued by foreign government bodies that serve to manage liquidity and are measured strictly at the lower amount of cost and fair value.

Bonds and other fixed-income securities
The securities recognized under this line item are classified as current assets and are measured strictly at the lower amount of cost and fair value.

Trust assets and liabilities
Trust assets and liabilities are reported in accordance with RechKredV at their nominal value or repayment amount, in analogy to the respective balance sheet item.

Intangible assets
This item includes goodwill from the acquisition of a service business from Siemens Treasury GmbH, Munich. The acquisition value is calculated as the difference between the purchase price and the values of the assets and liabilities transferred. Depreciation is effected over 15 years in accordance with tax regulations in order to simplify the procedure.

Property and equipment
Property and equipment is measured at cost and reduced by depreciation on a straight-line basis over the estimated useful life of the property and equipment concerned. Movable fixed assets that can be used independently and whose individual cost is up to and including €250 (up until December 31, 2017: €150) are immediately expensed. Additions whose acquisition cost amounts to more than €250 (up until 31 December 2017: €150), but not more than €850 (up until December 31, 2017: €450) are capitalized and fully depreciated in the year of acquisition.

Cash and cash equivalents and other assets
Cash and cash equivalents, together with other assets, are carried at their nominal amounts.

Liabilities
Liabilities are carried at their settlement amounts as of the balance sheet date. Pursuant to section 11 RechKredV, interest obligations in connection with deposits from banks or amounts due to customers are reported under amounts due to banks or customers, but are not included in the maturity-structure tables of assets and liabilities.
Deferred taxes

On any differences between the valuation of assets, debts and prepaid expenses or deferred income under trade law provisions and under tax law provisions respectively, taking into consideration deductible losses and interest carried forward, a surplus of deferred tax liabilities is recognized if it is to be assumed that there will be a tax burden overall in future fiscal years. While a surplus of deferred tax liabilities is recognized separately in the balance sheet, a surplus of deferred tax assets is not recognized.

Provisions for pensions

Pension benefit obligations are measured at the settlement amount determined in accordance with the actuarial projected unit credit method based on biometric probabilities. Estimated future increases in salaries and pensions are factored into the calculation of the present value of the defined benefit obligation. The discount rate used in the calculation is based on the relevant rate published by Deutsche Bundesbank for a maturity of 15 years.

In order to determine the interest rate for the discounting of the provisions as of September 30, 2019, Siemens Bank, as in previous years, uses a 10-year average. Based on the existing profit-and-loss transfer agreement with Siemens AG, income from this adjustment is not subject to the dividend payout restriction.

Pursuant to the German Occupational Pensions Act (BetrAVG) and the UK Pensions Act 1995, Siemens Bank continues to be liable at a subsidiary level for pensions that are provided via an indirect route. If the relevant assets of the pension fund (or the Pensionskasse or Unterstützungskasse) fail to cover the settlement amount for the associated pension commitments, Siemens Bank covers the shortfall by recognizing a provision under provisions for pensions and similar obligations.

Netting of assets and liabilities, income and expense

Assets whose sole purpose is to satisfy pension obligations or residual partial retirement obligations and that cannot be the subject of a claim by any other creditors are measured at fair value. Income and expenses associated with these assets are netted with the interest cost in connection with the unwinding of the corresponding obligations and are reported under general administrative expenses, social security, post-employment costs and other employee benefit costs and under other operating expenses. In addition, these assets are offset against the corresponding underlying obligation. If this results in a surplus obligation, this obligation is reported under provisions. If the value of assets exceeds the obligations, the amount is reported as an excess of plan assets over pension liabilities.

Provisions for taxes and other provisions

Provisions are recognized in accordance with tax law to cover current taxes.

Provisions are reported at the settlement amount that is appropriate according to diligent commercial judgement. Provisions include individual appropriate and adequate provisions for all identifiable risks arising in connection with contingent liabilities and for imminent losses arising from pending transactions, taking into account estimated future increases in prices and costs. Non-current provisions (i.e. provisions with a maturity of more than one year), if material, are discounted using the average market discount rate applicable to amounts of equivalent residual maturity. This market discount rate is determined and published by Deutsche Bundesbank. Interest income and interest expense in connection with discounting and unwinding the discount on provisions are reported under other operating income and expense because they are unrelated to banking operations.

For all interest-rate-related financial instruments in the banking book, Siemens Bank provides evidence – in accordance with the principle of loss-free valuation – that no losses will be incurred in the future from contracted interest-rate positions. This is done by comparing the net present value of the banking book with its net carrying amount, taking into consideration expected losses and present-value general administrative expenses from the resolution of the existing portfolio. If the net carrying amount is greater than the net present value, there is a requirement for the recognition of a corresponding provision. As in the previous year, there was no requirement as of September 30, 2019, for the recognition of a provision for onerous contracts pursuant to section 340a HGB in conjunction with section 249 (1) sentence 1 HGB.

Currency translation

Amounts denominated in foreign currency are translated at the mean rate on the balance sheet date in accordance with section 256a HGB in conjunction with section 340h HGB. Current receivables and liabilities (i.e., due within one year) are translated with any differences being recognized in the income statement.

Siemens Bank also makes use of the concept of specific coverage for the measurement of amounts denominated in foreign currency. If assets and liabilities denominated in a foreign currency are subject to specific coverage, any associated income or expense arising from currency translation is recognized in the income statement. Assets that are not subject to specific coverage and liabilities with a maturity of more than one year are measured in accordance with the imparity principle.

Assets denominated in foreign currency are documented as specifically covered if they are matched by a countervailing liability or derivative in the currency concerned. Maturity mismatches are deemed to be permissible as long as there is the possibility and intention of entering into subsequent hedging deals. Only items eligible for specific coverage that are to be settled in cash may be included in the specific coverage arrangements. Any surplus from this measurement process is recognized under other assets or other liabilities. Any currency translation gain or loss is reported under other operating income or expense.

Derivative financial instruments

Siemens Bank only enters into derivative Financial instruments to cover risks arising in connection with its banking business. Embedded floors result from minimum limits for interest agreed in loan agreements with variable interest rates. As far as possible, currency-related transactions are accounted for as part of the specific coverage arrangements. Short-term interest-rate-related transactions are measured and recognized using the imparity principle because no designation to accounting groups (Bewertungseinheiten) as defined by HGB can be demonstrated. For loan terms of one year or more, interest-related hedging deals are incorporated on a regular basis into HGB accounting groups.

All derivative financial instruments are measured at their fair values. Siemens Bank only uses generally accepted measurement methods and measurement parameters observable in the market for this measurement.
Income statement disclosures

1 Geographical breakdown and net interest income
The breakdown of the total amount for net interest income, fee and commission income, and other operating income by customers based in Germany and by customers based elsewhere is as follows:

<table>
<thead>
<tr>
<th></th>
<th>2019</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Germany</td>
<td>9</td>
<td>9</td>
</tr>
<tr>
<td>Elsewhere</td>
<td>91</td>
<td>91</td>
</tr>
<tr>
<td>of which EMEA region (Europe, Middle East, Africa)</td>
<td>71</td>
<td>75</td>
</tr>
<tr>
<td>of which AA region (Asia and Australia)</td>
<td>20</td>
<td>16</td>
</tr>
</tbody>
</table>

Negative interest included in the interest income and positive interest included in the interest expenses are disclosed separately in the income statement in the form of a sub-item, including prior-year figures. They result mainly from refinancing transactions with the shareholder and from liquidity investments. For the Siemens Bank lending book, negative interest is of minor significance due to the structure of the terms and the geographical diversification.

2 Fee and commission income
Fee and commission income is derived from the following services:

<table>
<thead>
<tr>
<th>Service</th>
<th>€’000</th>
<th>2019</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Risk management and processing services for affiliated companies</td>
<td>28,224</td>
<td>25,174</td>
<td></td>
</tr>
<tr>
<td>Risk management services and credit business services for third parties</td>
<td>1,238</td>
<td>827</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>29,462</td>
<td>26,002</td>
<td></td>
</tr>
</tbody>
</table>

3 Other operating income and expense
Other operating income mainly includes the €1,140 thousand profit from currency translation (previous year: loss from currency translation of €1,267 thousand in other operating expenses). In the previous year, other operating income resulted from the reversal of other year-end provisions.

Other operating expenses largely comprise expenses from unwinding the discount on provisions and in connection with additions to certain provisions. Expenses from unwinding the discount on provisions amounted to €1,166 thousand (previous year: €795 thousand).

4 Taxes on income
For both income tax and VAT purposes, the German activities of Siemens Bank form an integral part of the tax group of Siemens AG, Berlin and Munich (hereinafter: Siemens AG). Taxes on income for German activities therefore only include capital gains and foreign withholding taxes charged.

The London branch of Siemens Bank forms part of the income tax group of Siemens plc, Frimley (United Kingdom). Due to the different design of the income tax group structure in the United Kingdom, taxes on income include payments and additions to provisions for current income taxes as well as €556 thousand for prior years.

The Singapore branch does not form part of an income tax group. In addition to deferred taxes, taxes on income also include payments and additions to provisions both for current income taxes as well as €582 thousand for previous years.

Deferred taxes for the London branch result mainly from valuation differences between the annual financial statements according to the HGB and the tax balance sheet according to English tax law for receivables, pension assets, provisions and liabilities. As of September 30, 2019, this results in a surplus of deferred tax assets. The option to recognize deferred tax assets is not exercised by Siemens Bank.

The Singapore branch shows a surplus of deferred tax liabilities of €40 thousand as of September 30, 2019, which results mainly from valuation differences between the annual financial statements according to the HGB and according to the tax law in Singapore for receivables, provisions and liabilities. In the previous year, the branch reported a surplus of deferred tax assets that was not recognized in the balance sheet.

As of September 30, 2019, there is a surplus of assets for the parent company, which is transferred to the controlling company Siemens AG.

The valuation of deferred taxes is based on a tax rate of 17.0% in the United Kingdom and 13.5% in Singapore.

5 Profit transferred under a profit-and-loss transfer agreement
Siemens Bank has a profit-and-loss transfer agreement with Siemens AG, its sole shareholder. Under this profit-and-loss transfer agreement, the entire net income after tax determined in accordance with HGB, amounting to €81,420,616.04, is transferred to Siemens AG.
Balance sheet disclosures

6 Debt instruments of public institutions and bills of exchange that are eligible as collateral with central banks
This item comprises unlisted, short-term treasury bills with a residual maturity of less than one year.

7 Loans and advances to banks

</table>

Loans and advances to customers include loans and advances to affiliated companies with a value of €245,677 thousand (previous year: €339,534 thousand). As in the previous year, this item does not include any receivables from the shareholder.

9 Bonds and other fixed-income securities
This item consists of listed corporate bonds acquired by Siemens Bank as part of its lending business. The item has a residual maturity of more than one year.

10 Trust assets and liabilities
Trust assets and liabilities comprise loans and advances to customers and liabilities to customers denominated in euros with agreed maturities or notice periods.

11 Intangible assets
The changes in intangible assets over the 2019 fiscal year were as follows:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Of the amounts due to customers, €6,156,418 thousand (previous year: €5,449,529 thousand) is accounted for by transactions with affiliated companies. Within this total of amounts due to customers, an amount of €5,931,056 thousand is due to the shareholder (previous year: €5,198,060 thousand).

Siemens Bank has not pledged or transferred any assets as collateral for amounts due to customers.

Siemens Bank is a participating institution in the German banks’ compensation fund (Entschädigungseinrichtung deutscher Banken GmbH), Berlin.

**17 Other liabilities**

The breakdown of other liabilities is as follows:

<table>
<thead>
<tr>
<th>(£’000)</th>
<th>2019</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other liabilities</td>
<td>95,481</td>

<td>VAT liabilities and other items</td>
<td>3,950</td>
<td>2,232</td>
</tr>
<tr>
<td>Personnel-related obligations</td>
<td>2,278</td>
<td>597</td>
</tr>
</tbody>
</table>

Liabilities to the shareholder include the profit-and-loss transfer agreement. All other liabilities have terms of up to one year.
18 Provisions for pensions and similar obligations

Siemens Bank provides various forms of occupational pensions for the employees in Germany and in the United Kingdom whose employment contracts were transferred to Siemens Bank as part of the transfer of a business as well as for new employees. To fund these occupational pensions, Siemens Bank has covered its obligations partly by assets that are held externally in trust and subject to restricted access.

The majority of current employees at Siemens Bank in Germany participate in the Siemens defined contribution plan (BSAV – Beitragsorientierte Siemens Altersversorgung) launched in 2004. BSAV is a pension program covered by assets held in trust. For the most part, the benefits depend on the company’s contributions made to the scheme and on the investment income from these contributions, although the company guarantees a minimum return. A lower proportion of current employees still have legacy pension entitlements (known as transitional payments) that are based on the salary of the employee concerned.

In addition, Siemens Bank offers employees the option of participating in a voluntary deferred compensation scheme. The salary components deferred under this scheme are invested in fund units. The fund units are only used to cover the resulting pension obligations and are protected against claims from other creditors. These assets, which had a fair value determined using recognized valuation methods (stock market prices) of €842 thousand as of September 30, 2019 (previous year: €955 thousand) and a cost value of €691 thousand (previous year: €803 thousand), are therefore fully offset against the pension obligations up to the amount of these obligations. Income and expenses each in the amount of €146 thousand (previous year: €127 thousand) were netted.

In addition, on behalf of the employees at the London branch, Siemens Bank participates in the pension scheme operated by the Siemens Group for employees in the United Kingdom. Here, contributions are paid into a pension plan without any additional obligations for Siemens Bank. Where employees have been given further fixed pension entitlements in a few individual cases, these pension entitlements are covered directly by the Siemens Pensions Trust. Siemens Bank only has an indirect liability for these obligations if the resources of the Trust turn out to be inadequate to cover the pension obligations. The assets assigned to the Trust, which had a fair value determined using recognized valuation methods of €2,233 thousand (previous year: €1,813 thousand), are therefore fully offset against this pension obligation up to the amount of this obligation.

Siemens Bank has not assumed any pension obligations for the employees at the Singapore branch.

For the 2019 fiscal year, the total settlement amount for the pension provisions amounted to €15,120 thousand (previous year: €13,473 thousand), of which €2,408 thousand (previous year: €2,365 thousand) was accounted for by indirect obligations fully covered by assets. The actuarial measurement of the settlement amount was based on a number of variables including discount rates of 2.82% (10-year average) and 2.05% (seven-year average) respectively. Last year, the discount rates were 3.34% (10-year average) and 2.43% (seven-year average) respectively. Other variables used as a basis were a salary growth rate in Germany of 2.25% per annum (previous year: 2.25%) and a pension growth rate of 1.5% per annum (previous year: 1.5%). For employees at the London branch, a salary trend of 3.5% per annum (previous year: 3.7%) and a pension growth rate of 2.9% per annum (previous year: 3.1%) was used as a basis. Mortality tables developed specifically for the Siemens Group in fiscal year 2019 (Siemens Bio 2017) were used as the biometric calculation basis. These replace the 2005G guideline tables from Klaus Heubeck, which had been used to date and had been modified specifically for the Bank. The Heubeck RT 2018 mortality tables are not used because the Siemens-specific tables contain a better estimate of the mortality trend.

The adjustment of the discount rate from a 7-year average to a 10-year average results in a difference of €1,629 thousand (previous year: €1,784 thousand). Based on the existing profit-and-loss transfer agreement with Siemens AG, this income is not subject to the dividend payout restriction. In the context of determining the liabilities from the deferred compensation scheme, Siemens Bank exercised a look-in option for accrued profits. The exercising of this option constitutes an adjustment of the plan. The resulting income of €58 thousand (previous year: €41 thousand) was offset against free capital provisions in order to determine the dividend payout restriction.

19 Other provisions

The changes in other provisions over the 2019 fiscal year were as follows:

<table>
<thead>
<tr>
<th>(€’000)</th>
<th>Oct. 1, 2018</th>
<th>Transferred</th>
<th>Utilized</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other provisions</td>
<td>10,378</td>
<td>155</td>
<td>6,289</td>
</tr>
<tr>
<td>of which with maturities up to 1 year</td>
<td>8,297</td>
<td>691</td>
<td>6,289</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

<th>Oct. 1, 2016</th>
<th>Transferred</th>
<th>Utilized</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other provisions</td>
<td>-322</td>
<td>5,682</td>
<td>10,378</td>
</tr>
<tr>
<td>of which with maturities up to 1 year</td>
<td>-322</td>
<td>4,741</td>
<td>8,297</td>
</tr>
</tbody>
</table>

Transfers mainly result from the assumption of personnel-related obligations taken over in the course of transfers of employees within the Group, or from changed maturities of long-term provisions.
Other provisions are recognized mainly for personnel-related obligations, such as variable income components, outstanding vacation entitlements and long-service bonuses.

<table>
<thead>
<tr>
<th>(€’000)</th>
<th>2019</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other provisions</td>
<td>14,449</td>

<td>2,309</td>
<td>0</td>
</tr>
<tr>
<td>Provisions for year-end costs</td>
<td>1,721</td>
<td>262</td>
</tr>
</tbody>
</table>

Provisions related to lending business result from the recognition of obligations from guarantees.

20 Equity

As last year, there were no changes to the components of equity in the 2019 fiscal year. Due to plan adjustments of the pension plans from deferred compensation schemes, €58 thousand of the capital provisions are subject to a payout restriction (previous year: €41 thousand).

21 Assets and liabilities denominated in foreign currency

Siemens Bank has assets and liabilities denominated in foreign currency in the following amounts:

<table>
<thead>
<tr>
<th>(€’000)</th>
<th>2019</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assets denominated in foreign currency</td>
<td>4,150,974</td>
<td>3,736,394</td>
</tr>
<tr>
<td>Liabilities denominated in foreign currency</td>
<td>4,136,119</td>
<td>3,731,737</td>
</tr>
</tbody>
</table>

22 Off-balance-sheet transactions

Siemens Bank grants irrevocable loan commitments as part of project finance or lines of credit in order to satisfy the financing needs of its customers. Commitments that have not yet been drawn down by customers and that cannot be revoked by Siemens Bank are reported below the line on the balance sheet.

Siemens Bank has contingent liabilities arising from lines of credit it has granted to customers for the issue of guarantees. Under these guarantee credit facilities, Siemens Bank must make payments to the beneficiary if the Siemens Bank customer fails to meet its obligations. There is no way of knowing whether or when a payout might be required, or what the amount of any payout might be. The maximum potential amount of claims is therefore reported below the line on the balance sheet.

23 Derivative financial instruments

Siemens Bank held the following derivatives as of September 30, 2019:

<table>
<thead>
<tr>
<th>Nominal amount</th>
<th>£1 year</th>
<th>&gt;1 – 5 years</th>
<th>&gt; 5 years</th>

</tr>
<tr>
<td>FX swaps</td>
<td>0</td>
<td>-23</td>
</tr>
</tbody>
</table>
In fiscal 2019, Siemens Bank fully hedged a fixed-interest deposit and several promissory note loans with a total volume of €203,000 thousand against interest-rate-induced market risks by means of interest rate swaps OTC for a period of up to three years, and designated these hedges as an HGB accounting group. These accounting groups were used to hedge valuation effects from interest-rate risks amounting to €2,910 thousand (previous year: €391 thousand). The effectiveness of the accounting group is proved by a comparison of the interest-induced changes in market value. For recognition, Siemens Bank has applied the net hedge presentation method, according to which the ineffective part of the accounting group is to be recognized using the imparity principle. For this, Siemens Bank recognized provisions for onerous contracts amounting to €228 thousand (previous year: €0 thousand), which are recorded under other provisions as a component of the provisions for year-end costs. In the previous year, Siemens Bank had incorporated a fixed-interest deposit and an interest rate swap in the amount of €78,000 thousand each into one accounting group; no provision for onerous contracts had to be recognized. This accounting group was continued in the 2019 fiscal year.

For short-term interest swap transactions OTC that are not incorporated into accounting groups, Siemens Bank recognized provisions for onerous contracts amounting to €796 thousand (previous year: €107 thousand), which are also recorded under other provisions as a component of the provisions for year-end costs.

### 24 Other financial obligations

Other financial obligations for the following years amount to €28,958 thousand (previous year: €19,527 thousand). These mainly relate to obligations arising from purchase and outsourcing agreements as well as from rental agreements. This amount includes obligations to affiliated companies in the amount of €25,868 thousand (previous year: €19,038 thousand).

### 25 Employees

Siemens Bank employs staff at its offices in Munich, Nuremberg, Erlangen, London and Singapore. Average employee numbers were as follows:

### 26 Members of the Management Board and Supervisory Board

The following persons have been appointed as managing directors:

- Roland Chalons-Browne, Chairman and Chief Executive Officer of Siemens Bank
- Dr. Ingeborg Hampl, member of the Management Board, Chief Risk Officer, up until July 30, 2019, also Chief Financial Officer of Siemens Bank
- Dr. Christoph Baumgarten, since July 1, 2019, member of the Management Board and Chief Financial Officer of Siemens Bank

Roland Chalons-Browne did not receive any remuneration for his activities in the 2019 fiscal year.

A Supervisory Board in accordance with the statutes has been established with the following members:

- Veronika Bienert, member of the Management Board of Siemens Financial Services GmbH, Munich, and Chief Financial Officer of the Service Company Financial Services of Siemens AG,
- Dr. Peter Rathgeb, Chief Executive Officer of Siemens Treasury GmbH, Munich, and Corporate Treasurer of Siemens AG.

Veronika Bienert is the chair and Dr. Peter Rathgeb is deputy chair of the Supervisory Board. Neither acting nor retired members of the Supervisory Board received any remuneration or pension entitlements from Siemens Bank for their activities as Supervisory Board members in the 2019 fiscal year.

The Supervisory Board also performs the function of an audit committee.

In addition to his activities as CEO of Siemens Bank, Roland Chalons-Browne is also a member of the following supervisory bodies pursuant to section 340a (4) no. 1 of the HGB:

- Chairman of the Supervisory Board of RISICOM Rückversicherung AG, Gruenwald
- Chairman of the Board of Directors of Siemens Financial Services Inc., Iselin, New Jersey, United States
27  Membership in a corporate group
Siemens Bank is a wholly owned subsidiary of Siemens AG, Berlin and Munich, and is incorporated into the parent company's consolidated financial statements. The consolidated financial statements of Siemens AG are submitted for publication in the electronic German Federal Gazette (Bundesanzeiger). Pursuant to section 285 no. 21 of the HGB, Siemens Bank did not enter into any transactions in the year under review with related companies or individuals on terms that were other than on an arm's length basis.

28  Auditor’s fee
The auditor's fee for the 2019 fiscal year amounts to €322 thousand. The fee also includes the audit of the Singapore branch and relates entirely to audit services for the financial statements. In the previous year, the consolidated financial statements of Siemens AG included disclosures on the total fees paid to the independent auditors pursuant to section 285 no. 17 of the HGB.

29  Events after the balance sheet date
There were no significant events to report following the end of the fiscal year.

Munich, on December 4, 2019

Auditor’s Report

Independent Auditor’s Report

To Siemens Bank GmbH, Munich

Report on the audit of the annual financial statements and the management report

OPINIONS
We have audited the annual financial statements of Siemens Bank GmbH, Munich – which comprise the balance sheet as per September 30, 2019, and the income statement for the fiscal year from October 1, 2018, to September 30, 2019, and as well as the notes to the financial statements, including the presentation of the accounting and valuation methods. In addition, we have audited the management report of Siemens Bank GmbH, Munich, for the fiscal year from October 1, 2018, to September 30, 2019.

In our opinion, based on the findings of our audit,

» the attached annual financial statements comply in all material respects with the requirements of German commercial law applicable to business corporations and give a true and fair view in accordance with German generally accepted accounting principles and German commercial law of the net assets and financial position of the Company as of September 30, 2019, and of its results of operations for the fiscal year from October 1, 2018, to September 30, 2019; and

» the attached management report as a whole provides a correct view of the Company’s position. In all material respects, this management report is consistent with the annual financial statements, complies with German legal requirements and correctly presents the opportunities and risks of future development.

In accordance with section 322 (3) 1 HGB, we confirm that our audit has not led to any objections regarding the legal compliance of the annual financial statements and the management report.

KEY AUDIT MATTERS IN THE AUDIT OF THE ANNUAL FINANCIAL STATEMENTS
Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the annual financial statements for the financial year from October 1, 2018, to September 30, 2019. These matters were taken into account in the context of our audit of the annual financial statements as a whole and in forming our opinion thereon; we do not provide a separate opinion on these matters.

We identified the following as a key audit matter:

Basis for the audit opinions
We conducted our audit of the annual financial statements and of the management report in accordance with section 317 HGB and the EU Audit Regulation (No. 537/2014; hereinafter: “EU Audit Regulation”) and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (Institute of Public Auditors in Germany, IDW). Our responsibility under these rules and principles is further described in the “Auditor’s Responsibilities for the Audit of the Annual Financial Statements and of the Management Report” section of our audit opinion. We are independent of the Company in accordance with the requirements of European law and German commercial and professional law and have performed our other German professional responsibilities in accordance with these requirements.

In addition, in accordance with Article 10 (2f) of the EU Audit Regulation, we declare that we have not provided any non-audit services prohibited under Article 5 (1) of the EU Audit Regulation.

We believe that the audit evidence obtained is sufficient and appropriate to provide a basis for our audit opinions on the annual financial statements and the management report.

Identification and measurement of impaired loans and advances to customers

Facts
At €7,204 million (previous year: €6,494 million) or 93% (previous year 93%) of total assets, loans and advances to customers represent the largest asset item at Siemens Bank GmbH, Munich. The measurement of impaired loans and advances to customers and the assessment based on this of any necessary specific loan loss provisions is a key area in which management makes discretionary decisions. The identification of impaired loans and the determination of the lower fair value are subject to uncertainties and involve various assumptions and influencing factors, in particular with respect to the assessment of the counterparty’s financial position, expectations regarding the net selling prices of loan receivables in the market as well as the determination of fair values for collateral provided. Minor changes in the assumptions may lead to significant changes in the determination of fair values for collateral provided. Minor changes in the assumptions may lead to significant changes in the determination of fair values for collateral provided.

We have assessed the appropriateness and effectiveness of the Bank’s methodology of analyzing information on the financial position and the processes for calculating impairment loss – whether intentional or unintentional.

As part of the audit, we determined the “identification and measurement of impaired loans and advances to customers” to be a particularly important aspect of the audit because loans and advances to customers account for a very high proportion of the balance sheet total of Siemens Bank GmbH, Munich, and the assessment of the recoverability of loans and advances to customers and the appropriate recognition of specific loan loss provisions are to a large extent based on assessments and assumptions of the legal representatives.

The Company’s disclosures on the identification and measurement of impaired loans and advances to customers are presented in “Accounting policies, loans and advances to banks and customers”.

Auditor’s response
We have assessed the appropriateness and effectiveness of the internal control system with respect to the material lending processes with accounting relevance. The focus here was on the processes for calculating impairment losses, the processes for recognizing payment arrears and the process of analyzing information on the financial position of borrowers.

In addition, we performed audit procedures relating to specific declarations on the basis of a risk-oriented selection and of a supplementary sample check, and assessed the appropriateness of the calculation of specific loan loss provisions. The risk-oriented selection included in particular the loans subject to intensified obligo management and problem obligo management.

In detail, we retraced the key assumptions in the context of the process of determining loan loss provisions. This included reviewing individual estimates of expected future cash flows, including cash flows from the realization of loan collateral. The effects of extension agreements were also taken into account. In the course of our audit, we assessed the competence, abilities and objectivity of the experts employed by the Bank. We retraced the assumptions underlying the external measurement reports for collateral and assessed their justifiability and the appropriateness of the measurement method used. We compared the data of Siemens Bank GmbH, Munich, with the underlying contractual data in order to assess the legal validity of real and personal collateral provided.

OTHER INFORMATION
The legal representatives are responsible for the other information. Other information includes:

- the report by the management on the course of business in the introduction to the 2019 financial statement of Siemens Bank GmbH, Munich.

Our opinions on the annual financial statements and on the management report do not cover such other information and, accordingly, we do not express an opinion or any other form of audit conclusion thereon.

In connection with our audit, our responsibility is to read the other information and, in doing so, to consider whether the other information

- is materially inconsistent with the annual financial statements, with the management report or our findings obtained in the audit, or
- otherwise appears to be materially misstated.

Responsibilities of the legal representa- tives and of the supervisory board for the annual financial statements and the management report
The legal representatives are responsible for the prepara- tion of the annual financial statements in accordance with German commercial law applicable to business corpora- tions, and for these annual financial statements giving a true and fair view in all material respects of the net assets, financial position and results of operations of the Company, in accordance with German generally accept- ed accounting principles. In addition, the legal representa- tives are responsible for the internal controls that they have determined to be necessary in accordance with German generally accepted accounting principles to enable the preparation of annual financial statements that are free from material misstatements – whether intentional or unintentional.

In preparing the annual financial statements, the legal representatives are responsible for assessing the Compa- ny’s ability to continue as a going concern. They are also responsible for disclosing matters relating to the continu- ing existence of the entity, if relevant. In addition, they are responsible for rendering accounts on the basis of the going concern assumption, except to the extent that this is contrary to fact or law.

In addition, the legal representatives are responsible for the preparation of the management report, which as a whole provides a true and fair view of the Company's position and is consistent with the annual financial statements in all material respects, complies with German legal require- ments and correctly presents the opportunities and risks of future development. The legal representatives are also responsible for the presentation and measures (systems) that they have deemed necessary to enable the preparation of a management report in accordance with the applicable German legal provisions and to provide sufficient suitable evidence for the statements in the management report.

The supervisory board is responsible for overseeing the Company’s reporting process for the preparation of the annual financial statements and of the management report.

Auditor’s responsibility for the audit of the annual financial statements and the management report
Our objective is to obtain reasonable assurance as to whether the annual financial statements as a whole are free from material misstatements – whether intentional or unintentional – and the management report as a whole provides a true and fair view of the Company’s position and is consistent, in all material respects, with the annual financial statements and the findings of our audit, complies with German legal requirements and correctly presents the opportunities and risks of future develop- ment, and to issue an opinion that includes our audit report on the annual financial statements and the management report.

Reasonable assurance means a high level of assurance, but does not constitute a guarantee that an audit conducted in accordance with section 317 HGB and the EU Audit Regula- tion and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW) will always reveal any material misstatement. Misstatements may result from violations or inaccuracies and are considered material if they cannot reasonably be expected that they will individually or collectively influence the economic decisions of recipients made on the basis of these annual financial statements and the management report.

During the audit, we exercise due discretion and maintain a critical basic approach. In addition

- we identify and evaluate the risks of material misstatement – whether intentional or unintentional – in the annual financial statements and management report, plan and perform audit procedures in response to those risks, and obtain audit evidence sufficient and appropri- ate to provide a basis for our audit opinions. The risk that material misstatements will not be detected is greater for violations than for inaccuracies, as violations may involve fraudulent collusion, falsification, intentional incompleteness, misrepresentation, or the overriding of internal controls.

- we gain an understanding of the internal control system relevant to the audit of the annual financial statements and of the precautions and measures relevant to the audit of the management report in order to plan audit procedures that are appropriate in the circumstances.

However, this is not done for the purpose of expressing an opinion on the effectiveness of those systems.

- we evaluate the appropriateness of the accounting methods used by the legal representatives as well as the reasonableness of accounting estimates made by the legal representatives and of the related disclosures.

- we draw conclusions about the appropriateness of the going concern accounting principle applied by the legal representatives and, on the basis of the audit evidence obtained, whether there is any material uncertainty in connection with events or circumstances that may cast significant doubt on the Company’s ability to continue as a going concern. Should we reach the conclusion that there is material uncertainty, we are obligated to call attention in our audit opinion to the related information in the financial statements and management report or, if such information is inappropriate, to modify our relevant audit opinion. We draw our conclusions on the basis of the audit evidence obtained up to the date of our audit opinion. Future events or circumstances may, however, result in the Company no longer being able to continue as a going concern.

- we express an opinion on the overall presentation, structure and content of the annual financial state- ments, including the disclosures, as well as on whether the annual financial statements present the underlying transactions and events in such a way that the annual financial statements give a true and fair view of the Com- pany’s net assets, financial position and results of opera- tions, in accordance with German generally accepted accounting principles.

Auditor's Report
» The supervisory board is responsible for overseeing the Company’s reporting process for the preparation of the annual financial statements and of the management report.

» The recognition and measurement processes for impaired loans and advances to customers are in principle subject to uncertainties and involve various assumptions and influencing factors, in particular with respect to the assessment of the counterparty’s financial position, expectations regarding the net selling prices of loan receivables in the market as well as the determination of fair values for collateral provided. Minor changes in the assumptions may lead to significant changes in the determination of fair values for collateral provided. Minor changes in the assumptions may lead to significant changes in the determination of fair values for collateral provided.

» As part of the audit, we determined the “identification and measurement of impaired loans and advances to customers” to be a particularly important aspect of the audit because loans and advances to customers account for a very high proportion of the balance sheet total of Siemens Bank GmbH, Munich, and the assessment of the recoverability of loans and advances to customers and the appropriate recognition of specific loan loss provisions are to a large extent based on assessments and assumptions of the legal representatives.

» The Company’s disclosures on the identification and measurement of impaired loans and advances to customers are presented in “Accounting policies, loans and advances to banks and customers”.

Auditor’s response
We have assessed the appropriateness and effectiveness of the internal control system with respect to the material lending processes with accounting relevance. The focus here was on the processes for calculating impairment losses, the processes for recognizing payment arrears and the process of analyzing information on the financial position of borrowers.

In addition, we performed audit procedures relating to specific declarations on the basis of a risk-oriented selection and of a supplementary sample check, and assessed the appropriateness of the calculation of specific loan loss provisions. The risk-oriented selection included in particular the loans subject to intensified obligo management and problem obligo management.
we assess the consistency of the management report with the annual financial statements, its legal compliance and the overall view of the Company’s position conveyed by it.

» we perform audit procedures on the prospective information presented by the legal representatives in the management report. On the basis of sufficient and appropriate audit evidence, we particularly verify the significant assumptions used by the legal representatives as a basis for the prospective information, and assess the proper derivation of the prospective information from these assumptions. We do not issue an independent opinion on the prospective information or on the underlying assumptions. There is a substantial unavoidable risk that future events will differ materially from the prospective information.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with the relevant independence requirements, and communicate with them regarding all relationships and other matters that may reasonably be assumed to affect our independence, as well as regarding the related safeguards taken.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the annual financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor’s report unless law or regulation precludes public disclosures about the relevant matter.

FURTHER INFORMATION PURSUANT TO ARTICLE 10 OF THE EU AUDIT REGULATION

We were elected as auditors by the annual general meeting on January 10, 2019. We were appointed by the Chairman of the supervisory board on March 13, 2019. We have been the auditors of the financial statements of Siemens Bank GmbH, Munich without interruption since fiscal 2018/19.

We declare that the opinions expressed in this auditor’s report are consistent with the additional report to the audit committee pursuant to Article 11 of the EU Audit Regulation (audit report).

In addition to the financial statement audit, we have provided to the Company or to entities it controls the following services that are not disclosed in the Company’s annual financial statements or management report:

» Confirmation services in connection with the audit pursuant to part V. no. 11 (1) of the General Terms and Conditions of the Bundesbank (confirmation relating to the credit claims submission (KEV) procedure)
